15. For an answer to this question I may be allowed to refer the Commissioners to the replies given by the several tutors in Table E. I may say, however, that in the sixth form, and generally in the fifth form, lessons are not construed to a tutor before they are heard in school.

16. In the case of tutors who are also masters of the larger houses, the number of their pupils is practically determined by the number of boarders in their houses. The maximum number in these houses ranges from 35 to 40. In one large house it is considered to be fixed at 45. The masters of the large houses may have a few additional pupils from the home-boarders, but the majority of these (a body of some fifty in all) are the pupils of the masters of the small houses, whose maximum number of pupils is considered to be fixed at 40.

Practically, 40 may be taken as a fair average number of pupils for each tutor.

The number of boys in the several forms is regarded as fixed, in the two divisions of the sixth form at 30, in the succeeding forms down to the upper fourth (inclusive) at 35, in the second fourth at 32, and in the third fourth (including also the third form) at about 22. Occasionally the divisions of the sixth form will contain 32 boys each, and the forms whose maximum number is 35 will occasionally contain 36 or even 37. This last number is scarcely ever exceeded.

The above numbers represent the number of boys who are heard at one time in school by the masters of the several forms.

17. Boys who enter the house of a classical assistant master become, *ipso facto*, the pupils of that master.

In the case of boys who board in the houses of the head master or of the mathematical masters it is usual for the master of the house, at the request of the boys' parents, to suggest the name of some tutor among the masters of the smaller houses. Should a parent desire to place his son under a particular tutor among such masters, his wish would as a matter of course be complied with, unless the number of that tutor's pupils were already complete.

The parents of home boarders generally select the tutor for their sons. In some cases they consult the head master.

18. If a boy shows a special aptitude for any branch of natural science, for English literature, for modern languages, or for knowledge of the Holy Scriptures, he would be urged and encouraged by his tutor to prepare for the periodical competitions for the prizes given for those subjects.

If a boy showed a special aptitude for mathematics, rather than for classical studies, he would probably be advised to read mathematics privately with one of the mathematical masters; and in some few instances, with the approval of the head master, a boy would be excused the whole or part of his verse composition in order to devote more time to mathematics. This exemption would generally, though not exclusively, be granted in favour of boys preparing for the Woolwich examinations.

Such cases of exemption, however, are very rare, and are by no means recommended. It is found in practice that

boys lose far more than they gain by being treated exceptionally. At a large school, where tradition and emulation act so powerfully, boys are not likely to work vigorously at any subject in which the majority of their companions are not keenly interested. It is too early to expect from them a strong and decided love of knowledge for its own sake, nor again are they in general much influenced by the consideration that what they are learning or neglecting to learn will affect their prospects in examinations for the army or the civil service.

They will throw themselves with fair energy into the regular work of the school, even where they have no special aptitude for it. If exempted from this regular work, or from any part of it, they are likely to become listless and idle.

19. At the universities, unquestionably; in the examinations referred to, certainly, so far as knowledge of the classics is required.

I should say also that a boy of good ability, competing for the Civil or East India services, ought, with the knowledge of mathematics, or modern languages which he can acquire at Harrow, to acquit himself so well in those branches of study, as with the help of his classical knowledge to ensure success.

At the same time we do not profess to prepare boys specially for these examinations; and I have no doubt that a Harrow boy would gain more marks in them, if during 3 or 4 months before the examination, he were to give up his classical reading, and confine himself to special preparation in mathematics, modern languages, and still more English literature.

I believe that we could not with advantage so curtail our classical instruction, as to leave room for this special preparation at Harrow.

In the case of boys preparing for the Woolwich examinations, in which the standard of mathematics is high, while a fair approximation to this high standard is, I believe, absolutely required, I should recommend special mathematical study away from Harrow for a year or at least six months.

20. With the permission of the Commissioners, I will defer my answer to this question for a few weeks longer. We have not hitherto kept any register of university honours gained by Harrow men; and the task of making an accurate list may occupy some time.*

21. There is a library called the "monitors' library," to which the monitors, that is, the 15 upper boys in the school, alone have access. If a boy lower in the school wishes to enter the library, he will ask a monitor to lend him his key; or if he wish to take out a book, he will request a monitor to take it out for him. It seldom happens that a boy below the sixth form will make this request.

I ought to add that a new, and very much larger library is in course of building. When it is completed, access to it will be less restricted, but the conditions are not yet determined.

I may state further that many of the boarding houses have "house libraries" attached to them under the management of the house master and the upper boys of the house. The books contained in them are freely used by all the boys of the house.

We have at present no collection of natural history, or apparatus for experiments in natural philosophy.

22. Neither music nor drawing form parts of the regular school work; but there are resident masters who receive private pupils in both of these subjects. The boys who take private lessons are expected to attend upon the master out of school hours twice every week, for about one hour each time.

The chapel choir consists of about 15 of the boys of the school, who practise for the chapel services twice a week, for about an hour each time, under the instruction of the organist and the music master.

In the course of the last few years a musical society has been established in the school, and is mainly managed by the boys themselves. Its members receive instruction, partly in vocal, partly in instrumental music twice every week from a teacher sanctioned by the head master, but paid by the society.

The subscription paid by each member is charged to his parents, after their consent and that of the master of his house has been obtained.

A public concert is given every school quarter by the members of the society.

I append copies of statements from Mr. Wood, the drawing master, and Mr. Tillyard, the master in music, containing replies as to the details with which the Commissioners desire to be furnished.

23. I must confess myself quite unable to answer this question in writing, with precision and with reasonable brevity. The replies to questions 24 and 27, will probably convey most of the information desired by the Commissioners. If any further explanation is required, I may perhaps be permitted to convey it orally.

24. All regulations on the points referred to depend not upon law but upon usage, and may be modified at any time at the discretion of the head master.

(1.) There are two sermons every Sunday in the school chapel. The morning sermons are preached by the clerical assistant masters in regular order. The evening sermon is, with very rare exceptions, preached by the head master. It has been customary to request the vicar of the parish to preach one sermon in the course of every school quarter. It is open to the head master to invite any other clergyman to preach either in the morning or the evening; but in practice this is very rarely done.

Once in every school quarter a sermon is preached, followed by a collection, for some missionary or other charitable object.

All the sermons preached in the chapel are presumed to be specially addressed to the boys; but it rests entirely with each preacher to determine how far the subject of his sermon shall be of special or of general interest.

(2.) A confirmation has hitherto been held in the chapel in every alternate year. The celebration would certainly never be less frequent: it would be open to the head master, with the consent of the Bishop of the diocese, to make it more frequent, if he should ever think it desirable to do so.

Notice of an approaching confirmation is generally given towards the close of the school quarter preceding that in which it is proposed that the confirmation should be held.

When the boys return after the intervening holidays, the names of all those who wish to be confirmed are received by their tutors, and through them transmitted to the head master.

Each tutor examines week by week such of his own pupils as are candidates; and at the close of every week an address is delivered in the chapel by the head master to all the candidates at once.

The head master also examines privately week by week, in classes and individually, such of the candidates as are in his own house; and he takes an opportunity of seeing once before the confirmation the candidates from each of the houses in separate bodies.

Immediately before the confirmation a revised list of the candidates is made out, from which the names of any who may have failed to obtain the sanction of their tutors or of the head master are excluded.

The confirmation would scarcely ever take place till at least six weeks of the school quarter had elapsed.

The minimum age of the candidates is fixed at 16. If any boy still younger desires to be confirmed, his case is considered separately by his tutor and the head master.

(3.) There are three services in the chapel on Sunday, at all of which the whole school are present.

At 8.30 A.M., the Communion service without the Sacrament.
11.0 A.M., the morning service, without the Communion service.
5.30 P.M., (in winter) } the evening service.
6.30 P.M., (in summer) }

There is also morning service at 8 A.M. on the first day of every school quarter, and on every saint's day.

There is full morning service at 11 A.M. on Ash Wednesday, Ascension Day, and the day of the Commemoration of the Founder.

There is evening service on the last evening (Monday) of every school quarter.

I may add that during Lent the school assemble in the chapel at 7.30 A.M., on the mornings of Wednesday and Friday, when the Litany, on the one day, and, on the other, part of the morning service is read. These services take the place of the morning prayers usually read in school.

The Holy Communion is celebrated at least twice, almost always three times, in every school quarter. On one at least of these occasions all boys who have been confirmed are invited to meet the head master in the chapel on the Saturday evening, when he delivers a short address to them bearing on the morrow's solemnity.

Attendance at the Holy Communion is in no respect compulsory, nor is it registered. If, however, any boy who had been confirmed were observed to be habitually absent, his tutor, or the head master, would take an opportunity of remonstrating with him privately.

(4.) Besides attending at the three services which I have mentioned above, all the boys are required to attend school for one hour, at 3.15 P.M. The subject of the lesson is some part of Holy Scripture. The lesson prepared on Sunday evening for the following morning is of the same kind.

The only other detailed observance of Sunday which seems to call for notice, is that the boys are strictly for-

* See list, subsequently furnished, appended to these Answers, p. 282.

ANSWERS.
HARROW.
Rev. H. M. Butler.

bidden to stand about the street, or outside their houses, in knots on that day.

(5.) Except at the time of preparation for confirmation, a tutor would not naturally offer any direct religious instruction to his pupils.

I have already referred, in answer to question 13, to the examination in Holy Scripture for the Beaumont prizes, and to the help which a tutor would probably give to his pupils in preparing for this voluntary examination.

The lessons in religious knowledge given in school by the masters of the several forms are on Sunday and at first school, 7.30 to 9 o'clock, on Monday morning. The lessons of course vary with the different forms. In every form, on the Monday morning, some portion of Holy Scripture is repeated by heart.

At the end of every school quarter a "divinity paper," bearing on the school work of the quarter, forms part of the examination of each form.

25. There is no absolute uniformity. Each master is at liberty to determine for himself the punishment which he awards for any particular offence.

There are, however, some common offences, as, for example, being turned back in a lesson, the punishments for which do not greatly vary throughout the school.

The ordinary punishment for being turned back in a construing lesson would be to write out and translate the lesson.

Speaking generally, punishments are a given number of written Latin lines, varying from 50 to 500. It would very seldom happen that a single punishment of more than 500 lines was awarded.

During the last few years it has been customary to punish boys in certain cases by sending them to what is called "extra school."

Three times a week, on the afternoons of half-holidays, boys who are sent to "extra school" sit for an hour and a quarter in one of the schoolrooms, in the presence of a master, writing out grammar as a punishment.

A book is kept in which the names of all the boys thus punished are on each occassion entered; the master who sends the boy specifying in each instance his offence, and the number of times, if any, that he has been previously punished in the same way.

This book is regularly submitted to the head master.

"Extra school" is a punishment resorted to in general, though not exclusively, for offences of *aggravated neglect*. It is the punishment next below being "sent up," and tends to diminish the number of punishments which it would otherwise fall to the head master to award.

My own method of punishment I have explained in my answer to the following question.

26. The offences that come before me as head master may be divided into two classes differing essentially from one another.

(1.) Boys who are late for chapel, or absent from chapel, or absent from the "bills," that is, absent when the names of the boys are called over on holidays, are brought before me.

Boys late for chapel receive uniformly a punishment of 300 lines to be brought to me.

Boys absent from chapel in the morning receive uniformly a punishment of 500 lines to be brought to me.

Boys absent from a bill are always questioned by me as to the cause of their absence. If I am satisfied that their absence arose from neglect alone, and not from any wilful design, the punishment that they receive is 300 or 400 lines.

(2.) There are the cases of boys who are "sent up" to me by other masters, or are detected by myself in some serious offence.

It is of course left to the discretion of the masters to decide when a boy must be "sent up" to me. In general there is a strong feeling among us that the more this can be avoided, the better.

There are, however, certain offences which would almost invariably cause a boy to be sent up. Such are falsehood, gross or profane language, misbehaviour in chapel, drinking, being seen in a public house, communicating with any known bad character in the town, gambling, smoking, a gross act of bullying, copying from another boy in the examination, "unfairness" or "dishonesty" in school, *e. g.* from taking in a concealed Euclid or translation.

When a master detects a boy in one of these offences, he will write his name on a piece of paper, specifying the offence but not giving details, and send it to me by the "monitor" for the time being, *i. e.*, a young boy in one of the lower forms. If I observe that the tutor of the boy has attached his signature to the paper as a proof that he is cognizant of his pupil's offence, I countersign it, adding in writing my directions that the offender shall come to me "with the monitor" at a specified time, generally immediately after first or fourth school.

When he appears, the "send-up" paper is again laid before me, and I copy the boy's name, with the charge laid against him, into a book which I keep for that purpose. I then tax the boy with the offence, assuming, as a matter of course, that he has unquestionably committed it. If, however, he denies it, or has some plausible explanation, I dismiss him for the time without punishment, and take an early opportunity of consulting the master who sent him up. It frequently happens that a master accompanies the "send up" paper with a note explaining in detail the circumstances of the offence; or, if the offence is a very serious one, the master will in all probability consult me privately before he sends the offender to me.

For any of the rare offences specified above, a young boy below the fifth form would probably be flogged. If high in the school, he would either receive from me a very serious warning, or bring to me privately, at my house, every day, for a fixed or an indefinite period, some written punishment, or be degraded, either out of his form or to a lower place in it; or, lastly, if the offence were very grave, be sent away.

Other offences for which a boy might be sent up are constant neglect, constant idleness, impertinence to a master, disorder at the calling of "bill," wilful absence from school, throwing stones, &c.

If a boy came before me for one of this class of offences I should hardly ever decide to flog him for the first time, but should think it better merely to register his offence, and to give him some punishment of a few lines (say 30 or 50), to be brought to me every hour or every half hour on a holiday, or on two or more holidays, or sometimes till further notice. This latter punishment I should think suitable to the case of a boy who had been habitually late or absent, or in some manner neglectful.

Whenever a boy is "sent up" to me I take the whole punishment into my own hands, though I sometimes (rarely) require him to bring me for some short time to come the signature of the master at the close of a week, in token that his conduct has been more satisfactory.

Corporal punishment is inflicted only by the head master. In deciding to inflict it, or to substitute some other punishment, I take into account the age of the offender, and also his position in the school. It very rarely happens that I decide to flog any boy in the fifth form; in other words, any boy from the first 200 boys of the school.

27, 28, 29, 30. The Commissioners will allow me to answer these four questions together.

All the boys in the two divisions of the sixth form, that is, the first 60 boys in the school, have the privilege of fagging.

All boys below the fifth form, excepting the three or four composing the third form, are liable to be fagged; though any boy who may have been a fag for three years becomes, *ipso facto*, exempted.

Every member of the sixth form is invested with a certain degree of responsibility, more particularly, though the distinction is not definitely marked, the members of the upper sixth form, who are heard in school by the head master, and come into close relation to him.

If any well known rule of the school were violated in the presence of a sixth form boy, still more if he were himself personally concerned in the violation, he would be held, both by the masters and by the school, to be culpable in a much higher degree than if he had been, say, in the upper fifth form.

It is, however, to the *monitors*, that is, the first fifteen boys of the school, that authority, and consequent responsibility, are most formally assigned. Their authority extends over the whole school, though they are not permitted to inflict personal chastisement in support of it on boys above the second division of the fifth form. No one below the monitors may inflict personal chastisement for any cause whatever, except the head boy of a large house, who is invested with monitorial authority over the members of that house. Without attempting to define accurately the duties of a monitor, I may say that he would be bound to keep reasonable order among the boys of his house, especially during the evening; to assist the master who calls the "bill" in school in maintaining quiet; to investigate and to punish any serious moral offence, as bullying, drinking, gross language or acts, &c.; or any violation of a well known school rule, as smoking, being in a public house, throwing stones in the street, &c.

If a very gross offence were discovered by a monitor, especially if committed by a boy high in the school, it would be his duty to report it to the head master. Practically, however, an instance of an offence being thus reported scarcely ever occurs, and I should earnestly discourage its becoming otherwise than most exceptional. It is far better for the school that the monitors should themselves deal with offences which they discover. A punishment inflicted by them, as the recognized representatives of the school, is in the great majority of cases of incomparably more value

than a punishment inflicted by any master. So strongly am I convinced of this, that if a monitor came to report a case to me I should request him, in the first instance, to state the facts without giving names, and should then offer him my advice as to whether it were better that he or I should deal with the offence.

If, again, an offence was brought to my notice of which, in my judgment, any particular monitor ought to have taken cognizance, I should, after myself dealing with it, point out to him privately the opportunity he had neglected.

As to the general question, whether it is desirable that the elder boys in a great school should be formally entrusted with some authority over the younger, I can only state in the most emphatic terms my own conviction that no great school could long live in a healthy state without it. The limits of the authority may vary, and the recognized means of maintaining it may vary, according to the traditions of each school; but I am satisfied that the only true way to govern boys is to train them to govern themselves. It is not merely that boys become aware of a thousand instances of misconduct, more or less serious, which a master can never detect without an amount of surveillance which would be fatal to all generous training; but independently of this, the knowledge on the part of the school at large that a certain portion of their own body, of which they hope some day to become themselves members, is charged to maintain right and to put down wrong, must have a most powerful moral influence in forming manly characters. They see justice done and evil discountenanced or punished by those who share their sympathies, whose standard of right and wrong is not so much above their own as to seem fictitious, and who represent in the main the ability and the physical strength of the school.

To the boys themselves who are trusted with authority, its exercise is invaluable as an instrument of education. It accustoms them, at an age when the thought of responsibility is a welcome as well as an elevating thought, to think for others; to be jealous for right; to see the purifying effect of a bold example; to be considerate and discriminating in forming judgments; to learn the value of decision; and to respect legitimate authority.

To one who knows a public school, it is almost an axiom that the possession of a recognized authority and responsibility by the upper boys is the main preservative of the younger from tyranny. What has been said above is, perhaps, sufficient to explain my own conviction of the truth of this assumption.

Instances of tyranny, or of excessive severity, on the part of a sixth form boy, are, to the best of my belief, exceedingly rare; and I am satisfied, from my experience, first as a boy educated at Harrow, and then as head master, that this belief is well founded. I remember a few quite exceptional instances of abuse of authority; and from the stir which these produced in the school, and from the fact that nothing of importance takes place among us without becoming the subject of universal comment among all connected with the school, I cannot doubt that an act of real cruelty on the part of an upper boy is sure to come to the knowledge of a master.

Practically, we are well aware that bullying is to be apprehended, not from the sixth form, who are the recognized protectors of the younger boys, but from strong and overgrown boys in the middle and lower parts of the school.

(29.) The power of fagging is, as I have said, exercised over boys below the fifth form. Besides being liable to be sent on messages by any member of the sixth form, the younger boys act as breakfast and tea fags (in the house), as cricket fags, and as racquet fags.

The breakfast and tea fags bring up the breakfast and tea things for the sixth form boy to whom they are appointed fags, and take them away again; the washing, &c. being done by servants. In some of the houses the whole of the above duty is done by the servants.

Every evening of the summer quarter a certain number of the boys in regular rotation are sent down to stop and run after the balls used by the sixth form, while practising cricket. This practising lasts from about 6.30 or 6.45 to 8, or 8.15.

In the same way, when a sixth form boy plays racquets, two fags are generally appointed to run after balls.

At football there is no regular fagging; but this game, which takes place on three afternoons of the week, lasting for about an hour and a half at a time, during the greater part of two school quarters, is compulsory on *all* the school below the upper fifth form, except on boys who have been three years at the school.

Boys who bring a medical certificate that football would be injurious to their health are exempted from attendance. Each of the monitors also has the right to exempt four boys on each football day, if he go down to the game on that day himself, and the head of the school can exempt as many as he thinks fit.

As to the general question of the effects of fagging, or compulsory attendance, at games, I have no doubt myself that they tend to give spirit and vigour to the school. There is always a considerable number of boys who, on first coming to the school are, from reserve or diffidence, shy of taking part in the school games. There are other indolent boys who are disposed to lounge about during the afternoons of holidays doing nothing. I think that both these classes of boys gain by being subjected to a certain degree of compulsion. So far as I am aware, instances of boys acquiring a distaste for a game in consequence of having been originally compelled to take part in it are very rare.

The medical certificates of which I have spoken are no doubt a sufficient security for health. The fact that the cricket fags and racquet fags are appointed, not arbitrarily or casually, but by fixed rotation, is a security against the little boys losing an evening unexpectedly, while the large number of the fags, some 250, prevents the compulsion from falling frequently on any particular fag.

I should say without hesitation that, making all allowance for the demands of fagging and compulsory attendance at football, the younger boys have ample time for as much study as can fairly be expected from them.

I ought, perhaps, to conclude what has been said on this subject, by explaining that fagging and compulsory attendance at football are parts of the internal government which was, so far as we know, originally established by the boys themselves, and is now certainly administered by them alone. For example, the monitors and not the masters see to the attendance of the school at football.

The existing system is conducted with the full knowledge and sanction of the masters, and would of course be modified to any extent if the head master saw reason to desire it. But it was not created by any master, nor does any master, except on rare occasions, interfere with its administration. Its value consists in its being in the main independent of the masters, though subject to their general control.

31. Thirty-eight weeks, unless an extra week has been added to one of the three vacations.

32. There are three vacations, lasting respectively, at Easter three weeks, at Midsummer six weeks, at Christmas five weeks.

The Easter holidays begin on the Tuesday in Passion Week; the Midsummer holidays begin on the last Tuesday in July or first Tuesday in August; the Christmas holidays begin on the first, second, or third (generally second) Tuesday in December.

It is open to the head master to alter the times of the holidays, should he see occasion to do so.

33. There are half holidays on Tuesdays, Thursdays, and Saturdays. For the sixth and fifth forms there is no work in school, or (necessarily) with a tutor, after nine o'clock on Tuesday morning. They have, however, exercises at which they will probably work during the forenoon of Tuesday.

Sometimes, at intervals generally of between two and three weeks, a Thursday or (more commonly) a Saturday, is converted into a whole holiday in honour of some special occasion; if, for example, a Harrow man has been appointed to some high post in the Church or the State, or if some one, lately a Harrow boy, has won some eminent distinction at the University.

34. The hours in winter and summer are the same.

First school begins at 7.30 in the morning.

The boys must be in bed by 10.30, or, if in the sixth form, by 10.45.

35. It varies in the different forms, and at the different seasons of the year. In summer, fourth school ends at 6 p.m., and is followed immediately by tea, which lasts from a few minutes to half an hour. The interval between this and locking up, which takes place at 8.30, is at the disposal of the boys for play.

Speaking generally, the time on "whole school days" most open for play to the whole school is the interval between dinner and third school, that is, from 1.30 to 3.30 in winter, 1.30 to 3 in summer. Part of this interval, however, must be devoted to preparation for third school, if the work required has not been prepared before.

The hour from 12 to 1 on "whole school days" can be devoted to play by a large part of the school.

36. About 12 acres for cricket; 46 acres for football; besides the considerable space occupied by the school yard and the two large racquet courts. Each court is 60 feet square. The school yard contains 961 square yards.

37. We have no covered ground or court of any considerable size.

The school yard is paved with a kind of asphalt, the racquet courts with stone.

38. The cricket ground and the football ground are grass fields, thoroughly open on all sides. Adjoining the school yard, but separated by a high wall, is an inn, which however has just become the property of the governors of

ANSWERS.

HARROW.

Rev. H. M. Butler.

the school, and will be pulled down or converted to some other use. It ceases to be an inn in April next.

39. Cricket, football, racquets, leaping and running for prizes, swimming.

A rifle corps has recently been formed in the school, and numbers from 100 to 200 members.

Fencing is learned by a few of the boys. Single sticks and boxing with gloves are practised in some of the houses, under the control of the upper boys.

40. The boys may go anywhere, provided they do not cross the railway in any direction. This restriction does not apply to the monitors.

They use their liberty to take walks. The game of "hare and hounds," which was formerly permitted, has been discontinued in consequence of difficulties raised by the farmers.

41. Fencing and (recently) the drill required for a volunteer rifle corps; also shooting with the rifle. Attention to these exercises is perfectly voluntary. There is a fencing master and a drill serjeant.

Swimming is not compulsory, nor is it systematically taught. Prizes, however, are given for it every year, and excite considerable interest among the boys.

42. The interest taken in the games is, I should say, universal throughout the school. There is no subject on which even the oldest and most intellectual boys are so eager to talk. A boy who was believed to take no interest in the favourite games, especially cricket, would, however distinguished, be somewhat looked down upon by his schoolfellows.

Further than this, I should say that though perhaps as a rule the boys *most* distinguished in the games, or at least at cricket, which requires unusual attention and practice, are not among those *most* distinguished for their progress in intellectual studies, yet a large proportion of the abler boys are always found among the best players. The influence of an able boy in the school is very greatly increased if he be also known as a good player at cricket or football.

I could not undertake to discriminate between different intellectual studies as indicators of a taste or distaste for games at school.

43, 44. The Commissioners will allow me to answer these important questions very briefly. From my replies to previous questions they will probably have gathered my general conclusion.

I believe that the system of education pursued at Harrow is admirably adapted to train a boy to do his duty efficiently, and in a generous spirit, in any position of life to which he may be called. It does not profess to train him directly for any one particular profession or employment, nor is it pretended that when a boy leaves Harrow at the age of 18 or 19 he has reached more than the threshold of the education of his life. His actual acquirements are probably extremely scanty. With many of the most useful mental accomplishments he is very imperfectly equipped. To many of the highest branches of knowledge he is practically an entire stranger. He is still a boy and not a man. But it is confidently believed that if he has employed his time diligently at school, he will carry with him when he leaves it some capacity for thinking clearly, some sense of the value of accuracy and thoroughness in work, some respect for knowledge for its own sake, some appreciation of the most graceful and the most generous, if not yet of the most profound, thoughts enshrined in literature, a consciousness that he knows but little, and a desire to learn more; and, turning to the moral and social rather than the intellectual side of the education which he has received, a grateful conviction that he has throughout his school course been treated in a kindly and liberal spirit, always largely trusted and latterly invested with large responsibilities, as one equally interested with the masters in maintaining the moral welfare of the body to which they alike belong, and taught to believe that that welfare cannot be maintained unless its leaders are distinguished by vigilance, courage, love of justice, sympathy, and courtesy.

I am not entitled to offer an opinion based upon experience as to whether the results of this education as seen in after life can be regarded as satisfactory, but it seems to me that the qualities which I have enumerated, and which, as I believe, the system pursued at Harrow has a direct tendency to form and to foster, are the possessions most eagerly to be coveted for boys who are destined in their manhood to become "profitable members of the church and "commonwealth" of England.

Doubtless I can see some details in which our system is susceptible of improvement, but I may be permitted respectfully to remind the Commissioners in conclusion that the head master at Harrow is completely unshackled by any superior administrative authority, and that consequently it is open to him, and must therefore be his duty, to make such changes from time to time as may appear to him at once desirable in themselves, and opportune in respect of circumstances.

(Signed) H. MONTAGU BUTLER,
Head Master of Harrow School.

Harrow, Jan. 27, 1862.

LIST OF UNIVERSITY DISTINCTIONS, furnished in answer to Question 20, Part III.

IN reply to Question 20, Part III., I would now (May 30, 1862) submit to the Commissioners the following statement of Honours gained at the Universities by Harrow men between the years 1840 and 1862. (In 1840 Harrow gained the Ireland University Scholarship at Oxford, and the ninth place in the First Class of Classical Tripos at Cambridge.)

OXFORD.	CAMBRIDGE.
1841.	
First Class in Classics. Hertford Scholarship.	—
1842.	
—	Fellowship at Caius College.
1843.	
First Class in Classics. Eldon Law Scholarship.	—
1844.	
Open Scholarship at Balliol College.	—
1845.	
First Class in Classics. First Class in Mathematics.	Sixth in First Class of Classical Tripos. Scholarship at Trinity College.
1846.	
Open Scholarship at Balliol College. Senior Mathematical Scholarship.	Seventh Wrangler.
1847.	
Johnson's Mathematical Scholarship. Open Scholarship at Oriel College.	Chancellor's Medal for English Poem.
1848.	
—	Fellowship at Trinity College.
1849.	
Open Scholarship at Balliol College. Fellowship at Oriel College.	Chancellor's Medal for English Poem.
1850.	
First Class in Classics. Open Scholarship at Balliol College.	Chancellor's Medal for English Poem.
1851.	
English Essay Prize. Latin Verse Prize. Open Scholarship at Balliol College. Open Fellowship at Merton College.	Browne Medal for Greek Ode. Browne Medal for Latin Ode. Camden Medal for Latin Hexameters. Twentieth Wrangler. Fellowship at Sidney Sussex College.
1852.	
Open Scholarship at Balliol College.	Pitt University Scholarship. Camden Medal. Browne Medal for Greek Ode. Bell University Scholarship. Scholarship at Trinity College.
1853.	
First Class in Classical Moderations. First Class in Classical Moderations. Open Scholarship at Trinity College.	Battie University Scholarship. Camden Medal. Browne Medal for Greek Ode. Two Scholarships at Trinity College.
1854.	
First Class in Classics. First Class in Classical Moderations. Latin Verse Prize.	Senior Classic. First Chancellor's Medal. Craven University Scholarship. Eighth Wrangler. Forty-first Wrangler. Camden Medal. Browne Medal for Greek Ode. Porson Prize. First Members' Prize for Latin Essay. Fellowship at Trinity College. Fellowship at Clare College.
1855.	
First Class in Classics. First Class in Mathematical Moderations. First Class in Law and History. Two Fellowships at All Souls' College. Open Scholarship at Wadham College.	Senior Classic. Eighth in First Class of Classical Tripos. Chancellor's Medal for English Poem. Camden Medal. Browne Medal for Greek Ode. Thirty-eighth Wrangler. Fellowship at Trinity College. Scholarship at Trinity College.

1856.

Oxford.	Cambridge.
First Class in Classics.	Second in First Class of Classical Tripos.
First Class in Classical Moderations.	First Class in Theological Examination.
Open Scholarship at Balliol College.	Twenty-third Wrangler.
	Fellowship at Trinity College.
	Scholarship at Trinity College.

1857.

First Class in Mathematics.	Fifth in First Class of Classical Tripos.
First Class in Classical Moderations.	Ninth in First Class of Classical Tripos.
English Essay Prize.	Ninth in First Class of Classical Tripos.
Gaisford Prize for Greek Prose.	Thirtieth Wrangler.
Fellowship at Exeter College.	Fellowship at Caius College.
	Fellowship at Christ's College.

1858.

First Class in Classics.	Camden Medal.
First Class in Classics.	Browne Medal for Latin Epigram.
First Class in Natural Science.	Bell University Scholarship.
First Class in Classical Moderations.	Fellowship at Trinity College.
	Three Scholarships at Trinity College.

1859.

First Class in Classics.	Eighth Wrangler.
First Class in Classical Moderations.	Thirtieth Wrangler.
	Thirty-sixth Wrangler.
First Class in Classical Moderations.	Sixth in First Class of Classical Tripos.
First Class in Law and History.	Browne Medal for Latin Epigram.
Ellerton Prize for Theological Essay.	Chancellor's Medal for Legal Studies.
	Fellowship at Trinity College.
	Fellowship at Caius College.
	Two Scholarships at Trinity College.

1860.

First Class in Classics.	Second Wrangler.
First Class in Law and History.	Second Smith's Prize.
First Class in Natural Science.	Porson Prize.
First Class in Classical Moderations.	Browne Medal for Greek Epigram.
Newdigate Prize for English Poem.	Scholarship at Trinity College.
Open Scholarship at Balliol College.	
Open Scholarship at University College.	
Open Scholarship at Exeter College.	

1861.

First Class in Classical Moderations.	Twenty-sixth Wrangler.
	Second in First Class of Classical Tripos.
First Class in Mathematics.	
Open Scholarship at Balliol College.	Sixth in First Class of Classical Tripos.
Open Scholarship at Oriel College.	First Class in Theological Examination.
	Browne Medals for Greek and Latin Epigrams.
	First Members' Prize for Latin Essay.
	Scholefield Prize for Biblical Greek.
	Carus Greek Testament Prize.
	Fellowship at Trinity College.
	Fellowship at St. John's College.
	Four Scholarships at Trinity College.
	Open Minor Scholarship at Trinity Hall.

1862.

Open Scholarship at New College.	Sixteenth in First Class of Classical Tripos.
Open Scholarship at Corpus Christi College.	Sixteenth in First Class of Classical Tripos.
	Scholarship at Trinity College.

(Signed) H. Montagu Butler.

Appendix.—(*See Reply to Question* 22.)

A.—Copy of Statement made by Mr. Wood, the Drawing Master.

"In answer to the question numbered 22, I answer that the time allotted to drawing studies is 2 hours weekly, though in many, indeed most, cases the boys occupy much more of their time in that pursuit. This is, as you know, optional with them.

"The number of boys during the last six months of 1860 availing themselves of my instruction was between 60 and 70. Some of these had been my pupils for two or three years, and some were beginners.

"I think as a rule that the study of drawing is prosecuted with great success. Of course there are exceptions, but they are few; probably not one in twelve or more. Some are eminently successful.

"My course of instruction is based on a knowledge of first principles, such as perspective, on which subject I give periodical lectures, and proceeds by regular course to the use of colour, up to the most finished specimens of landscape painting.

"Sketching from nature during the summer term is made an essential portion of our studies, but as attendance on me takes place during the boys' play hours, I cannot always insist on the latter, though the number availing themselves of the opportunity of going out for that purpose is considerable."

Answers. Harrow. *Rev. H. M. Butler.*

B.—Copy of Statement furnished by Mr. Tillyard, the Master in Music.

"Time allotted for musical tuition, two lessons per week, of 50 minutes each lesson.

"Instruction, both elementary and advanced.

"The number of boys taking lessons in music the last term in 1860, 18.

"The average time they had been cultivating it at school, about two years, some more, some less."

Answers of the Rev. W. Oxenham, M.A., Lower Master.

Rev. W. Oxenham.

II.

10. The office of "second," or "lower master," (appointed by the governors, and usually, as in my case, the *senior* assistant master at the time of a vacancy,) is paid by the governors in two annual sums, amounting to 49*l.* 8*s.* 4*d.*, viz., 24*l.* 8*s.* 4*d.* as "salary," and 25*l.* "in lieu of a house." The chief source of his receipts is a proportion of the annual charge of the head master to all boys not on the foundation. This proportion was, till and after the time of my appointment, March 1841, a quarter of the 10*l.* (reduced from 10*l.* 10*s.* about ten years previously) received by the head master. When the charge was raised by Dr. Vaughan to 15*l.*, it appeared equitable from the grounds of that change, to make the lower master's portion one-fifth of the new charge. I have, therefore, ever since received a capitation sum of 3*l.* per annum, the amount, of course, depending wholly upon the numbers. It was *my* proposition, assented to by Dr. Vaughan, that the second master's share should no longer be *one-quarter* but *one-fifth*. No other payment is received by me in that capacity.

For assistance in the instruction of the lower school I pay 300*l. per annum*.

As private and domestic tutor I am in the same position as the other tutors with large houses, containing about 30 pupils, my ordinary number, and upwards. The regular charge to the parent of each inmate is annually 99*l.*, of which 15*l.* is supposed to be for private *tuition*, because that sum is received by us for *out-pupils*, with of course somewhat less of responsibility, and 10*l.* is held to include, and to supersede, *all* charges for furniture, book-cases, carpets, &c., &c.

I consider *the whole* to be the annual charge for *tuition and board and every domestic expense*.

An entrance of 6*l.* and 4*l.* for outfit, including sheets, is charged. To this add, as in all cases, "head master's charge," 26*l.* 5*s.*

But as there must be many other *personal* expenses incurred by each boy, regulated and limited by authority, it is important to state the annual sum likely to be charged to each parent, inclusive of all usual costs for books, clothes, three journeys, cash advanced, &c.

This may be stated at an average of 55*l.* per term, or 165*l.* per annum. All the supplies become somewhat larger to an older boy.*

December 31, 1861. W. Oxenham.

* The following Statements are added with a view to comparison.

(1.) Mr. A.B., Assistant Master.

The ordinary charges of a boy in my house are:—	£	s.	d.
1. Board, private tuition, &c.	99	0	0
2. Public tuition, school charges, &c.	26	5	0
3. Tradesmen's bills, extra master's allowance, 2*s.* per week, medical attendance, journey money, money advanced, &c. about	41	0	0
The average during the last year has been (including entrance fees, &c.) about	167	0	0

The limits between which they range are from about 150*l.* to 190*l.*; but the last would arise from large sums advanced for journey money, public or private entrance fees, or other exceptional expense.

Answers.

Harrow.

Rev. E. H. Bradby.

Answers of the Rev. E. H. Bradby, M.A., Assistant Master.

II.

The sources of my emoluments as a classical assistant master are:—

1. A yearly salary of 150*l.* from the head master.
2. A payment of 15*l.* per annum per head from not more than 40 private pupils = 600*l.*
3. The profits from the payments of boarders. I have 16 boarders who pay for board and washing 90*l.* per annum each. — 90*l.* × 16 = 1,440*l.* I reckon the profit on this item to be about 29*l.* per annum per boarder, when the number is full.

The number of my house is limited by the head master, so that the payments may, and sometimes do, fall below this amount but cannot rise above it.

Rev. R. Middlemist.

18. As the best answer to this question, as regards my own boarding house, I send* in with this a copy (without the names) of the highest and the lowest bill for a school-term sent in by me to boys' parents during the year ending Midsummer 1861. I have, however, taken bills of boys not in their first term of residence, as the entrance fees swell the amount exceptionally.

All charges under tradesmen's bills and extra masters are for optional, the rest for practically necessary expenses, which fluctuate very little in amount.

The average of the *total* yearly bills (entrance fees and all included) sent in by me for the year ending Midsummer 1861, for boys boarding in my house is 166*l.* 2*s.*

27. In my house there is a charge of 4*l.* for outfit for every new boy. For this, bedstead and bedding (except sheets), chair, table, bookcase, washstand, drawers, fender and fire-irons, gas fittings, and all other necessary furniture is provided, except carpets, for which there is a separate charge of 7*s.* per term = 21*s.* per annum.

32. Sec. 4. There are 16 boys now in my boarding house.

All articles are furnished by tradesmen on the receipt of a written order signed by the master, and in many cases signed also by the parent.

No charge is made for furniture in the boys' room in my house.

The number on the list of my house during the last quarter has been 39, but they are seldom all present at the same time.

(2.) Mr. C.D., Assistant Master.

Ordinary charges and expenses in my house are:—

	£ s. d.	£ s. d.
1. *Uniform*:—		
Board	75 0 0	
Private tuition	15 0 0	
Extra charges, *i.e.*, extra washing, grocery, repairs, lending library, glazier, carpenter, smith, and carpet	10 0 0	
Entrance to the house is not included, 6*l.*		
	100 0 0	
Head master's account, public tuition, school charges, &c.	26 5 0	
		126 5 0
2. *Variable*:—		
Tradesmen's bills, extra masters, medical attendance, weekly allowance, &c.		39 5 0
		£165 10 0

This is the average of 50 boys in my house for the year ending Midsummer, 1861, during which the *highest* account was 197*l.* 6*s.* 2*d.*, and the *lowest* 138*l.* 1*s.* 6*d.*

The charges for extra masters, and the tradesmen's accounts, are incurred only under my direct supervision, and with parents' sanction. For every article supplied by a tradesman, an order is obtained from the boy's parents, and countersigned by me. These orders are sent home with the tradesman's bill included in my quarterly account.

The statement of charges and expenses applies to all boys equally.

In lieu of the former arrangement, by which each boy bought the furniture of his own room, I have now for many years made to each boy a charge of 4*l.* on entering the house, for *outfit*. This is intended to cover the cost of chair, table, book case, chest of drawers, carpet (for the first term), breakfast service, when the boy takes breakfast and tea in his own room.

The number of boys now in my house is 50.

[Statements have been furnished by the other masters having boarding-houses, but the charges and general average appear to be fairly represented by those printed in the text and in this note. The charges at a "*Small House*" are shown by the "Joint Statement" of the masters of small houses. (*See* also Mr. Bradby's Answers.)]

* Account with Rev. E. H. Bradby, for Term ending

Harrow School.	Christmas, 1860. (Highest during Year.)	Easter, 1861. (Lowest during Year.)
	£ s. d.	£ s. d.
School charges	8 17 6	9 0 0
Board, washing, and private tuition	35 0 0	35 9 0
Allowance	1 4 0	0 16 0

Tailor	4 19 0	0 1 3
Total	69 16 6	49 6 7

III.

15. It is not required in any form that boys should construe their lessons to their tutors before they construe them in school, but it is the custom of some tutors to hear their particular pupils in any of the lower forms construe the lessons which are done in "preparation pupil room," (*see* Report of work done in pupil room). I do not myself do this, except in case of a particularly difficult lesson, as my experience is that it occupies the time during which a boy ought to be *learning* his lesson, and impairs, instead of improving, the style in which the lesson is done in school. I confine myself to giving help, when needed, in the parsing or meaning of difficult words, the occasional explanation of allusions,† and the construing of hard passages.

E. H. Bradby.

Harrow, November 28, 1861.

Answers of the Rev. R. Middlemist, M.A., Mathematical Master.

II.

10. No stipends are paid out of the foundation to the mathematical masters. Each boy in the school *not on the foundation*, pays 4*l.* a year, and 1*l.* on entering the school for the mathematics taught in school; and a few others of the boys, as voluntary private pupils, pay an additional sum of 9*l.* a year each to a mathematical master for extra instruction. These with the profits from boarders in some cases are the sources of income of the mathematical masters.

III.

9. In determining a boy's place in the examinations, at the end of each of the three school quarters of a year, the average of marks of the first 4 or 5 boys of each form in classics is taken as the standard. Of this average one fourth is taken for the average of the marks of the same number of the highest boys in mathematics, and one ninth for the average in modern languages. The sum of these marks determines each boy's place.

The mathematical divisions of the school are as follows:—

(1.) The monitors and two sixth forms of 60 boys are divided into six divisions of about 10 boys each, and each division is with a master for an hour three times a week.

(2.) Four fifth forms of about 144 boys are divided into eight divisions in like manner.

(3.) The remove and 1st shell of 72 boys into four divisions.

(4.) Each of the forms below the 1st shell is divided into two divisions of about 18 boys each.

10. Instruction in mathematics for three hours a week to all the forms above the fourth, and for two hours to the fourth is given; and the preparation for this instruction usually occupies the boys for two or three hours a week besides.

In addition to this compulsory work in mathematics, any boy may have extra instruction as a private pupil.

11. A fee of 4*l.* a year with 1*l.* at entrance is paid by each boy not on the foundation for mathematics taught in school, and 9*l.* a year when a boy has private lessons besides.

16. See answer to question 9.

19. The instruction in mathematics given in school and in private tuition will, in many cases, if continued a reasonable time, fit a boy for the University and the competitive examinations.

Suggestion.—It would be desirable to limit the number of boys on the foundation, so as to make the number bear some reasonable proportion to the sums paid by the foundation to the masters; otherwise, as at present, some of the home boarders who claim the benefits of the foundation will continue to be educated in the school, at the expense of the rest of the boys who pay the masters for their board and education.

R. Middlemist, M.A.,
Harrow, November 21, 1861. Mathematical Master.

† [The subjoined statements are made on this head by other Assistant Masters:—

"As a general rule I do not construe to my pupils the lessons they prepare in pupil room. They frequently apply to me for help in difficult passages, which I give to the extent of construing a single line or a few lines if I think it necessary; as often as not it is merely some unusual construction which they ask to have explained. In the case, however, of pupils who are barely equal to the work of their form, or who have been recently introduced to a new style of writing, as for instance, when a boy reads Homer for the first time, I do not hesitate at times to construe through the whole of the lesson, when the time of preparation is nearly over, and when I see that the boys in question have been diligently exerting themselves, and are not relying merely on their tutor's construe to tide over the difficulties of the lesson.

"These remarks apply only to the Remove, Shells, and 4th Forms; the 6th and 5th Forms not preparing their lessons in pupil-room."

A. G. Watson, Assistant Master.

"Such is quite my practice."

Wm. Oxenham, Lower Master.

"I seldom spend more than ten minutes in hearing any lesson which is to be heard again in school."

F. Rendall, Assistant Master.]

JOINT ANSWER of the ASSISTANT MASTERS having Small Houses to Question 18, Part II.

The ordinary charges and expenses of a boy in a *small house* at Harrow school, that is to say, all such charges and expenses as are usually included in the bills sent to parents, are *per annum* as follows:—

	£	s.
(1.) Necessary and uniform expenses—		
Board and tuition - -	135	0
Private tuition - -	15	0
Head Master's charge -	26	5
Allowance - - -	3	18
	180	3

(2.) The average amount of variable expenses, (*e. g.*, extra masters, medical attendance, books, stationery, clothes, &c., exclusive of journey money), are from 20*l.* to 30*l.*

Thus the total average amount of a boy's expenses is from 200*l.* to 210*l. per annum.*

An express order from home is required for the engagement of extra masters, and for the purchase of clothes.

BROOKE F. WESTCOTT. | CECIL F. HOLMES.
WILLIAM J. BULL. | ARTHUR G. WATSON.
FREDERIC W. FARRAR. | H. W. WATSON.
ROBERT B. HAYWARD.

Harrow, November 18, 1861.

ANSWER of MONS. G. RUAULT, Master in Modern Languages.

MONS. G. RUAULT.

III.

Modern Languages.—The Upper and Under 6th Form and Monitors are divided into 4 divisions, 2 German and 2 French.

The 5th Form, 1st and 2nd remove, into 4 divisions, 2 German and 2 French.

The 5th Form, 3rd and 4th remove, into 4 divisions, 1 German and 3 French.

The Remove and Shells, 1, 2, 3, into 6 divisions, all French.

The Shell, 4th remove, into 2 divisions, French.

The 4th, 1st remove, into 2 divisions, French.

The 4th, 2nd remove, into 2 divisions, French.

The 4th, 3rd, and 3rd Form, into 2 divisions, French.

Work in the German Divisions.—In the 6th Form, Götz von Berlichingen; Heimann's materials for translation into German; the Repetition taken from the poetry of Ermeler's Lesebuch.

In the 5th Forms, Ermeler's Lesebuch; Tiarks' Grammar.

The subjoined STATEMENT shows the payments made by way of Salary, by the Head Master, the Governors or otherwise, to the several Assistant Masters; the Number of each Master's Pupils; and the Number of Boys in his boarding house in the year ending at Midsummer 1861.

—	Salary paid by Head Master.	Share of Payments for Mathematics.	Other Emoluments, if any, not being Tuition Fees or Profits of Boarding Houses.	No. of Pupils, average during Year.[a]	No. of Boarders, average during Year.
	£	£	£ s. d.		
Mr. Bowen, Classical assistant master.	300				
Mr. Bradby, Do.	150			40	16
Mr. Bull, Do.	210			7	7
Mr. Drury, Do.	150			32	28
Mr. Farrar, Do.	150			37	7
Mr. Harris, Do.	150			66[b]	50
Mr. Holmes, Do.	150			35	7
Mr. Hutton, Do.	150			16	11[c]
Mr. Rendall, Do.	150			42	36
Mr. Smith, Do.			300 0 0[d]		
Mr. Steel, Do.	150			31	41
Mr. Vaughan, Do.	150			43	38
Mr. A. Watson, Do.	150			40	6
Mr. Westcott, Do.	150			40	7
Mr. Hayward, Mathematical assistant master.	150	130		21	4
Mr. Marillier, Do.		582	16 13 4[e]		
Mr. H. Watson, Do.		460		22	8

Mr. Ruault, Master in Modern Languages.	200		490 0 0	17	10
Mr. Masson, Do.	100		490 0 0		3

[a] The classical tuition fee is 15*l.* a year for each pupil; the mathematical 3*l.* a term, or 9*l.* a year; for modern languages the same.

[b] Mr. Harris states that this number was exceptional, his ordinary number being about 60.

[c] Seven at 13*5l.* per annum; four at 10*5l.*

[d] From lower master.

[e] 6*l.* 13*s.* 4*d.* as writing master to the free boys; 10*l.* as librarian.

CORRESPONDENCE and ADDITIONAL ANSWERS respecting PROFITS of BOARDING HOUSES.

LETTER from the SECRETARY to the HEAD MASTER. (Extract.)

March 27, 1862.

The Commissioners think it desirable that the profits made by masters keeping boarding houses, being a recognized and substantial part of the masters' remuneration (although there are many who have not houses), should be rather more definitely stated. This might be done by stating the number in each house and the profits on each boy, or the number in each house and the whole net profit of the master derived from the house; the latter seems to me to be the most advisable. A brief statement of the basis of the calculation might be added if the masters making the return thought it well to do so, and such a statement would certainly make the return more satisfactory.

The statement might be made either on the year 1860, or on an average of three years.

Whatever course is adopted should be followed uniformly, if possible, by all the masters having houses.

If there are any details which cannot be conveniently entered into on paper, the Commissioners will willingly afford the opportunity of further explanation *vivâ voce.*

MONS. G. RUAULT.

The HEAD MASTER to the SECRETARY. (Extract.)

April 9, 1862.

I enclose statements from the masters of the large houses estimating the profits derived from their boarders.

Mr. Bradby also adds a detailed statement, which the Commissioners will doubtless desire to append to that which he originally sent in.

(1.)—Rev. WM. OXENHAM, Second Master.

As the number of pupils boarded in the same house may fluctuate considerably, it would be very difficult to estimate the amount of profit on each boy at any one time, or by an average calculation. But after long experience of Harrow receipts and expenses, I believe the amount of benefit may be held to range between certain limits at an approximate amount, and this I attempt with some reference to former periods within my recollection, when higher charges were made, and the outlay was not materially greater.

At the present rate of charges it may be asserted that little if any clear gain could be extracted from the payments of 20 boarders, unless in a house barely capable of containing them; whereas it is indispensable that a house should be fully capable of handsomely receiving at least 12 or 15 more; and in this case the profit increases with the numbers in a rapidly advancing ratio.

Upon 30 boarders I calculate upon a profit of 18*l.* per annum each, and I have rarely exceeded this number by more than three, upon whom the additional outlay would be such that the 33rd might produce a clear profit of 30*l.*, and a 35th of 40*l.*, together with an increase, very difficult to estimate, of gain upon the entire complement. Absences and sudden changes constantly interfere with all calculations; and it must be added in simple fairness, though with regret, so do great delays, or entire negations of payment, which, however, I have never treated as affecting the result. The clear benefit of *tuition money* received for the outlay of time, and toil, and thought is what alone reconciles the unevenness and disparity of benefit accruing from the department of board. I may without hesitation affirm that in the first 20 years of my mastership at Harrow, during a very small portion indeed of which the school was flourishing, my *whole* profits, by which, i.e., I could lay by in store, were absolutely *nil.*

W. OXENHAM.

Harrow, April 9, 1862.

(2.)—G. F. HARRIS, Esq.

In reply to the question of the Commissioners on this head, I can only give such information as the best means in my power will supply. I cannot profess to estimate from a yearly statement of actual housekeeping expenses the average cost of each boy boarding in my house. I do not keep such accounts as would enable me to do this; and there would be great risk of error in such approximate calculations, as many items of expense cannot be distinguished.

I know for a certain fact, that the sum which I am able to realize, *from this source* annually, after deducting on the one hand all other sources of income, and on the other, the whole expenses of myself and the establishment, amounts to 300*l.* If to this sum be added a liberal estimate of the

ANSWERS.
HARROW.

expenses incurred in the maintenance of myself and family, and of my own personal expenditure, and this I would put at 1,200*l.* a year (including in this sum various official hospitalities, &c.,) I should state the profits derived from *board and tuition* of 50 boys, (at 100*l.* each, including the extra charges,) at 1,500*l.*, or an average profit will result of 30*l.* on board and tuition, or 15*l.* on board alone.

It must be borne in mind that up to a certain number of boys, there is no profit whatever derived from a boarding house; and that when that number is attained, the profit upon each boy increases up to a certain point again, the difference of cost being only the amount of actual maintenance, until some fresh additional expenditure is incurred to accommodate the increased number of boys. That certain number will vary according to the circumstances of the house, and will of course be higher when, as in my own case, the rent and necessary staff of servants, with the consequent expenses, are very large.

G. F. HARRIS.

(3.)—Rev. B. H. DRURY, Rev. R. MIDDLEMIST, and E. H. VAUGHAN, Esq.

I have felt great difficulty in trying to estimate the profit on boys boarding in my house; and I am not satisfied, after all, that the conclusion I have come to is more than approximately accurate. The difficulty arises (1) from the want of means of judging what share of the expenses of my household is incurred purely on the part of my boys, and (2) by the varying number of boarders in successive quarters; for it is evident that as below a certain number of boys, there is no profit at all, so above that number the rate of profit increases with every additional boy.

According to the best calculation I can make, I have estimated the profit on each boy for the year 1861, on an average of 28 boys, at 30*l.*, that is, 15*l.* on the sum charged for board, and the whole of the charge of 15*l.* for tuition.

B. H. DRURY.

Harrow, April 22, 1862.

I agree in the above introductory remarks, and I would place the approximate profit of each boy of 35 at about 18*l.* a year for board.

R. MIDDLEMIST.

I am disposed to estimate my profits on each boy at a higher amount, but I have not kept sufficiently accurate estimates to enable me to speak with certainty; my number has been on an average 38.

E. H. VAUGHAN.

(4.)—Rev. F. RENDALL.

The gross profits of my boarding house consists of 98*l.* annual payment for *board and tuition*, and 6*l.* entrance fee from 36 pupils. But from this I have to deduct, 1st, a fixed payment made by me, privately, to one of my junior colleagues for assistance in their tuition; and, 2ndly, that portion of the current expenses of my establishment which belongs to my pupils. Now, though I have for many years kept separate accounts of all personal and family expenses which are unconnected with my pupils, there remains a large amount of establishment expenses which I cannot apportion under these two heads. I have, however, done my best to give at least an approximation to the truth; and I estimate my net profit as 29*l.* for each of my 36 pupils, making 1,044*l.* Perhaps I ought to notice, by way of accounting for the large expenditure here implied, that not only are the habits of public school boys generally, and the style of accommodation provided for them, expensive, but Harrow itself is, from exceptional circumstances, a dearer place to live in than most parts of London. In estimating these profits pecuniarily, it should be borne in mind that they are the *maximum* result of a successful speculation. My house has been for some years full, but a diminution in its numbers would diminish my profits in a much more rapid ratio, and the failure of my own health would compel me to resign my mastership at once.

FREDERICK RENDALL.

(5.)—Rev. T. H. STEEL.

The undersigned, in reply to the inquiry of the Commissioners as to the amount of profit made by him on each boy boarding in his house, begs to inform them that having made as careful an inquiry as was in his power into the ordinary annual expenditure, &c. of his house, he has come to the conclusion that this profit may be fairly estimated as amounting on the average to about 15*l.* a year for each boy in a house whose usual number has been about 41 boys.

THOS. HENRY STEEL.

April 9, 1862.

(6.)—Rev. E. H. BRADBY.

In correcting the proof of my answer to this question I inserted a statement that I reckoned the profit on the sum paid for board, &c., by each boy in my house, when it was full, at about 30*l.* per annum. This statement was based on the return made by me for the assessment of the income tax. I have since this taken occasion to verify my statement by going very carefully over the expenses of a single year. The plan pursued was as follows: First, I set aside all strictly personal expenses, such as wine, my own house, furniture, &c., and the charge for income tax. I then reckoned the cost of my establishment as subjoined to this answer. The total thus obtained I divided by 25, the average number of inmates in my house, and, taking 5½ parts as my own share, set down the remaining 19½ parts to my 16 boarders. On deducting the sum thus obtained from the sum paid by 16 boys for board, washing, grocery, and repairs, a profit of 464*l.* is shown, which is at the rate of 29*l.* per boy.

It is to be noticed that in this calculation I have only reckoned the *necessary* expenses of my house, and made no allowance for the *incidental*. The apparent profit is much larger than the real. By incidental expenses I mean such as arise from local subscriptions, the claims of hospitality, &c. These expenses always increase with the scale of a household, and are particularly inseparable from the position which I hold.

I may add that in the course of nine years I have spent upwards of 300*l.* on various improvements, such as laying on gas, adding and altering rooms, and so on, for which I receive no direct return, the number of my house not being enlarged in consequence.

STATEMENT.

Household Expenses for one Year, 1861.

Receipts.	£	s.	d.	Payments.	£	s.	d.
16 boys at 90*l.*	1,440	0	0	Total for board and washing.	767	17	4
2*s.* per week per head for grocery, 37 weeks.	60	14	0	Fires and lights	73	13	0
Repairs	16	16	0	Rent, taxes, rates, and wages.	423	0	0
Three entrance fees	18	0	0	Tradesmen's bills for repairs, supply, and renewal of necessary furniture.*	109	14	0
	£1,535	10	0		£1,374	4	4

(Average number of household 25, £1,375 ÷ 25 = £55 per head.)

Deduct for self, wife, 2½ servants, and (generally) 1 guest = 5½ parts = £302 10*s.* — 302 10 0

£1,071 10 1

	£	s.	d.
Receipts	1,535	10	0
Cost of 16 boys	1,071	10	0
Profit	£464	0	0 = £29 per head.

E. H. BRADBY.

Harrow, April 5, 1862.

JOINT STATEMENT of MASTERS having small Houses.

The average profits on the sum of 135*l.* paid for board and tuition in a "small house" may be estimated at 50*l.*; but this estimate is based on the supposition that the number of boarders in the house is always complete. According to the present rate of fixed and necessary expenses (rent, taxes, wages, &c.), in most of the small houses, which are calculated to receive seven boys, four boarders would not repay the outlay incurred for their reception. As the number varies from five to seven, the profit on each boarder varies (about) from 10*l.* to 50*l.* per annum.

It may be added that in the small houses no charge is made for "entrance."

BROOKE F. WESTCOTT.
CECIL F. HOLMES.
WILLIAM J. BULL.
ARTHUR G. WATSON.
FREDERIC W. FARRAR.
H. W. WATSON.
ROBERT B. HAYWARD.

---

* One or two of these bills are reckoned on an average.

QUESTIONS, &c.

I.

1. State generally the various kinds of property held by or in trust for the School, and the various kinds of revenue which it possesses, mentioning any special trusts to which such property and revenues or either of them are subject.

2. Be so good as to specify in detail the several properties and sources of revenue possessed by or held in trust for the School. For the sake of clearness it is recommended that the statement should be in a form corresponding as nearly as may be with the accompanying specimen (A).

3. State the system adopted for the management and receipt of the rents or other produce of the property and endowments of the School, and for the audit or examination of the accounts.

4. Have any material changes been made in the system of letting and management since the foundation of the School, and, in particular, within the last 50 years? Are any portions of the property now let at rackrent upon which fines or any payments of that nature were formerly taken, or *vice versâ?*

5. If it is or has been the practice to take fines, or any payment of that nature, on renewal of leases of property belonging to the School, can you state when this practice was introduced, and on what principle fines are set?

6. Can you furnish any information showing the alterations in value of the property or any part of the property of the School since its foundation, and particularly within the last 50 years, and the rates of any increase or decrease that may have taken place?

7. Be so good as to furnish the following statements:—

(1.) A statement showing the total amount received by or on account of the School for the year 1860, including rents, fines, heriots, the produce of timber, and all other receipts of every kind, and also a detailed statement or account of the application of the money so received, pointing out any particulars in which such latter statement would not fairly represent your ordinary practice, and likewise pointing out how far and in what respects you consider such application to be directed or authorized by your statutes or regulations, by usage, or on other grounds.

(2.) A statement showing the average receipts under different heads during the last seven years.

8. Do the statutes or regulations contain any directions respecting the application of surplus revenue? Have those directions always been followed, and are they considered to be now in force? If not, will you state the grounds upon which they are or have at any time been departed from?

9. Please to furnish a statement of the ecclesiastical benefices in the gift of or otherwise attached to the foundation, with the actual value of each, specifying which of them are now held by persons who are or have been Fellows of the foundation, or connected with the School as masters or assistant masters or otherwise. Is there any rule, usage, or practice regulating the exercise of the ecclesiastical patronage belonging or attached to the foundation?

II.

1. When and by whom was the School founded? What is the nature of the foundation, and how is it constituted? and in what relation does it stand to any corporate body, ecclesiastical or civil, with which it is connected?

2. Be so good as to state the original and the present constitution of the foundation; the powers, duties, privileges, and emoluments (by statute or usage) of its head; the number, privileges, emoluments, and duties of the Fellows, or other members of it (not being scholars); the statutory qualifications for and the mode of election or appointment to the headship or to a fellowship or other place on the foundation (not being a scholar's place), and any statutory restrictions to which the head or any of the other members are subject. Has the original number of members been increased or diminished; and if so, by what authority? and does any power now exist of increasing or diminishing the number? Do you conceive that any such increase or diminution would now be beneficial to the foundation?

3. In what person or body of persons is the government of the School vested, and what are the powers considered to belong to such person or persons?

4. Is the School governed by statutes? If not, are there any rules or regulations by which it is governed?

5. Have the original statutes or regulations made for the government of the School been altered; and if so, when and by what authority? Have they in any, and what respects ceased to be observed? If so, will you state any reasons by which you consider the non-observance of them to be justified?

6. Will you furnish the Commissioners with a copy of the original statutes or regulations, of any others which may have been subsequently made, and of any ordinances and dispensations which may have been made or granted by authority in relation to the School? And can you state where the originals now are, or give the Commissioners any information on the subject?

7. Is there any power of altering or amending the statutes or regulations, or of granting dispensations from the observance of them, and if so, in whom does it reside?

8. Has the School any visitor or visitors? If so, is the visitor's authority defined by the statutes, or does it depend solely on the general law affecting visitors and visitorial powers? Is it subject to any special limitations? Are there periodical visitations? If not, will you mention any cases in which the visitor's authority has been exercised during the last 50 years? Has it ever been exercised to relieve from the observance of statutes, or to make new statutes?

9. Are there any charters or instruments of foundation or endowment relating to the School? If so, can you furnish the Commissioners with copies of them, or of any of them, and can you state where the originals now are, or can you give the Commissioners any information on this subject?

10. What were originally, and what are now, the nature and amount of the emoluments of the head master, and other masters and assistant masters? State particularly the sources of these emoluments, and the average amount derived from each source. If stipends are paid to them, or any of them, out of the revenues of the foundation, what proportion did those stipends originally bear, and what proportion do they now bear, to the emoluments of the Fellows or other members of the foundation? Is the income of the head master chargeable with any outgoings not bringing back any direct personal emolument to him, such as partial or entire payments of the salaries of assistant masters or other persons on the School establishment, or any similar expenses? If so, state the amount of such outgoings.

11. What was the original number of masters, and what is now the number of masters, and assistant masters? Can you state at what times the increase has taken place, and what additions, if any, have been made to the number, and when, during the last 50 years? Is there any authoritative rule or any custom regularly observed as to any proportion between the number of masters and the number of boys? If so, when was the rule introduced, and with whom does it rest to see that it is adhered to?

12. What are the specific duties and powers, and what is the authority in the School, of the head master and of each of the masters and assistant masters (including all persons engaged in any way in the work of teaching)? How and by whom are they appointed? Are they, or any of them, customarily, or by rule, taken from any particular profession, place of education, class, or body of persons, and are there any conditions of eligibility established by rule or custom? Is there any power of removing them, and, if so, how and by whom is it exercised? Is there any rule or usage respecting superannuation, or any provision for it?

13. What are the privileges or advantages given by the original statutes or regulations to scholars on the foundation? and what, according to the statutes or usage of the School, constitutes a foundation scholar? What privileges or advantages do such scholars now actually enjoy? If there is any difference between their original and their actual condition as to such privileges or advantages, can you explain how and when it arose? Are there any advantages common to the other boys from which they are excluded? Do you consider the position of a foundation scholar to be as advantageous (either positively or relatively to that of a Fellow, or to that of boys not on the foundation) as it was originally, or to be more or less so, and to what causes do you attribute the change? Can you represent the amount of it in money? Is any money paid by a foundation scholar on account of board, lodging, instruction, or general school charges, over and above what is provided for him out of the foundation? If so, state the average amount and the nature of the charges.

14. Is the number of foundation scholars fixed by the statutes or regulations? Do they provide for or authorize, or do they expressly or implicity prohibit, an increase or diminution of the number? Mention any portions of them which in your opinion bear upon this subject. Can you state whether the actual has ever fallen below the statutory number, and when, to what extent, from what length of time, and from what causes?

15. What are the qualifications for election or admission as a foundation scholar, and how and by whom are such scholars elected or admitted? Have there been any and what changes in these respects within the last 50 years?

16. Besides foundation scholars (or if Rugby has no such scholars), do the statutes or regulations give special advantages to any particular class of boys having a local or other qualification? If so, are the statutes or regulations observed in this respect, or when and how did they cease to be so?

17. Is the admission of boys, not being foundation scholars, and having no local or other special qualifications, provided for or contemplated in the statutes or regulations? Is there any limit to the number of boys who may be so admitted, and to what extent are they entitled to share in the advantages of the School? Are they entitled to be taught gratuitously or at fixed charges? Are the statutes or regulations observed in this respect, or when and how did they cease to be so observed?

18. Be so good as to state particularly the ordinary charges and expenses of a boy at Rugby (that is to say, all such charges and expenses as are usually included in the bills sent to parents), their average amount, and the limits within which they usually range, distinguishing those which are variable from those which are uniform, and such as are only usual from such as are obligatory. Are these charges and expenses bounded by any definite limit or subject to any supervision or control? What charges are made, under what heads, and in what manner, for instruction or tuition in or out of School, to whom are such charges respectively paid, and are any, and which of them, considered as "extras"? Does your statement of charges and expenses apply equally to all the boys, and, if not, what are the differences or exemptions, nominal or real?

19. Please to state the total amount of the sums received from boys or their parents or guardians during the year 1860, for instruction or tuition.

20. Are there any boys participating in the general instruction of the School who lodge and board either with their parents or in other houses not recognized as boarding houses by the authorities of the School? If so, what are the payments obligatory in such cases for each boy, and are such boys, as regards instruction and the use of playgrounds, and in all other respects, on an equal footing with the other boys, or what differences are there?

21. What is the amount of accommodation afforded for boarders, whether in the School itself or in boarding houses? What rules or regulations (if any) are there, and how are they established and enforced, respecting the persons authorized to keep boarding houses, the *maximum* number in each house, and the general management of such houses as regards the health, comfort, and good order of the inmates?

22. Is there one uniform kind of domiciliary accommodation furnished to all the boys of the School? if so, what is its nature? if not, what are the varieties, and do these depend on the boarding house in which the boy boards or on the part of the School to which he belongs, or on the option of the parents and guardians of the boy, or on rank? Is there a varying rate of charge for lodging correspondent in each case with the varying nature of such domiciliary accommodation? To what extent, and subject to what distinctions, do the boys prepare their school work, and generally prosecute their studies in such domiciles, and to what extent elsewhere? if to any extent elsewhere, in what place, and under what conditions as to privacy or otherwise?

23. Is there one uniform scale of diet supplied to all the boys? If so, what is the number, what the hours, and generally what the description of such meals? If not, what are the varieties? and do they depend on age or position in the School, or on the varying practices of different boarding houses, or on the option of parents and guardians, or on the rank of the boys? and is there in all cases a varying rate of charge for board correspondent with the varying quality and number of such meals?

24. Does the rate of charge, for either board or lodging, depend at all upon the social or scholastic status of the person keeping the boarding house? Does it depend at all upon the rank or the scholastic status of the boys lodged and boarded?

25. Is any part of the profits derived from the charges for board and lodging regarded as an indirect payment (total or supplementary) for other services to the School, whether instructional or disciplinary; such as teaching, tuition, moral superintendence, preaching to the boys, or any similar service?

26. Is the resort by the boys to pastry-cooks' shops, inns, or other houses of entertainment a recognized or a customary method of obtaining either meals or any considerable portion of their food?

27. What is the system upon which furniture is provided for the boys' rooms, and what charges are made in respect of it?

28. With whom does the selection of the boarding house in which a boy lodges rest? Is a recommendation commonly given by any school authorities?

29. How many of the classical, mathematical, and other masters and assistant masters keep boarding houses? Is it a privilege which any of them are unable to obtain? How many boarding houses (if any) are kept by persons taking no part in the work of teaching?

30. Have the authorities of the School any, and what, power to limit the number of boarding houses within certain bounds? If so, can boarding houses be kept, and are any kept, without their permission, beyond those bounds?

31. What is the average period for which boys remain at the School? Is there any difference in this respect between boys on the foundation and boys not on the foundation?

32. Please to state,—

1. The total number of boys now at the School.
2. The greatest number in each year during the last 20 years.
3. The number of boys now in each form, class, or division.
4. The number of boys now in each boarding house.

III.

1. What is the earliest age, and what is the latest age, at which a boy may be admitted into the School?

2. Is any preliminary knowledge (proved by examination or otherwise) in spelling, writing, and arithmetic, or in any other subject, required of a boy on admission into the School?

3. Is there any limit to the age at which a boy may be originally placed in any of the lower forms, or beyond which he can *remain* in any of the lower forms?

4. What is the highest form in which a boy can be placed on admission into the School?

5. What is the latest age at which a boy may remain in the School?

6. Be so good as to furnish, with respect to each form, class, or division of the School, tabular statements corresponding respectively with the accompanying forms B., C., and D.; and with respect to the private pupils of each master and assistant master, a tabular statement corresponding with the form E. Add an explanation of the character of the books read or used, when not sufficiently indicated by the title.

7. Has the head master any power to modify the system and course of study, or to change from time to time the books or editions of books used in the School? If not, in whom are such powers vested?

8. Have the assistant masters any voice, consultative or other, in the direction of the studies of the School?

9. On what system, and whether by seniority or proficiency, or both, does a boy rise in the School; and in determining the rate of his rise, what relative weight, as nearly as can be stated, is assigned to proficiency in the under-mentioned subjects respectively:—classical scholarship; modern languages and literature, including English; English composition; history and geography, ancient and modern; arithmetic; mathematics; physical science? In what manner is such proficiency ascertained, and in what manner is such weight assigned? Are the classes or divisions of the mathematical and of the modern language departments of the School coincident with those of the classical; so that Class N. (say) in classics consists of the same boys as Class N. in French, German, or mathematics?

10. What provision is made for the teaching of each of these subjects, and for promoting the study of them? Can you furnish any information showing to what extent they are severally studied, and with what success? Which of them do, and which do not, form a necessary part of the regular course of study?

11. Is any extra fee exacted for instruction in modern languages, mathematics, or physical science, and if so, what is the amount of such extra fee or fees? Do you consider that the progress of the boys in these studies is in proportion to their progress in Greek and Latin; and if not, to what do you attribute the comparative deficiency?

12. What periodical examinations are held at the School, and in what subjects? By whom are they conducted, and do they extend to the whole School, or to some and what part of it?

13. What scholarships, exhibitions, prizes, or other rewards are established in the School, or in connexion with it, and by whom and on what principles are they severally awarded, and to proficiency in what subjects? State clearly how far the examinations for any such rewards turn upon the regular work of the boys, whether in School or with their tutors; and, in the case of such examinations ranging beyond the limits of such work, point out what the extent of such range is, and how far and in what way boys aiming at those rewards are enabled and assisted to apply to that pursuit, whether in the way of reading or composition, any of the time which they have at their disposal beyond what is required for their school work.

14. Is it compulsory, formally or practically, on every boy to have, in addition to the master attached to his form or class, a tutor or tutors (whether called a private tutor or not), or is it usual, without being compulsory, or permitted (in any and in what cases) without being usual? Are boys (if any) without such tutor at a clear disadvantage, as compared with others, in respect of their studies? What are the tutor's duties? Describe fully the system of instruction or tuition, so far as regards the relation in which each boy stands to the masters and tutors with whom he has to do; state how long it has existed, and what you conceive to be its advantages and disadvantages.

15. Is it the custom in any and in what forms for the boys to construe their lessons to a tutor, either public or private, before they construe them in School to the master? If so, how much time, in proportion to the regular lesson in School, is usually spent in such previous construing?

16. Is the number of boys under the charge or teaching of each master or tutor limited, and if so, how and what is the limit? What is the average number of boys under each master or tutor?

17. Is it the custom for the parent or guardian of a boy sent to the School to select, or for the head master to nominate or recommend, his tutor?

18. Is it practicable, and usual, to any and what extent, to pay attention to individual character, capacity, and mental bias, and to give boys particular facilities for or encouragement in the pursuit of studies for which they may show a special aptitude? Are particular facilities given for the pursuit of studies of a professional character for which special examinations have to be passed, and in which, therefore, special preparation must sooner or later be gone through? If so, please to point out distinctly to what extent, and in what manner, such facilities, if granted in particular cases, are adapted and subordinated to the general principles of the education of the School.

19. Do you conceive that the instruction given by the master in the course of the ordinary work would be sufficient, without supplementary aid, to prepare a boy of good ability for a successful career at the Universities, or for success in the competitive examinations established in connexion with the civil, military, or East India services? If not, would it in your opinion be possible so to improve the ordinary teaching as to make it sufficient for these purposes?

20. Can you furnish the Commissioners with any information showing what scholarships at the Universities, or other distinctions (there or elsewhere), open to general competition, have in each of the last ten years, or during any longer period, been gained by foundation scholars and by boys not on the foundation respectively?

21. Has the School any library to which the boys have access? and if so, under what conditions are they permitted to use it? Has the School any collection of natural history, or any apparatus for experiments in natural philosophy?

22. Is provision made for systematic instruction, elementary or advanced, in music or drawing, or both; if so, what time is allotted for the prosecution of such studies, what is the general course of such instruction in each, up to the highest point at which it is cultivated; what was the number of boys during the last six months of 1860 availing themselves of such provision, and how long had each then been cultivating it at School; are these studies successfully prosecuted?

23. State what means are adopted to promote the religious and moral training of the boys, and to enforce order and good conduct, by the presence and personal influence of masters or tutors, by the help of monitors or prefects, or the co-operation in any other way of the boys themselves, by rewards and punishments, or otherwise.

24. State accurately what, if any, regulations are in force by law or usage on the following points relating to the religious teaching or training of the boys:—

(1.) The system of preaching in the college, chapel, or church attended by the boys. Are the sermons specially addressed to the boys? To whom is the duty of preaching intrusted or confined?

(2.) The confirmation of the boys.

(3.) Their attendance at the church services, and especially at the Holy Communion.

(4.) The observance of Sunday.

(5.) Their religious instruction at the hands of their tutors and in public work in School. State particularly how their religious knowledge is tested and ascertained by their tutors or in any of the public examinations?

25. Are the same offences uniformly visited with the same punishment? If so, give some account of the system, specifying the punishments, and the offences to which they are awarded respectively.

26. Do all offences come before the head master? If not, do any? In the latter case, state what they are, and state in either case, through what channel they are brought before him. Does he inquire into the nature and gravity of the offences which come before him, and does he require evidence of their having been committed? Does he in all cases award, and in any cases inflict, the punishment? Are these duties, or either of them, performed, in any and what cases, by other masters or assistant masters?

27. What powers and duties in maintaining the discipline of the School are assigned to any of the boys themselves? What portion of the School has such powers and duties? and over what portion of the School are they exercised?

28. Do you consider such powers essential or useful to the effective maintenance of school discipline? State the grounds of your opinion. Do they on the whole tend to produce, or to suppress, tyranny of the stronger boys over weaker, and how?

29. What powers and privileges are given to any portion of the School over any other portion of it, either to enforce attendance at games, or to exact personal services of any description? What portion of the School has such powers? Over what portion are they exercised? Are such powers and privileges *generally* in any way detrimental either to health, to the reasonable enjoyment of liberty, or to the opportunities of bodily or mental recreation or study on the part of the lesser boys? Please to assign the reasons for your opinion.

30. Have you known instances of the abuse of the before-mentioned disciplinary powers and privileges? And

do you consider that such instances, where they exist, are likely to come to the knowledge of the masters?

31. During how many weeks in the year are the boys at School?

32. How often, and when, and for how many weeks each time, do the boys go home for the holidays?

33. While the boys are at School, what are the usual holidays or half-holidays during the week?

34. At what hours in winter and summer respectively are the boys required to be dressed in the morning, and to go to bed at night?

35. On regular School days, what is the time allowed for play?

36. What is the acreage of the ground allotted to the boys for their out-door amusements and games?

37. What is the nature of such ground, viz., whether (1) covered or entirely open; (2) paved or field; (3) grass or bare?

38. What is the nature of the ground immediately surrounding such playground, and especially is it occupied by inhabited buildings, or by factories, or is it open?

39. What are the common games or other bodily exercises of the boys?

40. What range is practically (whether by express permission or by customary connivance) allowed to boys over the ground lying beyond the precincts of the School and playground, and to what extent, and for what purposes, do the boys commonly avail themselves of it?

41. What athletic exercises are taught as part of the education, and of these which are extra and which compulsory, either absolutely or with reference to some particular purpose (as swimming in order to have liberty to go in boats)? Are any special teachers appointed to superintend such exercises?

42. Is it, or is it not, the general habit of boys most distinguished for their progress in intellectual studies to distinguish themselves also, or to partake with interest, in the manly games of the School, or is any difference in the tendencies of different intellectual studies in this respect discernible?

43. So far as you can judge of the results in after-life of the education afforded at Rugby, do you consider those results satisfactory? Or is it your opinion that the system in any respects falls short of what a great public School might accomplish in preparing boys for the various lines of life, professions, and employments in which they may engage? If so, will you state what the deficiencies are; whence in your judgment they arise; and how far you think them remediable?

44. Does any alteration in the system and course of education at Rugby appear to you desirable? Will you be good enough to lay before the Commissioners any suggestions on this head which you may think expedient?

RUGBY.

ANSWERS received from the TRUSTEES of RUGBY SCHOOL.*

I.

1. Real property consisting of houses and lands in Middlesex and Warwickshire, yielding rent, and personal property consisting of Three per Cent. Consols, and Three per Cent. Reduced stock yielding dividends. There are no special trusts, to which such property and revenues, or either of them, are subject.

2. See statement A. sent herewith.

3. A surveyor is appointed to watch over the estates in Middlesex, to see that the lessees duly perform the covenants in their respective leases, to examine all plans and specifications, and to see that all the works are properly carried out, and generally (with the receiver) to protect the interests of the charity. He makes an annual report to the trustees at their general meeting.

The rents of the Middlesex estate are received by receivers, appointed under the authority of 17 Geo. 3. cap. 71, rule 7, of schedule, who give security to the trustees to the amount of 4,000*l.* The rents are paid by them to the credit of the trustees' bankers (Messrs. Hoare), and they advise the clerk of such payments, as they are made. The receivers act as the London solicitors to the trustees, and in that capacity examine and approve of every lease, after the terms thereof have been approved by the trustees. They render an annual account to the trustees at their general meeting. This account the clerk examines prior to the meeting of the trustees, pursuant to rule 6, in schedule of said Act. The rents of the Warwickshire estates are received half-yearly by the clerk (who also gives security to the amount of 4,000*l.*), and are paid by him to the trustees' bankers.

A surveyor is appointed to watch over the school-house, schools, and buildings generally, at Rugby. He inspects them annually, and reports to the trustees all repairs or alterations which appear to him to be requisite, and furnishes plans, specifications, and estimates for effecting them. The trustees personally inspect those parts of the premises, where extensive repairs or alterations are reported to be necessary, before ordering them to be carried into effect. Tenders for carrying out the works ordered are then procured. All repairs required in the intervals of the trustees' meetings are first brought under the notice of the clerk, for his sanction. The surveyor inspects all work in its progress, and sees that proper materials are used, and that the work is well done. All bills for work so done are referred to the surveyor for examination, before they are paid by the clerk.

On the day previous to the annual meeting, the trustees nominate two of their body to examine the clerk's accounts, and these attend on the following morning, and examine the accounts, item by item, and compare them with the vouchers. Each voucher, during the progress of the audit, is authenticated with the initials of one of the trustees; the accounts are then cast up. The credit side of the account is compared with the debit side of the banker's book, and the balance appearing in hand by the clerk's account (which comprises all the accounts of the charity), ascertained to agree with the balance in the banker's hands. The accounts are then submitted to the meeting, and signed by all the trustees thereat, and the fact of their examination and correctness recorded on the minutes. The clerk's duties are defined by rule 6, in the schedule of 17 Geo. 3. cap. 71.

4. On the expiration of former leases of a large portion of the houses on the Middlesex estate new leases were granted for 40 years from 5th January 1821, in consideration of fines and extensive repairs. The term of these leases expired on the 5th January 1861; new leases have been or are in the course of being granted of nearly the whole of the premises in the leases of 1821, without fines, but in consideration of repairs. The rents reserved are improved rents, except in cases where the repairs are of a more than ordinarily expensive nature, in which cases rents in the nature of ground rents have been taken.

In all cases the tenants are bound to repair the premises.

No satisfactory answer can be returned as to the system of letting prior to 1821, but it is probable that building or repairing leases had been previously granted.

5. The practice of taking fines on the renewal of the leases of the larger portion of the Middlesex estate appears to have been only adopted on the granting of the leases for 40 years from 5th January 1821, referred to in paragraph 4, authorized by Act of Parliament 54 Geo. 3. c. 131. The principle on which these fines were fixed would appear to be an allowance to the lessee of 10 per cent. on the fines paid and the sum laid out in repairs, as an abatement from the then annual rack value of the premises, whereby that value was reduced to a rent reserved by the lease of about one-half the value.

6. The situation of the Middlesex estate is such that much change has taken place in the value of the houses, in consequence principally of the extension of London westward during the last 50 years. The better class of inhabitants of the private houses has ceased in a great measure to reside in the neighbourhood, and this change has in a certain degree reduced the value of buildings used as shops. The surveyor to the estates gives it as his opinion that the property has depreciated since 1821 probably 30 per cent., though of course the rental is now increased by reason of no fines being taken on the present granting of leases.

7. See statements A (1), and A (2), sent herewith.

8. The 17 Geo. 3. c. 71. gives the trustees a general reference to the Court of Chancery, and they have on several occasions availed themselves of this power.

9. There are none.

* [In these returns no distinction is made between the answers of the Trustees and those of the Head Master, except as to questions 43 and 44, Part III., which are answered by the Head Master individually, as requested.]

Statement A. referred to in answer to Question 3, Part I.

II.

1. In the year 1567, by Lawrence Sheriff, Citizen and Grocer of London, for the maintenance of a grammar school and almshouses at Rugby. It is constituted by the deed of bargain and sale, the will, codicil, and "intent" of the founder, and other documents hereafter mentioned or referred to.

By deed of bargain and sale, dated 22nd July 1567, the founder conveyed certain lands and hereditaments in Warwickshire to two trustees and their heirs, and thereby and by another writing of even date therewith, called his "intent," declared the trusts to be that the trustees should after his decease, with the profit of such premises and with such other money as he should therefore give by his will, cause to be builded near to his mansion-house at Rugby, a convenient school-house and 4 lodgings for 4 poor men, and should repair the mansion-house and cause an honest, discreet, and learned man, being a Master of Arts, if conveniently might be, to be retained to teach a free grammar school in the said school-house, and that after that for ever there should be a free grammar school kept within the said school-house to serve chiefly for the children of Rugby aforesaid, and of Brownsover in the county of Warwick, and next for such as should be of other places thereunto adjoining, and that for ever an honest, discreet, and learned man should be appointed to teach grammar freely in the said school, and the same man, if conveniently might be, to be ever a Master of Arts. That the schoolmaster and his successors for ever should have the same mansion-house to dwell in without anything to be paid therefore, and should have yearly for his salary the sum of 12*l.*; and that four poor men were to be appointed from time to time, who were to occupy the four lodgings so to be built, and to receive each seven-pence per week, and that the said mansion-house, school-house, and lodgings were to be repaired and maintained out of the rent and profits of the premises so conveyed.

The founder, by his will, also dated the 22nd July 1567, bequeathed to his trustees 50*l.* towards the building of the said school-house and almshouses, and by a codicil, dated the 31st day of August in the same year, gave one-third part of his freehold lands and tenements in the county of Middlesex (such lands and tenements then consisting of a close of pasture called Conduit Close in Grays Inn Fields, containing 24 acres) to the same trustees, upon the like trusts. This third part constitutes the source of the present wealth of the foundation.

The property at Brownsover in Warwickshire at the time of the founder's death, which took place in October 1567, was leased to his sister and her husband, John Howkins, at a yearly rent of 16*l.* 13*s.* 4*d.*, and the third of Conduit Close was let at the annual rental of 8*l.*, making the total income of the charity 24*l.* 13*s.* 4*d.*, out of which 12*l.* per annum was to be paid to the master and 6*l.* 1*s.* 4*d.* to the almsmen.

In 1614 an inquisition on the state of the school was held by Commissioners appointed under the Great Seal, which resulted in the appointment of twelve gentlemen of the county of Warwick as trustees for the government of the school and the administration of its revenues.

In 1653 another inquisition was held by Commissioners appointed under the Great Seal, and by an order made by them, and which was confirmed by an order of the Court of Chancery, twelve new trustees were appointed, who were to meet and visit the school and almshouses four times in every year at Rugby. In one of their meetings in the first year they were to establish such orders concerning the freedom of the school according to the founder's intent, and behaviour of the schoolmaster, scholars, and almsmen, as shall be ever constantly kept, unless they or the major part shall find cause to add or alter anything. On any vacancy of schoolmaster or almsmen to appoint and admit new ones, observing the founder's rules if possible. They were to pay the schoolmaster 3*l.* and almsmen 7*s.* 7*d.* quarterly, and out of the remainder to defray repairs, and the overplus (deducting the charges of meeting, which were not to exceed 20*s.* per annum) to be divided between the schoolmaster and almsmen in the proportion of 3*l.* to schoolmaster and 7*s.* 7*d.* to each almsman. If the trustees found the multitude of scholars to be too great for one man's teaching, they were either themselves to find, or enjoin the schoolmaster to provide an usher, and allow him such salary out of the overplus of rents, to be divided as they thought fit.

In 1686 a partition was made of Conduit Close (of which a third was given to the charity by the founder), and a distinct portion thereof was allotted to the charity in severalty.

By an Act of Parliament passed in the 21 Geo. 2, after reciting the inquisition of 5th April 1653 and decree dated 16th May in the same year, a lease of the Middlesex estates to Sir William Milman for 43 years from Christmas 1736, and that the clear yearly income of the charity amounted to 116*l.* 17*s.* 8*d.*, which was applied in payment of 63*l.* 6*s.* 8*d.* to the schoolmaster, and 31*l.* 13*s.* 4*d.* for the relief of the four almsmen, and the surplus (about 21*l.* 17*s.* 6*d.*) was expended in repairs and other expenses incident to the trust; the trustees were empowered to borrow 1,800*l.* on the Middlesex estate at five per cent. in the nature of compound interest, to be repaid on the expiry of the lease, the sum so to be raised to be applied in purchasing certain premises at Rugby, and in adapting same for a school and other the purposes of the said charity; and, if any surplus should remain, to dispose of it as they should deem requisite and expedient. The trustees accordingly raised the sum of 1,800*l.* and applied the same in erecting a new school-house and in other repairs and alterations of the buildings of the charity.

Sir William Milman's lease expired in 1779, and in the year 1777 was passed the statute of 17 Geo. 3. c. 71., which was prepared by Sir John Eardly Wilmot, Lord Chief Justice of the Common Pleas, then one of the trustees of the charity. This Act, in anticipation of the large accession of income which would result to the charity on the termination of Sir William Milman's lease, enacts that the trustees and their successors should be the trustees for selling, letting, leasing, and disposing and managing of the charity estates, and for carrying into execution the rules, orders, and directions set forth in the schedule thereto annexed. It then authorizes the trustees to raise 10,000*l.* to pay off the then existing debts of the charity and for other purposes therein mentioned; and when these purposes should be effected, they were to lay a plan for the disposal of the surplus rents before the Court of Chancery, which was thereby authorized and directed in that and in all cases of doubt, dispute, or difficulty which should arise touching the income of the charity or the construction of the rules, orders, and directions in the schedule of that Act, or to be thereafter made by the trustees, to make such order as the said Court should think fit, which orders were to be final and conclusive to all persons whatsoever. That the trustees shall be incorporated and called by the name and title of "The Trustees of the Rugby Charity, founded by Lawrence Sheriff, Grocer of London," and shall use a common seal. The schedule contains rules, orders, and observations for the good government of Rugby school and charity, and relating to the nomination of masters and ushers, their salaries and qualification, and the provision for them when superannuated. The boys on the foundation are to be instructed free of cost and are to attend Divine Service; and the Act allows in addition to the master's salary, a capitation fee of 3*l.* to be paid to him for each foundationer. The trustees are to meet quarterly and to make rules and orders for the better regulation of the said school and the masters and ushers thereof and of the almsmen. The trustees are empowered to build additional almshouses and to increase the allowance of the almsmen. They are to keep all the school buildings and almshouses in repair, and to pay all rates and taxes in respect thereof. They are empowered to choose a clerk and a receiver, to purchase a fire engine, and to elect eight exhibitioners for seven years at 40*l.* per annum each.

The rental of the Middlesex estate from 5th January 1780 was 1,880*l.* 7*s.*

	£	s.	d.
In 1807 the trustees had in the bank and other sums due to them for arrears of rent	1,219	9	1
Stock in the Three per Cent. Consols -	43,221	7	1
	£44,440	16	2
And their annual income consisted of dividends on the above amount of stock -	1,296	12	9

They therefore applied to the Court of Chancery, and laid before it a scheme for the disposition of the said 43,221*l.* 7*s.* 1*d.* stock, and the said surplus income of 1,730*l.* 17*s.* 0*d.*; and by an order dated 14th April 1808, the trustees were empowered to raise by the sale of Consols 14,000*l.* for building new schools, and other purposes mentioned in the scheme; to pay an additional 2*l.* to the master for each foundationer; to elect 13 additional exhibitioners; to pay to each 50*l.* per annum, and to increase the number of almsmen, and the allowance to each.

ANSWERS.
RUGBY.
The Trustees.

By another order of the same Court, dated 4th November 1809, the trustees were empowered to apply further sums in completing the buildings mentioned in the last-mentioned order, and in purchasing certain property contiguous thereto.

By the 54 Geo. 3. c. 131., after reciting the two last-mentioned orders of the Court of Chancery, the trustees were empowered to purchase certain property at Rugby for extending their buildings; to build a chapel; to appoint a minister thereto with a salary; to build additional almshouses; to increase the stipends of the exhibitioners to 60*l.* each and their number to 21; and to hold the meetings of the trustees on such day as at their annual meeting in the preceding year they shall appoint.

By an order of the Court of Chancery, made on the 1st day of August 1823, on the petition of the trustees, the trustees were empowered to increase the salaries of certain of the ushers of the school; to pay to each of the almsmen 7*s.* per week; to appoint a chapel clerk and verger, and an organist; to erect any additional buildings which they might think advantageous to the school, and to form an accumulation fund, in order to provide against damage by fire.

By an Act of 7 Geo. 4. c. 28., after reciting the last-mentioned order, the trustees were empowered to increase the salary of each usher to 120*l.* per annum, being the present amount of salary now paid to each; to establish endowments or stipends in the nature of fellowships for life, or for any less period, of not less than 100*l.* per annum each, nor exceeding 300*l.* per annum each, for the benefit of ushers who may have served ten years, and head master, who may be removed or may retire, and to apply the net surplus annual income of the charity, not exceeding the annual sum of 1,000*l.*, in payment thereof.

By an order of the Court of Chancery, dated 17th January 1851, the trustees were allowed to pay 3*l.* 13*s.* 6*d.* for the instruction of each foundationer in mathematics and modern languages, to and among the master and ushers of the said school, in such proportions as they shall see fit, in addition to the several salaries and other emoluments payable to the said master and ushers; to pay 63*l.* to two examiners from Oxford and Cambridge; to the librarian 5*l.* 5*s.* per annum; for books for school library 10*l.* 10*s.*; for prize books 16*l.* 16*s.*, and a salary of 20*l.* per annum to the drawing master, and to apply the dividends of the contingency fund (then amounting to 15,000*l.* Reduced stock) towards the general income of the charity. It is further ordered, that no boy be thereafter admitted on the foundation, whose parents or guardians should not, prior to any application for admission, have been resident householders or dwellers in Rugby, or within ten miles thereof, if in the county of Warwick, or within five miles, if in any other county, for two years, or for such additional term, not exceeding four years, as the trustees may judge to be necessary, regard being had to the number of scholars on the foundation, and to the income and expenditure of the charity.

By an order of the Charity Commissioners, dated 4th July 1854, the trustees were empowered to limit the duration of the exhibitions to four years; so that instead of electing three exhibitioners each year for seven years, they could elect five for four years.

By another order of the Charity Commissioners, dated 15th March 1859, the trustees were empowered to erect a Natural Science school; to pay 3*l.* 13*s.* 6*d.* for the instruction of each foundationer in mathematics, modern languages, and the natural sciences, in lieu of the 3*l.* 13*s.* 6*d.* allowed by the last-mentioned order, for his instruction in modern languages and mathematics; and to elect to five exhibitions each year of the respective yearly values of 80*l.*, 70*l.*, 60*l.*, 50*l.*, and 40*l.*, instead of 60*l.* each.

The foundation is not connected with any corporate body, civil or ecclesiastical, other than the trustees thereof.

2. It was originally constituted of a single master and four almsmen. There are now a head master, 7 assistant classical masters, a mathematical master, a writing master, a drawing master, a librarian, 5 fellows, 20 exhibitioners, a chaplain, an organist, a chapel clerk, and a verger, and 12 almsmen.

The head master, with the sanction of the trustees, exercises power over the whole school. He assigns to each master the form which he may think him best competent to teach, and from time to time may remove him to another form, and may make any alteration in the organization, the conduct, and the internal government of the school as he may think fit. He is responsible to the trustees for the management and discipline of the school and the efficiency of the teaching therein, and in the terms of the 17 Geo. 3. c. 71., he and the ushers are bound to take care to instruct the "boys resorting to the "said school in the principles of the Christian religion, "morality, and good manners, and thereby qualify them to "become useful members of the community." He receives an annual salary of 113*l.* 6*s.* 8*d.*, and a capitation fee for each foundationer of 6*l.* 6*s.* (See answer to question 10.) He has the school-house (containing accommodation for 70 boarders) and a large garden and close, free of rent, rates, taxes, and repairs of all kinds, and is allowed to charge for the board and lodging of each boarder in his house 52*l.* 10*s.* per annum (see also the answer to question 10 for other emoluments).

There are also several other boarding-houses (at present seven in number), the privilege of keeping which is confined to the assistant masters; as these are assigned by the head master in order of seniority, they are generally occupied by the senior foundation masters. These houses belong to private individuals. Each house contains accommodation for between 40 and 50 boys, and the master is allowed to charge the same sum for each as the head master. Each of the seven assistant masters receives from the charity an annual salary of 120*l.*, and 6*l.* 6*s.* is also paid to the head master for division among the assistant masters for each foundationer (see reply to question 10). Each assistant master is expected to devote himself exclusively to the duties assigned to him by the head master, and is responsible to him for the discipline and good behaviour of his form, and the discipline and good order of the boys in his boarding-house. He is also required by 17 Geo. 3. c. 71. rule 1 of schedule, to hear the boys under the age of 12 years say their catechism once every fortnight.

The mathematical master ranks in all things as a classical master, and in addition to teaching mathematics is required to take his share in the general school work equally with the other masters. He also receives from the funds of the charity an annual salary of 120*l.* per annum.

There is also allowed for the instruction of each foundationer in mathematics, modern languages, and the natural sciences, a capitation fee of 3*l.* 13*s.* 6*d.* per annum (see answer to question 10.)

The writing master is required to teach writing and arithmetic in all its branches, to such boys as may be assigned to him by the head master. He receives an annual salary of 50*l.* from the charity and the other emoluments referred to in the reply to question 10.

The librarian receives a salary of 5*l.* 5*s.* per annum for performing the duties of his office.

The drawing master is required to teach drawing gratis, to such boys on the foundation as may wish to learn that art, for which he receives 20*l.* per annum from the charity.

Two fellows receive 200*l.* per annum each, and the other three 100*l.* per annum each; but the trustees some time since passed a resolution to the effect that no appointments to fellowships would be made in future, except in special cases.

There are 20 exhibitions, each tenable for four years. Five become vacant every year, of the respective yearly values of 80*l.*, 70*l.*, 60*l.*, 50*l.*, and 40*l.* Each exhibitioner is required to reside at one of the colleges or halls in Oxford or Cambridge during the time required by the regulations of the college or hall to which he may belong, and to produce a certificate of such residence from the head of his college or hall to the clerk before he can obtain payment of his exhibition.

The chaplain is required to perform Divine Service in the school chapel, according to the rites and ceremonies of the Church of England. He receives a salary of 50*l.* a year from the charity.

The chapel clerk, organist, and verger respectively are required to perform the usual duties pertaining to such officers. The organist is also to instruct eight choristers in singing. The chapel clerk receives a salary of 21*l.*, the organist 50*l.*, and the verger 10*l.* per annum from the charity.

The almsmen have no duties assigned to them, save that each is required to attend church on Sunday in his gown. Each has a house and garden free of rent, rates, taxes, and repairs, 4*l.* 11*s.* each per quarter, and two tons four cwt. of coal, and a gown per annum.

The head master and assistant masters are required by the 17 Geo. 3. c. 71, rule 2 of schedule, to be protestants of the Church of England as by law established, and the head master to have taken the degree of Master of Arts in the University of Oxford or Cambridge.

The head master, the ushers or assistant masters, and the writing master are directed by the last-mentioned Act to be chosen, within three calendar months next after any vacancy shall happen, by the trustees or the major part of them present at a meeting to be held for that purpose, and to be removable at the will and pleasure of the trustees or the major part of them present at their annual meeting. The head master is elected after an advertisement has appeared for candidates. Each candidate is required to send 12 copies of his testimonials to the clerk, to be forwarded to each trustee some time before the day of election. Each trustee then makes such private inquiries as he may wish respecting the qualifications of the several candidates, and at the meeting the election takes place by votes of the majority of the trustees. The assistant and the other masters above referred to are generally elected on the nomination of the head master.

The original number of members of the foundation has been increased under the authority of the statutes and orders referred to in the reply to question 2.

3. The government of the school is vested in twelve trustees who have full power to appoint and dismiss of their own pleasure the head master and all the under masters, and to make from time to time such rules and regulations for the government of the school as they shall think proper; in practice however no specified regulations are made, but the whole internal management and government of the school is delegated by the trustees to the head master, who from time to time reports to the trustees at their annual meeting any changes which he may deem to be necessary. They however occasionally, but chiefly on his recommendation, make rules and orders relating to the age at which a boy may enter the school, or continue in it, and at which he may compete for exhibitions; limiting the number of non-foundationers; controlling the charges for their board and lodging; as to the subjects for examination for the exhibitions, &c.

4. See the rules and regulations contained in the schedule to 17 Geo. 3. c. 71.

5. No, save as appears by the statutes and orders referred to in the answer to question 1.

6. These are sent herewith, and see answer to No. 2.

7. The trustees have the power of applying to the Court of Chancery given to them by 17 Geo. 3. c. 71.

8. The school has no visitor or visitors.

9. The instruments of foundation consist of the bargain and sale, will and codicil, and intent of the founder, referred to in answer to question 1. Copies are sent herewith. The probate of the will and codicil, an examined copy of the "intent," and an office copy of the bargain and sale, are in the possession of the trustees.

10. Originally the emoluments of the master consisted of the occupation of a house rent-free, and of 12*l.* per annum from the rents of the charity estates. In 1653 the master's salary had, on gaining possession of the full rent of the Brownsover estate (which before had been withheld), been somewhat increased, and in 1669 there was a further increase, his salary then being from 35*l.* to 40*l.* per annum. In 1778 the whole of the estates of the charity did not produce more than 135*l.* per annum, and the salary of the head master was then 63*l.* 6*s.* 8*d.*, and of the under master 80*l.* per annum; what the head master's emoluments were which he derived from the non-foundationers is not known.

In 1780 there were three assistant masters appointed, one at 80*l.* and two at 60*l.* per annum each, and a writing master at 20*l.* per annum. The head master's salary was increased to its present amount, 113*l.* 6*s.* 8*d.*, and a capitation fee of 3*l.* allowed to him for the instruction of each foundationer, and as the number of foundationers was, in 1781, eighteen, his emoluments from this source would amount to 54*l.*, in addition to what he received from the non-foundationers.

The present emoluments of the masters may be best described under the heads of—

A. Fees for school instruction.
B. Fees for private tuition.
C. Entrance fees.
D. Writing master's fees.
E. Payments by the trustees.

A. *Fees for School Instruction.*

The masters receive 15½ guineas for every boy in the school. This sum is paid for each foundationer by the trustees; for each non-foundationer by his parents.

It was originally intended that out of this the head master should have 6 guineas; and that the remainder should pay the assistant masters of all kinds. Dr. Arnold believed that he could best secure thoroughly good instruction in mathematics and modern languages by having these subjects taught as part of the regular school work by the classical masters in their forms. He had therefore (when the school under him was fullest) nine masters besides himself; gave each of them a form, and required each to teach his own form all that it had to learn. These nine divided between them the 9½ guineas paid by each boy for assistant masters, and also 2*l.* which Dr. Arnold paid out of his own 6 guineas. Each master thus received rather more than 1*l.* 5*s.* 6*d.* per boy.

The making mathematics and modern languages a part of the regular lessons has worked extremely well; the attempt to teach them by the classical masters has, in the opinion of the present head master, failed. Such a system implied that no one was to be appointed a master who would not undertake French, German, and mathematics; and that would have mischievously restricted the choice of masters.

Dr. Tait departed from Dr. Arnold's principle by appointing a mathematical master and modern language master, and by allowing those classical masters who preferred to do so, to hand over the instruction of their forms in these subjects to these gentlemen as their substitutes, and to pay them accordingly. The result was that the whole teaching of mathematics, and most of the teaching of modern languages, passed into the hands of the substitutes and the classical masters nominally received 1*l.* 5*s.* 6*d.* a boy, but had to pay out of this for the teaching of these subjects. In 1858 the whole matter was reconsidered by the masters, and the following arrangement was made by them among themselves for the distribution of the 15½ guineas:—

a. 4 guineas go to the head master, out of which he pays 1*l.* for every boy after the first 50 to his senior composition master; 100*l.* to a junior composition master; 125*l.* to the modern language master.

b. 7 guineas to the 7 senior assistant classical masters up to the maximum given by 320 boys. Of these 7 guineas 1 goes to each of these masters.

One of these classical masters is also the senior composition master mentioned above; another is the master of the lower school mentioned below.

c. 1½ guineas to the three senior mathematical masters, each receiving ½ guinea, but two of them limited to a maximum of 240*l.*

d. 1 guinea to the modern language masters. This, together with the 125*l.* mentioned above (*a.*) is divided between them by special agreement. There are two modern language masters, but two of the classical masters also assist in teaching modern languages.

e. Two guineas remain, out of which, one of the above-named seven masters receives 12*s.* up to a maximum of 192*l.* as master of the lower school. Two additional classical masters receive 15*s.* each up to a maximum of 240*l.*

f. The appropriations mentioned above in (*b.*) and (*e.*) cease when the number of boys rises above 320, and two of those mentioned in (*c.*) cease when the number rises above 457. The excess is called the reserve fund.

Out of this:—

1. Two additional classical masters receive 240*l.* each.
2. One master, who teaches both classics and mathematics, receives 360*l.*
3. The junior composition master mentioned above in (*a.*) takes a low form and receives 300*l.*

The residue of the reserved fund, if any, is at the disposal of the body of masters for school purposes. For instance, within the last three years 500*l.* has been paid out of it towards the building of an additional school, 100*l.* has been paid to aid in fitting up the laboratory, a second school has been made out of an old loft, and a third is rented in the town.

B. *Fees for Private Tuition.*

1. Besides the school fees, every boarder throughout the school, and every boy resident in the town, above the lower school and below the sixth form, though not actually compelled, yet practically finds it necessary to have a classical private tutor at a fee of 10 guineas. This fee is charged to all non-foundationers; but foundationers on application to the head master can have a tutor gratis.

The masters who may take private pupils are: five of the senior masters mentioned (in A. *b.*) above; all, that is, except the composition master and the master of the lower school; the two classical masters mentioned (in A. *e.*) above; the two classical masters mentioned (in A. *f.*) above.

No tutor is allowed to receive payment for more than 50 pupils. Since the choice of a tutor rests with the parents it is not always possible to limit the number of a tutor's private pupils precisely to 50. But if any tutor's number exceeds 50, the fees in excess do not in that case go to him, but to those tutors who take the gratis foundationers mentioned above. The number of gratis foundationers is too large to be paid for in this way. In order to put the tutors who take them on precisely the same footing as the rest, all these pupils are paid for; and if the sum required is small, it is paid out of the reserved fund; if not, it is raised by a

ANSWERS.

RUGBY.

The Trustees.

small tax on all the classical tutors. Thus for last half-year these tutors received 5*l.* 2*s.* 6*d.* instead of 5*l.* 5*s.* for each pupil.

2. The four mathematical masters, three mentioned in (*c.*), one in (*f.* 2.), also take as pupils, and at the same fee of 10*l.* 10*s.*, those whom their parents desire to have extra mathematical instruction.

The senior and the third mathematical masters are limited to 50 mathematical pupils each.

The second mathematical master is also tutor in natural philosophy. In that capacity he is required to teach all foundationers who come to him gratis. But all others pay a fee of 5*l.* 5*s.* if they do not use the laboratory; 10*l.* 10*s.* if they do. He also takes mathematical pupils, but he is not allowed to receive on both of these accounts more than would be paid by 50 mathematical pupils.

The fourth mathematical master (mentioned in *f.*) having a classical form in addition to his mathematical work, is limited to 25 mathematical pupils.

3. There are two modern language masters. Of these the senior has the right of taking as private pupils those whom their parents wish to have additional instruction in this subject; and those also who are so backward as in this respect to be below the point required by their place in the school.

The fee for tuition in modern languages is 6 guineas.

C. *Entrance Fees.*

Every boy pays (the trustees paying for the foundationers) an entrance fee of 2 guineas on first coming to school. This goes to the head master. Every boy also on first becoming a private pupil pays a fee of 1 guinea to the tutor who takes him, and if he learns natural philosophy and requires to use the laboratory, a fee of 2 guineas on first entering the laboratory. Entrance fees however from the pupils in natural philosophy do not go to the tutor in that subject, but to the maintenance of the apparatus.

D. *Writing Master's Fees.*

Every non-foundationer pays 30*s.* to the writing master; out of this the writing master has to pay an assistant; and to pay all fees received on account of the sixth form, and 2*s.* 6*d.* a boy on every boy in the school over the number of 400, to the reserved fund.

E. *Payments by the Trustees.*

The head master receives 113*l.* 6*s.* 8*d.*, and the seven senior assistant classical masters and the senior mathematical master 120*l.* each, from the trustees.

The writing master receives 50*l.*

The drawing master 20*l.*

The head master also receives 50*l.* as chaplain, but it has long been the practice for him to hand this over to the chapel improvement fund.

These are the sources of the payments made to the masters and the regulations by which they are distributed. The result will best be seen by the following balance sheets showing precisely how much was paid to each master during the year Midsummer 1860 to Midsummer 1861. From these balance sheets it will be seen that each master pays certain deductions called taxes. Taxes are levied on the income of every master (not including the writing master, and not including any one whose income falls below 400*l.* a year), by a per-centage on the whole amount, as stated above, adding 12*l.* per annum for every boy in his house, if he has a boarding-house. These taxes pay,—

Three scholarships of 30*l.* and three of 20*l.* held by boys in the school.

Prizes given throughout the school.

The salary of the school marshal.

Printing examination papers, and similar miscellaneous expenses.

To these emoluments ought to be added the profits of the boarding-houses. The head master has a boarding-house, the average number of boarders in which has lately been 72. There are 7 other boarding-houses, the largest had last half-year 50 boarders, the smallest 42, and the average number was 46. The profits of such houses must vary with the management. The masters will endeavour to prepare as near an estimate as they can of the average amount of these profits.

* One of the masters died in the vacation. His place was partly filled by a temporary substitute; partly by other masters. It is now regularly filled up.
B. Boarding-houses.

11. Originally there was only one master. The first assistant master or usher appointed on the foundation appears to have been appointed in the year 1772, though it is probable that assistants were appointed for a long time prior to that date, and paid by the master of the grammar school, as the trustees under the decree of 1653, if they found the multitude of scholars to be too great for one man's teaching, were either themselves to find or enjoyne the schoolmaster to provide an usher. In the application to Parliament in 1748 to rebuild the school, it is alleged that unless a proper school and playground were provided it was feared that the free school which had "for many "years been in great repute, and not only a benefit to the "neighbourhood but of public utility, might be lost and "become useless," which would lead to the inference that assistants had been employed. It appears also from the deed executed by Mr. Richard Elborow, one of the trustees of Rugby School, in 1707, on founding another school in Rugby, that he describes Mr. Holyoak, the then master (whom he appointed as one of his trustees), as "the head "schoolmaster of the Latin school at Rugby," and provides that one of his trustees shall always consist of the head master of the Latin school at Rugby. In 1778 Mr. Chartres was appointed assistant master. In 1780 two other assistant masters were appointed. In 1800 there were five assistant masters, at a salary of 80*l.* per annum each; a drawing master at 20*l.*; a French master at 30*l.*; and a writing master at about 30*l.* per annum (salary and fees). The number of foundationers was then 27, but the emoluments derived by each master from the payments of non-foundationers cannot be ascertained.

When Dr. Arnold became head master in 1828 the number of masters for the three subjects, classics, mathematics, and modern languages, was seven besides himself. He added one more in 1829, and another in 1830. This made 10 in all, and this was the number at the time of his death in 1842, when the number of boys was 375. All these masters took classical forms, and taught all three subjects. Dr. Tait succeeded Dr. Arnold in 1842, and early in 1843 appointed two additional masters, without classical forms; one a composition master to assist himself with the sixth form, the other to teach modern languages to any form, the master of which preferred paying a substitute to teaching that subject himself. In 1844 he made a new form, and gave it to the composition master. In 1845 he appointed a mathematical master, without a classical form; in 1847 another mathematical master on the same footing, and an additional classical master; and in 1849, a tutor to teach natural philosophy to any whose parents wished them to learn it. The total number of masters was therefore 16, of whom 12 took classical forms, 2 taught mathematics only, 1 modern languages, and 1 natural philosophy. The greatest number of boys in the school during Dr. Tait's head mastership was 491, in the year 1847. The number when he left was 433.

Dr. Goulburn was head master from 1850 to the end of 1857. There was no addition to the number of masters during that time, but towards the end the number of boys in the school having diminished, two vacancies were not filled up. The tutorship in natural philosophy had been for some time previously attached to one of the classical masterships. The total number of masters was therefore 13, of whom 10 took classical forms, 2 taught mathematics only, and 1 taught modern languages. The number of boys at this time was 304.

The present distribution of the school income was agreed upon by the masters in 1858. It was then understood that as nearly as possible one classical master should be provided for every 32 boys. For this reason the salaries of the nine assistant classical masters were so fixed as to reach their maxima when the number of boys rose to 320. It was also understood that the number of mathematical and modern language masters should be increased as the money would allow of it. In accordance with this understanding additional masters have been appointed as the numbers rose. We have at present 463 boys; and there are 14 masters taking classical forms, 1 of whom also teaches mathematics; 3 mathematical masters, 1 of whom is also tutor

ANSWERS.
RUGBY.
The Trustees.

in natural philosophy, and 2 modern language masters, making 19 in all.

There is, however, no authoritative rule defining the number of masters, the real limit being the amount of the reserved fund. It is understood to be the duty of the head master to see that the reserved fund is mainly applied to procuring additional masters, as far as it will go.

The present number of masters is enough to teach the school reasonably well. But there can be no doubt that a few more would be a great improvement. It is however felt that it would be questionable policy to lower the salaries any further. Even as it is, though first-rate men can be got, they cannot be got so easily as three years ago. And it would be a very great mistake to lower the standard of the men appointed to assistant masterships in order to make the average size of a form 29 instead of 33.

12. By virtue of the authority committed to him by the trustees the head master is supreme within the school, but the fact that he may at any time be removed by the trustees, at their discretion, makes it always possible to appeal from him to them. He can however always act within the school without referring to the trustees, and it is for them to require him, if they see fit, to rescind what he may have done. His duty is to govern the whole school (every form in which he examines occasionally) and to teach the sixth form. In this latter duty he is assisted by the two composition masters above mentioned.

The duties of the assistant masters are sufficiently indicated by their names as classical, mathematical, and modern language. They are intrusted with a large discretion in managing and teaching their respective forms. They can set impositions and can cane, but cannot flog or expel. The cane however is never used in the fifth form, or the forms above it; and very rarely in any form above the lower part of the middle school.

The head master is appointed by the trustees. The eight assistant masters who receive 120*l.* a year each are also appointed by the trustees, usually on the head master's recommendation. Practically they have always been the seven senior classical, and the one senior mathematical master. The other masters are appointed by the head master.

The assistant masters are, as a rule, men from our own Universities. All are so now except one of the modern language masters, who is a foreigner. There is nothing to compel the appointment of University men, if in any instance the head master saw fit to appoint others. They can be removed by the head master, except the eight assistant masters above named, who could not be removed without a reference to the trustees. In any case it would of course be possible to appeal to the trustees against the head master's decision.

There is no rule or usage providing for superannuation.

13. They were to be taught grammar freely, and by 17 Geo. 3. c. 32. grammar and the Latin and Greek languages, without fee or reward.

A foundation scholar is constituted by the residence of his parents for two years in Rugby, or within 10 miles thereof, if in the county of Warwick, or within five miles thereof if in any other county.

The privileges of foundationers are that the 15½ guineas mentioned in answer to question 10 are paid for them by the trustees; they can have their private tuition gratis, on application to the head master; they pay no fee if they learn natural philosophy, whether they use the laboratory or not; they pay no fee to the writing master or to the drawing master. The trustees also pay on their behalf a charge of 23*s.* per annum made upon every boy, for fires and lights in the schools, and for keeping up the chapel choir. In all other respects they are absolutely undistinguishable from the other boys. Most of them reside with their parents; some are in the boarding-houses. The former are in no way distinguishable from the other town boys, nor the latter from the other boarders.

Originally, all the children of Rugby and Brownsover, and of other places thereunto adjoining, were entitled to the privileges of the foundation. In 1777, the area was extended to any towns, villages, or hamlets lying within five measured miles of Rugby, and in 1780 to those in the county of Warwick, lying within 10 miles thereof. In 1830, owing to the great influx which had taken place, and was likely to continue, of strangers coming to reside in Rugby, for the temporary purpose of availing themselves of the advantages of the foundation for their children, the trustees made an order to the effect that no boy should be admitted on the foundation (without the express sanction of the trustees at their annual meeting), whose parents or guardians shall not have resided for two years within the limits of the foundation. Against this order complaint was made on petition to the Master of the Rolls, who, as no grievance was shown, declined to make any order in the matter. By an order of the Court of Chancery, dated the 17th January 1851, foundationers thereafter are restricted to boys whose parents or guardians should, prior to admission, have been resident householders or dwellers in Rugby, or within 10 miles thereof if in Warwickshire, or within five miles if in any other county, for two years, or for such additional term not exceeding four years, as the trustees may judge to be necessary, regard being had to the number of scholars on the foundation, and to the income and expenditure of the charity; a residence within the limits for two years is now required.

They are excluded from no advantage common to the other boys, and their position as foundation scholars is in nowise distinguishable from that of non-foundationers, and is much more advantageous than it was originally.

No money is paid for a foundation scholar, over and above what is provided for him out of the foundation, save that he pays for his books, and a small charge to an attendant when bathing; and if he lodges in a boarding-house, he pays the same charges for his board as a non-foundationer.

14. The number of foundation scholars is not fixed by any statutes or regulations, and has never been restricted, save in so far as the last-mentioned order of the Court of Chancery prescribing two years' residence has had that effect.

15. He must be under 15 years of age, be able to read the English language, and fit to commence learning the rudiments of Latin, and must produce a certificate of good conduct from his former master. Boys are admitted on the foundation on application to the head master, but should any question arise as to the length of residence by the parent or otherwise, the matter is referred to the clerk for inquiry, who reports the result to the head master. They have always been admitted by the head master on application.

16. No.

17. The admission of non-foundationers is not expressly provided for by the statute, but is clearly contemplated by them in providing for a staff of masters, and an extent of schoo buildings wholly disproportionate to the number of foundationers.

The trustees from the passing of the Act of 1777 to the present time have always considered that the boys on the foundation derive far greater advantages by allowing the master to take boarders into the school than if he were restricted from so doing, and that the objects of the founder's charity are not only benefited by having a master of greater erudition and talents, because permitted to take boarders, but also by the school itself being rendered of higher repute and the whole system of education in all its branches being carried on upon a more extensive and beneficial plan than if it were confined to the boys residing within any prescribed limits. In 1808 this view of the case was urged by the trustees before the master to whom it was referred by Lord Chancellor Eldon to inquire into and report upon a plan or scheme laid by them before the Court of Chancery for the disposition of the then surplus income of the charity, and which had for its object the erection of the present schoolhouse and extensive buildings and studies, and the increase of the number of the exhibitions. The master nevertheless disapproved of that part of the scheme on the ground that having regard to the size and extent of the buildings proposed, and to the number and description of the masters, and to the fact of the exhibitions having been given to non-foundationers as well as foundationers, as he said, it appeared to him that the house, offices, and studies were calculated and designed for receiving boys of a different description and of educating them in a different manner than what was meant or intended by the founder or by the Act of 17 Geo. 3. c. 71., and to the prejudice of the foundationers. The trustees however declined to submit any other scheme, and in 1808 presented a petition to the Lord Chancellor, who, though having this report of the master before him, and having conferred with him personally upon the matter, yet made an order that the scheme be carried into effect. So again the Act of 54 Geo. 3., after reciting at great length the above-mentioned order of the 14th April 1808, and that under the provisons of the Act of 17 Geo. 3. the free boys of the charity were required to attend Divine Service on a Sunday, and that as the then present number of boys who were educated at the said school, including such free boys, amounted to 320, and that the parish church could not accommodate more than 100, and that it was expedient that a chapel should be erected, enacts that the trustees may raise 14,000*l.* for building a chapel and further to increase the number and stipends of the exhibitioners.

The competition for the exhibitions is open to all equally, whether foundationers or non-foundationers.

The trustees have the power to limit the number of non-foundationers. Practically, however, the number of non-foundationers is at present only limited by the accommoda-

tion for them in the boarding-houses. The number of these houses and the number of the boys in each cannot be increased without the permission of the head master, subject to the trustees' approval.

Non-foundationers when once admitted are entitled to be taught at fixed charges.

The regulations in this respect are observed.

18. The ordinary charges of a boy at Rugby are best exhibited by the annexed * specimens of half-yearly bills, which are transcripts of three actually sent home from the school-house at the end of last half year. The exact average of the bills sent home at that time was 65*l.* 0*s.* 9¾*d.* Of the three bills sent herewith, one is the highest, one the lowest, and the other differs only by a few shillings from the average. The fixed and the variable charges are distinguished by reference to a foot note.

The expenses of a boy at any other boarding-house are 2*l.* 16*s.* per annum more than at the school-house, since the other houses put fires into the studies, and charge for them.

All the charges are subject to the supervision and control of the master of the boarding-house, since they cannot be incurred without a note of authorization from him. Authority from home is required to enable a boy to incur any unusual expense, such as new clothes, books not used in school, or the like. And, of course, the same authority is required before a boy can learn any of the extra subjects.

The charges made for tuition in or out of school have been already particularized, except as regards the drawing master, music master, dancing master, and drilling master. The charges for these four masters are entered in the specimen bill now sent.

All money is paid to the boarding-house master, or in case of boys resident in the town, to the writing master, on behalf of the head master. The boarding-house masters and the writing master account for all these monies to the head master, who sees to the distribution of the school income.

* Fixed charges. † Variable charges.

The following Note is appended to the school bills:—

"Any parent who shall be found to have furnished his son with the means of defraying a debt privately contracted, contrary to the established rules, without previously communicating on the subject with the head master will be required to withdraw his son from the school."

With the exception of the charge for study fires, the charges are the same for all the boarding-houses, and for all the boys, except foundationers.

19. Received for instruction and tuition in 1860:—

Half year ending Midsummer.

	£	s.	d.	£	s.	d.
461¼ boys, at 8*l.* 2*s.* 9*d.* -	3,753	8	5¼			
61 new boys, at 2*l.* 2*s.* -	128	2	0			
Entrance and tuition fees of private pupils - -	3,030	13	0			
391¾ non-foundationers, at 15*s.* - - - - -	293	16	3			
				7,205	19	8¼

Half year ending Christmas 1860.

461½ boys, at 8*l.* 2*s.* 9*d.* -	3,755	9	1½			
68 new boys, at 2*l.* 2*s.* -	142	16	0			
Entrance and tuition fees of private pupils - -	2,979	0	6			
395 non-foundationers - -	296	5	0			
				7,173	10	7½
				£14,379	10	3¾

This does not include the money paid to the music, drawing, drilling, or dancing masters. The amounts of these payments could not have been very large. It would be very difficult to recover them now.

20. There are at present in the school 61 foundationers and 6 non-foundationers, who reside with their parents in the town.

The payments made on behalf of these boys are,—

	£	s.	d.
For school instruction -	16	5	6
Fires and lights in schools -	1	0	0
Chapel choir - -	0	3	0
Classical tutor - -	10	10	0
Writing master - -	1	10	0
Bathing men - -	0	2	0
Lists of the school - -	0	2	0
	£29	12	6 per annum.

Of these charges the three first-mentioned are paid on behalf of the foundationers by the trustees. The fee for classical tutors is remitted to foundationers on application to the head master; and they do not pay the writing master's fee, the salary paid to him by the trustees being considered to free them.

They are only required to pay the last 4*s.* Many of them, however, being well able to do it, pay the 10*l.* 10*s.* to the classical tutor.

There is no difference whatever between boys resident in the town and other boys in regard to instruction and the use of the playground.

21. The number of boarders now in all the houses is 396. Of these 73 are in the school-house, 323 in the houses of the other masters. There are seven houses besides the school-house, and they are all full.

By virtue of the authority committed to him by the trustees, the head master has the sole right of authorizing any person to keep a boarding-house and of fixing the number of boarders to be taken into it. In practice, he authorizes none but assistant masters.

Any master who has charge of a boarding-house is responsible for its management as regards the health, comfort, and good order of the inmates. The only rules by which he is bound are that all his boarders must (unless by special permission) be present at dinner at 1½, be in his house at the hour fixed from time to time by the head master for locking the doors, be present at prayers at 9½, and go to bed at 10.

Practically the regularity of the school hours compels a uniformity in the mode of life throughout the school.

Boys resident in the town are subject to the same rules.

22. The domiciliary accommodation is very nearly the same in all the houses.

The boys sleep in bed-rooms of very varying sizes, one containing as many as sixteen, some, but only a very few, not more than two.

Every boy has a study or part of a study.

The assignment of studies and bed-rooms depends solely on the discretion of the masters of the boarding-houses. In this assignment a master would take into consideration school rank, length of time in the school, health, character, and similar circumstances, but no pecuniary considerations could enter in any way whatever.

There is no difference in the rate of charge in the different houses, except that the school-house not having fire-places in the studies does not charge 2*l.* 16*s.* for study fires; the other houses do.

ANSWERS.
RUGBY.
The Trustees.

Boys in the lower school prepare most of their lessons in school under the eye of the master of the lower school. Boys above the lower school prepare all their lessons out of school in their studies.

In no house does any one study contain more than three boys. And in all the houses the boys in the upper part of the school have studies to themselves.

23. The scale of diet is uniform, but not defined by any rule.

At 8½ breakfast; bread and butter; tea, coffee or cocoa.

At 1½ dinner; meat and vegetables, pudding or cheese; sometimes soup; beer to drink.

In the evening, tea, like breakfast.

At 8½ supper; bread, cheese, and beer.

24. The rate of charge for board and lodging does not vary.

25. The boarding-houses as they fall vacant are generally now assigned to the assistant masters in order of seniority, and whatever profits are obtained from them must be considered as part of the emoluments of the masters to whom they are assigned.

26. No.

27. The furniture of the boys' studies is provided by themselves. The general rule is that each incomer should buy his furniture at a valuation from the outgoer. The purchase money, together with repairs or additions, is charged in the bills, but the master of the house sees that they do not exceed a fixed sum. The studies are very small rooms, a study for one boy not usually exceeding seven feet square, so that the furniture cannot be much. The boys do not pay for any other furniture.

28. The selection of a boarding-house rests with the parents. The school authorities do not recommend.

29. Besides the head master, seven masters (five of the classical, one of the mathematical, and one of the modern language masters) at present keep boarding-houses. The rest cannot obtain any, only because it is not thought expedient to license any more. None are kept by any but masters; but two boys in peculiar and exceptional circumstances, by permission of the head master, board with one of the medical attendants of the school.

30. No boarding-house whatever can be opened without the license of the head master.

31. Slightly over three years. There does not appear to be any difference in the average length of stay between foundationers and non-foundationers. But the two extremes of very long stay and very short stay would be found among the foundationers.

III.

1. There is no age fixed authoritatively as the earliest at which a boy can be admitted into the school. The masters would in most cases refuse to take boarders under 12. Boys resident in the town would be admitted earlier if competent to commence learning Latin.

A boy cannot be admitted after he is 16, unless he is fit to enter the fifth form (see School list, page 9, rule 1).

2. He must be, in the judgment of the head master, competent to commence learning Latin.

3. A boy cannot remain in the lower school after 16, nor below the sixth form after 18 (School list, page 9, rule 3).

4. The fifth form.

5. Nineteen (School list, page 9, rule 5).

6. Sent herewith.

7. Yes.

8. Every assistant master has a large discretion in determining what books he will use in teaching his form. But he cannot alter the character of the lessons, as from classical to mathematical, or vice versâ. The body of assistant masters have also in practice a consultative voice in the direction of the studies of the school in general. It is the practice for the head master to call them together occasionally (on an average once a month), and then every rule or usage of the school can be brought under discussion.

9. The school is at present organized on the following plan, the details of which are varied from time to time, but the general outline is preserved.

1. The upper school, containing:—
   - The sixth form,
   - The twenty,
   - The fifth form,
   - The lower fifth, in two parallel divisions.
2. The middle school, containing:—
   - The first upper middle, in two parallel divisions.
   - The second upper middle, in two parallel divisions.
   - The third upper middle, undivided.
   - The lower middle, in two parallel divisions.
3. The lower school, containing:—
   - The upper remove, } under one master.
   - The lower remove, }
   - The fourth form, }
   - The third form, } under one master.
   - The second form, }

The parallel divisions into which some of these forms are divided stand not one below the other, but side by side. They have different masters, but they do precisely the same work, and boys are promoted not from one into the other, but from both into the form above. The purpose of this arrangement is that boys should not have too many forms to pass through in going up the school.

These are the classical forms. The classical masters also teach divinity and history. In these subjects they are bound by *a cycle*, which extends over three years, and which is so arranged that the great bulk of the school is working at the

same periods at once, and if a boy is promoted, the continuity of his work is not broken. This cycle is annexed.*

For teaching mathematics and modern languages the school is broken up into five divisions; namely,

1. The sixth.
2. The rest of the upper school.
3. The first and second upper middle.
4. Third upper middle and the lower middle.
5. The lower school.

Each of these divisions is sent to the mathematical or modern language masters as a whole, and is by them subdivided into divisions called sets, thus :—

—	Boys.	Mathematical Sets.	Modern Language Sets.
Sixth form	43	4	2
Rest of upper school	128	7	5
First and second upper middle	140	7	5
Third upper middle and lower middle	86	4	3
Lower school	66	The mathematics of the lower school, 5 is in the hands of the writing master.	4

By this means we avoid the difficulty that would arise if each form were sent by itself to the mathematical or modern language masters. The groups above given are sufficiently large to be each redistributed without inconvenience; and of course, when a boy is promoted out of one group into another, he goes into the set for which he is fit in the new group. Thus a boy in the fifth mathematical set of the middle school would, when promoted into the upper school, not go into the lowest mathematical set of that school, but into the sixth, or it might be the fifth.

Boys that learn physical science do not as a general rule learn modern languages. We find that it is not expedient to allow them to learn too many subjects. These boys form two sets, one in the upper school, one in the middle and lower.

ARRANGEMENT of the SCHOOL for NATURAL PHILOSOPHY LECTURES.

—	Sixth Form, Upper School.	Middle School.
Tuesday	9½ to 10½	—
Wednesday	—	2½ to 3½
Thursday	9½ to 10½	—
Friday	—	2½ to 3½

The Laboratory is open from 9.30 to 4 every day except Monday.

These time tables show precisely how the teaching of the different subjects is organized.

Rank in the school is determined by the classical forms, but promotion in those forms does not depend only on the classical lessons. As a rule the same marks are given for a mathematical or a modern language lesson as for a classical; and the supremacy of the classics is maintained by the greater number of lessons given to that subject.

Marks for each lesson are given by the master who hears the lesson.

Promotion, however, does not depend solely on these marks. At the end of each half year the whole school is examined, and the marks given for the examination are put on a level with the accumulated marks of the half year. The proportion of marks for different subjects is about the same in this examination as throughout the half year.

10. This question is already answered, partly in answer to question 9, partly in answer to question 6.

11. No extra fee is required for instruction in modern languages or mathematics. The progress of the boys in these studies does not fall below their progress in other studies, if the proportion of time given to each subject be considered.

12. The sixth form are annually examined in June by examiners appointed by the Vice-Chancellors of Oxford and Cambridge. The rest of the school at that time, and the whole of the school in December, are examined by the masters. The examinations cover all the subjects taught in the school.

At the June examination all the boys in the upper school below the sixth form are examined together. They have the same papers, and the answers to each paper are looked over by the same examiner. The marks gained by each boy are added together and are called his examination marks; to these are added the marks that he has accumulated during the half year, which are called his form marks. As far as the examination is concerned all the boys are on the same level. But, in the form marks, the boys in the upper forms are allowed an advantage over those in the lower forms, to represent the greater value of their ordinary work. Thus, if the best boy in the fifth obtained 5,000 form marks, the master of the twenty would add enough to all the form marks of his boys to bring the lowest up to 5,000, unless he considered that this lowest boy had been disgracefully idle, in which case he would take the next lowest. There is thus no competition in the form marks. But there is a very sharp competition between the forms for examination marks, and it constantly happens that in the final result boys in the fifth will stand higher than boys in the twenty; and boys in the lower fifth, higher than boys in the fifth. As soon as the examination is over, the boys are arranged in the order of the marks (examination marks and form marks added together) without respect to their forms. Such a list, the technical name for which in the school is the long list, will be found in pp. 57, 58 of the school list for Midsummer 1861. This list determines the places of the boys at the beginning of the next half year. It will be observed that the parallelism of the two divisions of the lower fifth is still preserved.

Precisely the same plan is followed in examining the middle school. Here, since almost all the forms are in parallel divisions (at the examination last June all were in parallel divisions, the third upper middle having been created since) there are two lists side by side, not one comprehending all the boys. For the competition is always between each form and the form above it, not between each form and the form beside it. The long list of the middle school, as settled at the last June examination, will be found at pp. 59–62 of the last Midsummer school list.

The lower school is not considered to be sufficiently advanced for such a competition.

At Christmas, the forms are examined separately as forms. The masters are formed into committees of two, and each committee examines two forms, one high in the school, and one low. These committees are generally so distributed that no master examines his own form except the head master, who, with another as his colleague, examines the sixth. The two modern language masters examine the whole school in modern languages. The four mathematical masters examine the whole school in mathematics, and also take the entire charge of the examination of the lower school.

At this examination, class-lists of honour are made for each form, containing the names of those who have done well in that form. There are six such class lists, namely, divinity, classics, history and geography, mathematics, modern languages, and natural philosophy. A first class in classics counts 4; in any other subject, 2: a second in classics, 2; in any other subject, 1. Every boy who can make up 4 in this method of counting gets a prize.

The class lists for last Christmas will be found in the school list, pp. 17–30. Opportunity is taken at the Christmas examination to encourage boys to study by themselves. At this examination they are required to take in all that they have done in form; but they are also allowed to take in books read by themselves, and marks are given for these extras (as they are called), which contribute towards getting the above-named honours. Appended is a

list of the extras taken in by each boy in the sixth form this December, and a table showing the extras taken in, some by one boy, some by another, in every form in the upper and middle schools.*

ANSWERS.
RUGBY.
The Trustees.

13. The rewards in the nature of scholarships, prizes, &c., given in this school, are as follows:—

I. The exhibitions mentioned in Christmas school list, page 4.

The examination for these exhibitions is conducted by examiners, nominated by the Vice-Chancellors of Oxford and Cambridge. The boys are examined,—

a. In the work of the half year, classics, mathematics, modern languages, divinity, and history.

b. In some classical subject (*e. g.* a Greek play), prepared entirely by themselves.

c. In classical composition of the usual kinds.

d. In translations from Greek and Latin of passages not before seen.

II. The scholarships mentioned in Christmas school list, page 4.

The subjects vary from year to year, but are always prepared at home in the Christmas holidays.

III. The Christmas prizes mentioned in the answer to the last question.

IV. Three prizes given at the end of each half year to each form, for the best form work throughout the half year.

V. The various prizes mentioned in school list, pp. 6, 7, 8. All the work for these prizes is done out of school, unaided.

14. Every boy above the lower school, and below the sixth form, must have a classical private tutor (such as are those that are referred to in answer to question 10, Part II.), whose pupil he continues to be, as a general rule, throughout his stay at the school.

The work which the private tutors do with their pupils consists in,

First, two lessons a week in some classical author.

Secondly, looking over and correcting some of their exercises.

Thirdly, any special work, which in particular cases they may think necessary.

At the beginning of the half year, the tutors agree upon a definite portion of some classical author, to be read by the upper school (not including the sixth), and another portion to be read by the middle school. In teaching these each tutor takes his pupils as he would take a form, making one form of all his upper school pupils, and another of all those who are in the middle school.

The exercises to be looked over and corrected are some of those which are set by the form master, and they are finally shown up to him, both in the corrected and the uncorrected state.

The special work is, of course, left to the tutor's discretion; but it generally consists of extra composition.

The chief advantage of requiring every boy to have a

EXTRA SUBJECTS FOR FORMS BELOW THE SIXTH
CHRISTMAS 1861.

Form.	Classics.	Divinity.	History and Geography.	Mathematics.	Modern Languages and Natural Philosophy.	Lines.
The Twenty -	Livy, Bk. IX., 35 chapters.	2 Books of Samuel, with Nehemiah and Ezra; Blunt's Scriptural Coincidences, pp. 1-218; Trench on the Parables, Part I.-X.	Arnold's Rome, chapters xliii., xliv., xlv., xlvi.; Merivale's Fall of the Roman Empire, 250 pages; Robertson's Chas. V., chapters i., ii., iii., and iv.; Thierry's Norman Conquest, vol. II.; c. i., ii., iii., iv.; Grote's Greece, Peloponnesian War, 270 pages; Mackintosh's England, 1st, 230 pages; Hughes' Manual of Geography, chapters lxix.-xcviii., cxvii.-clvi., with small print of cxxxii.	According to set -	Thierry's Norman Conquest, 250 pages; Thiers' Consulat, 270 pages.	Horace' Odes 500, Virgil, 350, Shakspeare, 350, Tennyson, 500, Milton Lycidas, l'Allegro, and 100 of Paradise Lost; Scott, 650, Sophocles Ajax 300, Byron (Siege of Corinth) 400.
The Fifth -	As above -	Blunt's Undesigned Coincidences, Part II.; Horæ Paulinæ, one third; Trench on Parables, one third; Samuel; I. and II. I. Kings.	Macaulay's England, c. ix., x., xi.; Arnold's Rome, vol. III.; Grote's Greece, vol. VI., 300 pages; Schiller's 30 Years War; Prescott's Mexico, vol. I.; Hughes' Physical Geography, Introduction; Europe, Maps.	Ditto - -	- - -	300 of Sophocles, 400 of Virgil, Milton, or Shakspeare, 450 of Horace, 600 of Scott.
Second Fifth, Mr. Ansty's division.	As above -	2 Books of Samuel, with 53rd chapter of Isaiah, by heart; ditto Kings, ditto; Ezra, Nehemiah, and Esther, with 13th c. of St. Matthew, by heart.	The Student's Hume, or any portion of English History from beginning to 1200 A.D., about 200 pages; Arnold's Rome, c. xliii.-xlv., 196 pages; Macaulay's England, c. ii.-v., 250 p.; Clough's Plutarch's Lives, 220 p.; Hughes' Manual, Great Britain, c. iv., pages 69-125, with Map.	Ditto - -	- - -	Milton or Shakspeare 400, Scott or Tennyson 600, Horace Odes 600, Virgil 400, Greek Iambics 300, Homer 300.
Second Fifth, Mr. Arnold's division.	Aristophanes Vespæ.	2 Books of Samuel, with Isaiah, c. liii., by heart, or 2 Books of Kings, with ditto by ditto; Ezra, Nehemiah, and Esther, with selected chapters from St. Matthew or St. John, by heart; or the Acts in English, or half the Acts in Greek.	Any portion of English History up to 1200 A.D., generally either the Student's Hume, or Thierry, or Macaulay's England, or Arnold's Rome; or Clough's Plutarch; Hughes' Manual, c. iv., p. 69-125, with maps, one finished out of school, a second blank for examination.	Ditto - -	- - -	As above.
Upper Middle, 1, both divisions.	Horace, Odes, Book II.	120 pages of Stanley's Palestine; 150 pages of Blunt's Coincidences.	150 of Arnold's Rome; 150 p. of Creasey's Battles; 200 of Malkin's Parallels; 50 pages of Hughes' Geography.	Ditto - -	- - -	250 of Virgil or Shakspeare, 350 of Horace, 500 Scott.
Upper Middle, 2, both divisions.	As above -	Wilberforce's Five Empires, pp. 1-126; Blunt's Reformation, c. v.-ix.	Prescott's Mexico, Bks. II. III.; Macaulay's Essays (Clive and Warren Hastings); Geography of India, in Hughes, c. x., with maps.	Ditto - -	- - -	450 Macaulay, 400 Scott, 250 Shakspeare or Milton, 200 Latin.
Mr. Moberly's Form.	As above -	Psalm civ. and cvii., by heart; the substance of cv. and cvi.	Prescott's Mexico, 120 pages; Wilberforce's Five Empires.	Colenso's Fractions, every third sum.	Thierry's Norman Conquest, 100 pages; Mignet's Marie Stuart, 100 pages.	Ancient Mariner.
Lower Middle, both divisions.	Homer, Iliad, VI.	1st or 2nd Book of Samuel.	Markham's England, Henry VII., Commonwealth, or Wilberforce's Five Empires; North America in Hughes' Manual.	According to set -	According to set -	300 of Scott or Macaulay.

NOTE.—A boy is allowed to take in any three extras besides the classical.

private tutor consists in the permanence of the connexion. A boy passes from form to form, and in doing so is necessarily handed on from one teacher to another; and it may often happen that he only stays a quarter of a year under one form master. The form master, therefore, cannot know enough about him, to be always able to give him the best advice. But the same tutor has charge of him throughout, and ends with knowing him well.

The tutor sends home his character, and corresponds with his parents. In all difficulties, he naturally goes to his tutor. And if a serious complaint is made against him, the head master would confer with his tutor before deciding on his case.

Further, the system has great advantages for the masters. The master in a low form will find little in his form work to keep alive his knowledge of more advanced scholarship, but he will have pupils all over the school, who will, therefore, keep his knowledge fully employed. And this reacts upon all his teaching, and makes him better able to handle his form. Nor is it a disadvantage to the master of a high form, to be forced to work with boys very much lower in the school, and so to keep fully before his mind the more elementary parts of classical scholarship.

The danger of the system is, that boys may get too much help, and the work in form may be robbed of all reality as not being really done by the boys themselves. This is met by requiring that the tutor shall not assist the boy in preparing the school lessons at all.

On the whole the system works exceedingly well. It was first introduced here by Dr. Arnold in 1830, and has gradually spread over the school.

15. The private tutors are not allowed to interfere with the school lessons.

16. There is no limit absolutely prescribed, either to the number of private pupils under a tutor, or to the number of boys in a form. But as a tutor is never paid for more than 50, the number of pupils never exceeds that number much. And the number in each form is arranged according to the proportion of boys to masters, as nearly as it can be. The average number of boys under a master is now 33. The average number of pupils under a classical tutor is 45.

17. If the master of the boarding-house be a classical tutor, he is the classical tutor of all the boys in his house; if not, the parents may select; but in practice they usually, though not always, leave the choice to the boarding-house master.

18. It is not found practicable to do much more than to allow boys to have extra private tuition in particular subjects. Thus a boy can have extra private tuition in mathematics or modern languages. And the time at the disposal of the boys is generally enough to permit this. But where it does not appear that the boy has time enough, he is sometimes allowed to drop the two lessons a week which he does with his classical tutor; the tutor's fee in that case being reduced from 10*l.* 10*s.* to 5*l.* 5*s.*; and boys in the fifth form or above it are sometimes allowed to drop Latin verses. This however is not permitted without the concurrence of the head master, the form master, and the tutor; since it is found, that, whatever value may be attached to the writing of Latin verses for its own sake, it is certainly invaluable as an instrument of teaching Latin, and those who leave it off begin soon to fall behind the others in their classical lessons generally.

The system of extras at the Christmas examination described in the answer to question 12, and several of the prizes enumerated in the school list, pp. 7, 8, must also be considered as affording encouragement to the pursuit of studies for which any boy may have a natural aptitude.

19. The instruction given in the ordinary course is quite sufficient without supplementary aid to prepare a boy of good ability for a successful career at the Universities, and is not only sufficient, but is probably as good as could be obtained. So also it is sufficient, and in most cases probably the best, to prepare a boy for the competitive examinations for the Civil Service in India; but in this case the competition being open to young men of 21, boys coming straight from school, and therefore not over 19, will not be often successful. At that age two years make a great difference. Only one candidate for these appointments has ever gone to the examination straight from Rugby, and he passed twenty-ninth out of 80.

The competitive examinations for the Civil Services of this country, and for the Army, are of a more special character, and most boys, even of good ability, would be decidedly the better for six months' reading with a private tutor just before going in. But with that proviso, the public school system is the best preparation to fit boys of good ability for these examinations also. To supply this special teaching to boys still remaining at Rugby would interfere too much with the ordinary system.

20. The list sent herewith. [See appended list.]

21. There is a tolerable library, a catalogue of which is sent herewith.

The boys can go into it twice a week, for an hour; when the writing master is there to help them to find any books they want, and to see that they enter in a register, provided for the purpose, the books they take out.

There are also libraries in each boarding-house, kept up by a subscription of 10*s.* a year from each boy in the house. This is managed by the sixth form boys, but is readily accessible to all.

The natural philosophy tutor has given an account of his apparatus and laboratory with his papers B. C. D. E.

22. A drawing master is appointed, who attends on Saturdays for two hours in the morning, and two in the afternoon, and sometimes an hour in the evening. Prizes are given for drawing, and marks enough to make the difference of a place or two at the end of the half year.

A music master is also appointed, and boys attend him to learn singing, and can also be taught to play.

The number of boys learning drawing in 1860 was 49, and the number learning music was 42.

23. The masters and tutors are easily accessible to the boys at all times, and become very thoroughly acquainted with them. Pains have been taken by successive generations of masters to foster the public opinion in the school itself, which acts very powerfully on the members of it. The sixth form boys, though they are in every way treated as boys, are considered by their schoolfellows as the natural guardians of the good name of the school, and their influence is wholesome and powerful.

The religious and moral training of boys depends not only on the rules by which the school is governed, but still more on the spirit in which those rules are administered. The masters at Rugby feel that the moral and religious training of the boys stands above everything else, and it is well known throughout the school that this is their feeling.

24. 1. One sermon is preached every Sunday afternoon by the head master. This has been the practice since the time of Arnold.

2. The duty of preparing boys for confirmation devolves on their tutors or boarding-house masters. The preparation usually occupies two hours a week for five or six weeks before the confirmation. Besides this, for about the same length of time, the head master addresses the candidates twice or thrice a week in the school chapel. These addresses follow the lead of the Church catechism, containing both practical and doctrinal comments on it.

3. All the boys attend the services in the chapel on Sunday. These services consist of the Litany preceded by a hymn at 8½; the Morning Service and the Communion Service at 11½; the Evening Service and sermon at 4.

The Holy Communion is administered on the first Sunday in the half year, and on the last, and at least twice, sometimes four times between. Attendance at the Holy Communion is absolutely free.

On the Saturday evenings before the administration of the Holy Communion it is the practice for the head master to make an address in the chapel to all who choose to come. No one need come that does not like, but as a general rule, all those who intend to receive the Holy Communion are present.

4. No absolute rules are laid down for the observance of Sunday; but the masters would check any employment or amusement that interfered with it. The lessons on the Monday morning are always on the Greek Testament or Bible.

5. The religious instruction of the boys in school consist of,—

a. The lessons already mentioned in forms B, C, D.

b. Sunday lessons every Sunday morning from 10¼ to 11¼.

c. Private work in divinity prepared for the examinations already described.

d. Examinations at the end of every half year, with a large number of marks assigned to the subject.

25. The punishments in use are:—

1. Solitary confinement for an hour or two hours. Only used in the lower school.
2. Caning on the hand. Used both in the lower and middle school, but in the upper forms of the latter very rarely.
3. Latin or Greek to be written out, or translated, or learnt by heart; used throughout the school.
4. Flogging.

ANSWERS.

RUGBY.

The Trustees.

5. Request to the parents for removal.
6. Expulsion.

There is no code of punishment. But care is taken to proportion the punishment to the offence.

The first three punishments are inflicted by the assistant masters, if they think fit. The last three are reserved for the head master.

26. All offences do not come before the head master. The assistant masters use their discretion in regard to the offences which they will report to him : but in practice all very serious offences would be so reported. Offences are also reported to him by the sixth form, if they are such as the sixth form either cannot, or think it better not to correct themselves.

The head master always carefully inquires into every offence so reported, and never punishes unless on clear evidence.

In all cases brought before him the head master awards the punishment and also inflicts it.

27. The sixth form have powers to enforce obedience to school rules. If boys are seen by any member of the sixth form going out of bounds, or smoking, or breaking the school rules in any other way, or disobeying any temporary order given out by the head master, it is his duty to punish them, and in extreme cases to report them to the head master.

It is also the duty of the sixth form in rotation to keep order in school while names are called over, to call over names in their own boarding-houses at dinner, at locking up, and at evening prayers. They also read prayers in the evening if the master of the boarding-house be absent.

The check on the power of the sixth form consists in the right of appeal. All boys may appeal if they please from any member of the sixth to the whole form, and the form is by no means unwilling to listen. All boys may also appeal to the head master. Such appeals are not frequent, but they are made sometimes, and always receive the most careful consideration.

28. On the whole, the intrusting of such powers to the sixth form contributes much to the efficient working of the school. It represses tyranny better than any other plan that could be devised. It enforces discipline without necessitating constant and therefore mischievous supervision. It gives the whole school a sense of self-government which tends to elevate the general tone.

The boys have a kind of constitution of their own, by which they make rules for games and for the management of the school close, and, subject to the approval of the head master, levy taxes for these objects. The natural head of this organization is the sixth form, and the whole school is led by that form and reacts upon it. For this reason the sixth form is never felt to be an alien body by the rest.

The only objection to this use of the sixth form is, the danger of making boys too soon into men; but this danger is not such as to overbalance the advantages. And though some boys may sometimes be betrayed into a little self-importance of manner, this rarely lasts long.

29. The sixth form alone have the power of fagging, and their power in this respect does not extend above the middle school. The personal services included under the name of fagging amount to little more than carrying messages. The fags also dust the studies of the sixth and put them in order; but this is not a heavy labour, as the sixth form are not more than a tenth of the school, and in most houses these studies are first swept by the servants.

43. 44. *Rev. F. Temple, D.D., Head Master.*

The sixth form have also the power to compel all boys to take part in the school games who are not exempted by authority. Practically, this kind of fagging is almost confined to running hare and hounds and brook-leaping, and the masters exercise a supervision over this to prevent any risk to health.

The advantage of these rules is that, first, in all large assemblies of boys, if the freedom of the public school system is allowed, the stronger will command the services of the weaker, and it is better to acknowledge this and regulate it than leave it to take its own course. Secondly, that it contributes to bind the school together, and makes the discipline much easier and more wholesome. Thirdly, it keeps up the more athletic games, and saves many an indolent boy from giving way to constitutional laziness.

30. Instances of the gross abuse of the power of fagging would be sure to come to the knowledge of the masters if they were at all frequent. But the sixth is too small a body to hold its powers by force, and practically is obliged, and as a general rule is desirous, to consult the public opinion of the school.

31. The boys are at school 37 weeks in the year.

32. Boys go home for the holidays twice a year, for seven weeks, beginning just before Christmas, and for eight weeks beginning just after Midsummer.

Besides this, every boy is allowed leave of absence on the request of his parents, once in a half year, from noon on Thursday till night on Saturday, or from noon on Saturday till night on Monday. About a third of the school avail themselves of this privilege.

33. There are no whole holidays. The usual half holidays are the afternoons of Tuesday, Thursday, and Saturday, and once in three weeks, also, that of Monday. Copies, however, are looked over in the middle school on Tuesdays and in part of the upper school on Tuesdays and Thursdays. Boys in the lower school have lessons with the writing master on those afternoons.

34. During about four weeks before the Christmas holidays and five weeks after, the boys rise at 7, breakfast at 7½, and go into school at 8. During the rest of the year they rise at 6½, go into school at 7, and breakfast at 8½ They go to bed at 10.

35. The length of time allowed for play varies much with the place of a boy in the school. During a whole school day a boy in the middle school will have three school lessons requiring preparation; one with his tutor also requiring preparation; and one school lesson not requiring preparation. The play-time, after deducting an hour and a half for meals, would be two hours, between 7 and 7. After 7 there would be, perhaps, work for another hour or two for the next day. Including the time required for preparation, the whole time of working would be between eight and nine hours. But the work is never more than this, and usually much less. The half holidays leave a good deal of time at the boys' own disposal.

36. 13 A. 2 R. 8 P.

37. 1. Entirely open. But there is a covered racquet court just built.
2. Field, planted with rows of trees.
3. Grass.

38. The ground is surrounded on one side by the school-house and schools, on the opposite side by a field occupied by the head master, on the remaining two sides by public roads, along one of which on its opposite side is a row of ordinary houses.

39. The common games are cricket, football, racquets, fives, and runs over the country.

Gymnastic bars, swings, climbing ladders, and ropes, are put up in one part of the close, and are much used.

Once a year the boys subscribe to give prizes for running, leaping, hurdle racing, and other similar contests. And for some time before the day the intending competitors practise very assiduously.

40. The railway station and certain parts of the town are out of bounds ; there is otherwise no limit to the distance that the boys may go, except that imposed by the necessity of being back for lesson or calling-over. The time of the lessons is given by the time tables. On the half holidays there is a calling-over in the school once or twice in the course of the afternoon, according to the time of locking up ; the times of the calling-over are so fixed that no absence in the country can exceed two hours.

41. No athletic exercises form a part of the system of education. There is a drill-serjeant appointed, who drills all who are sent to him by orders from their parents.

42. It is certainly the general custom for boys most distinguished for their progress in intellectual studies to take interest in all the games. No difference between different intellectual studies in this respect is observable.

43. As far as I can judge of the results in after-life of the education given at Rugby, they are as good as can be expected from a great public school. I do not mean that the reality is equal to the ideal which the system itself suggests ; that is not to be obtained from any human institution, and certainly not from our school. Nor do I mean that our work is incapable of improvement. But I do not think that any sudden change will make the results better than they are. The education of boys at school depends in reality on three things ; on the influences of their homes ; on the traditions of the school derived from the past ; and on the administration of it at the present time. The first of these three is quite out of our reach, and yet it is the most powerful of all ; the second is only capable of very slow modification through the third ; the third alone is in our hands. Improvement therefore must be slow.

The deficiency of Rugby is the want of more masters not inferior to those that we have. The spirit of the school is good, the masters work hard, heartily together, and with a high aim. But the power of making what is taught tell with force upon the pupils, depends much on their number. A master cannot give thorough attention to more than a certain number of boys ; and the younger they are the smaller that number will be. When the forms get beyond a manageable size, the indolent lose the spur of being constantly called up, and slip into downright idleness, and all, even the quiet and diligent, are apt to do their work loosely and inaccurately. The discussion of the best system of instruction belongs to

the next question. But meanwhile it may be safely asserted that a very large part of the true value of a classical education is lost if close and accurate work is not made indispensable throughout. The mental discipline of learning a dead language is very great, if the learner is constantly compelled to attend to minute details. But it is much diminished if the learner be permitted to guess at the general meaning of a passage, and leave all the nicer shades of meaning out of sight. In this respect I cannot say that I think our system perfect. The instruction is not so precise, the knowledge is not so accurate as it ought to be, and nothing will correct this but more masters. We have now 14 masters to 463 boys, giving 33 boys to a form. The teaching would be much improved if we had 4 masters more, and the average number in a form were thus reduced to 26.

The two obstacles in the way of this improvement are, that we have not the means of paying more masters, and that if we had we have not a sufficient number of school-rooms for them to teach in.

It might seem easy to remove the first obstacle by engaging masters at lower salaries. But this would be an improvement in one way, at the cost of a serious damage in another. Good men cannot be got below a certain price. The work is very severe, and a man must have the means of saving money against the time when he can continue such work no longer. There is probably no employment which exhausts a man so thoroughly as teaching ; and this is well known, and men will not enter on such a profession unless they have the prospect of providing for independence when retirement from work has become necessary. Moreover, to be a thoroughly good teacher requires a combination of many qualities ; and the men who possess that combination are proportionally rare. In consequence their price is high.

Men would, no doubt, come for low salaries at first, if they had prospect of considerable increase afterwards. The hope of having a boarding-house was once a strong inducement, and though now not so strong it still operates. But every increase in the number of masters removes that hope further away from those who are at the bottom of the list. There are 18 under masters, and if four were added, there would be 22 ; and there are but seven boarding-houses.

To this must be added the further fact that boarding-houses are not so profitable as they were. The profits are lessened, partly by the high price of provisions, meat costing not far from twice as much as it did 20 years ago ; partly by the change of habits, which necessitates both better provisions, better accommodation and more servants than were formerly required. I doubt if the profit per boy is much more than half what it was in 1842.

It is, however, useless to argue a matter of this kind on any abstract grounds of fitness, as if a certain income ought to be sufficient. The salaries of assistant masters are regulated by the market, just like everything else that can be expressed in money. The arrangements made here in 1858 lowered the value of the assistant masterships as far as I think it safe to lower them. At that time, I could command the services of the very best men with ease. Now I find this possible, but no longer easy. A step further would make it impossible, and we should get masters of a lower kind. In that case, I do not think we should gain as much as we should lose. The teaching might gain in accuracy, though even that would be doubtful ; but it would lose in life and spirit.

I can see but two ways in which the money for additional masters could be provided : either by adding to the charge for schooling, or by adding to the charge for board. The school fees are now 15½ guineas, and might be raised to 20 ; the board, which is now 50 guineas, might be made to include one or two of the somewhat anomalous extras, such as tea and sugar, and might then be raised to 60. This would really add about 5 guineas to the present boarding fees. The former is the more equitable course, because the pressing need is really for better schooling, not for better boarding. The money obtained in either of these ways would enable us to procure masters enough to work our system thoroughly well.

To add more masters would, however, be of little use, unless we had more school-rooms. We are now much pinched for want of room. Every room that we can use is used, including two that are decidedly too small for the purpose. In addition to these, the head master's hayloft has been converted into a school-room, and we rent another in the Town Hall. Even this is not enough to give each of our present staff of masters a separate room for his form.

It is true that the great school-room is large enough, if mere space be considered, to take in several forms. But it is not possible to teach more than one form well in one room. There is, of course, a great deal to be said in favour of knowledge acquired in spite of difficulties ; and a boy who learns in spite of the distraction and noise caused by two or three other forms being taught within hearing, will very likely have gained something more than mere knowledge. But in such circumstances a great many will not learn at all. And assuredly to the great mass of boys learning is quite sufficiently difficult, even if every removable hindrance be removed.

We ought to have on our own premises, and under our own control, not fewer than three new school-rooms, even to meet the wants of our present staff, and if we have more masters, we ought to have so many more school-rooms. This improvement is so much needed that I should not hesitate to recommend the borrowing of money for the purpose, if it cannot otherwise be made.

These are the improvements that I should wish to see. I do not, of course, mean that if these are made, nothing more will remain to be done. But what remains would be within the reach of the masters themselves. And though we can by no means claim to be beyond all need of advice in this respect, and hope to gain much by what we shall learn through this Commission of other public schools, we are not deficient, I really believe, either in energy or desire to mend. We repeatedly discuss the working of the school among ourselves ; make changes as they seem to be needed ; and are ready to make more to the best of our ability.

44. I cannot suggest any change in our system of education. By degrees the present system may be much improved. But I understand the Commissioners to ask whether I wish to suggest, not such alterations as we can make for ourselves, and I trust are endeavouring to make, but such as would require superior authority to introduce : the total or partial surrender, for instance, of the classics as the staple of instruction. Such alterations I cannot advise.

The studies of boys at school fall under three heads,—literature, mathematics, and physical science. For every branch of each of these studies very strong arguments may be adduced. A boy ought not to be ignorant of this earth on which God has placed him, and ought therefore to be well acquainted with geography. He ought not to walk in the fields in total ignorance of what is growing under his very eyes, and he ought therefore to learn botany. There is hardly an occupation in which he can be employed where he will not find chemistry of service to him. Mathematics rule all other sciences, and contain in themselves the one perfect example of strict logic. It is absurd that an English youth should be ignorant of the history of England : equally absurd that he should not be well acquainted with its noble literature. So each study in its turn can give reasons why it should be cultivated to the utmost. But all these arguments are met by an unanswerable fact—that our time is limited. It is not possible to teach boys everything. If it is attempted the result is generally a superficial knowledge of exceedingly little value, and liable to the great moral objection that it encourages conceit and discourages hard work. A boy who knows the general principles of a study without knowing its details, easily gets the credit of knowing much, while the test of putting his knowledge to use will quickly prove that he knows very little. Meanwhile he acquires a distaste for the drudgery of details, without which drudgery nothing worth doing ever yet was done.

It is therefore necessary to make a choice among these studies, to take one as the chief and to subordinate all others to that. It is an accident, but I think a most fortunate accident, that in England the study thus chosen to take the lead in our highest education has been that of the classics.

I should not be prepared to maintain that the only possible system of education for all ranks in this country is one based on the classics. But I assume that the schools commonly called public schools are to aim at the highest kind of education ; and to give that education, I think the classics decidedly the best instrument. When we have to choose between literature, mathematics, and physical science, the plea advanced on behalf of the two latter is *utility*. They supply a man with tools for future work. Man's chief business, it is said, is to subdue nature to his purposes, and these two studies show him how. Those who use this plea seem to forget that the world in which we live consists quite as much of the men and women on its surface, as of the earth and its constituent materials. If any man were to analyze his own life he would find that he had far more to do with his fellow men than with anything else. And if therefore we are to choose a study which shall pre-eminently fit a man for life, it will be that which shall best enable him to enter into the thoughts, the feelings, the motives of his fellows.

The real defect of mathematics and physical science as instruments of education is that they have not any tendency to humanize. Such studies do not make a man more human, but simply more intelligent. Physical science, besides giving knowledge, cultivates to some degree the love of order and beauty. Mathematics give a very admirable discipline in precision of thought. But neither of them can touch the strictly human part of our nature. The fact is that all education really comes from intercourse with other minds. The desire to supply bodily needs and to get bodily comforts would

ANSWERS.
RUGBY.
Rev. F. Temple.

prompt even a solitary human being (if he lived long enough) to acquire some rude knowledge of nature. But this would not make him more of a man. That which supplies the perpetual spur to the whole human race to continue incessantly adding to our stores of knowledge, that which refines and elevates and does not educate merely the moral nor merely the intellectual faculties, but the whole man, is our communion with each other; and the highest study is that which most promotes this communion, by enlarging its sphere, by correcting and purifying its influences, by giving perfect and pure models of what ordinary experience can for the most part only show in adulterated and imperfect forms.

The same thing is said in another way when we assert that that study is the chief instrument of education which makes a man in the fullest sense a Christian gentleman. Taking this word in its highest and best meaning, it certainly represents the aim of the highest education. Now of course it is quite certain that more than half of all education in any given instance comes not from the studies but from the teacher. If teachers at school and parents at home are gentlemen, they will do more to make the boys the same than any study can do. But this may perhaps remain the same whatever study we make the chief; meanwhile, so far as the study selected can influence the result (and it would be absurd to deny that its influence must be great), that study will do so most, which most familiarizes a boy's mind with noble thoughts, with beautiful images, with the deeds and the words which great men have done and said, and all others have admired and loved.

So again all studies up to a certain point help each other. I have no doubt at all that a boy of eight who has been well instructed in arithmetic will find it easier to learn Latin than one who has not. And so physical science will prepare the way in some degree for mathematics. Every study has a considerable power of helping every other study. But among all the possible studies this power appears to me pre-eminently to belong to those which I have classed under the general name of literature. I believe the kind of education given in a public school is pre-eminently that which fits a youth to take up any study whatever. When I had to deal with a very different class of minds, the students of Kneller Hall, I found that studies of the sort included under the name of literature did more to fit them for all other studies than anything else that I could teach them. My experience here is still the same. I once asked a tradesman who had been himself at Rugby school, and was intending to send his son, whether he had learnt anything here that was of use to him afterwards. He answered, "I was at school several "years, and I have never regretted it; I learnt there what I "don't think I could have learnt as well anywhere else, how "to learn anything I wanted." The Principal of Wellington College, who has peculiar facilities for deciding this question, has come, I believe, to the same conclusion. The studies pursued at a public school and the method of study do not always give a boy the precise thing that he wants for immediate use in life; but they give a training which enables him to study almost anything afterwards with ease. I must repeat what I said above, that I am not now considering whether other systems of education may not be needed in this country; but whether it would be wise to change the system in use at our public schools.

If the staple of education is to be found in the different branches of literature, the classics in a perfect system must be the substratum.

In the first place, modern literature is not fully intelligible, except to those who have studied the classics. A student of mathematics does not find it any help to him to study the early writers on the science. No one is aided in learning the differential calculus, by going back to fluxions. Nor will the study of physical science gain much by beginning with the writings of earlier discoverers. But literature can only be studied thoroughly by going to its source. Modern theo ogy, modern philosophy, modern law, modern history, modern poetry, are never quite understood, unless we begin with their ancient counterparts.

In the next place, the perfect and peculiar beauty of the classical literature will always put it at the head of all other.

Thirdly, the classic life contains, as Mr. J. S. Mill has remarked, "precisely the true corrective for the chief defects of modern life. The classic writers exhibit precisely that order of virtues in which we are apt to be deficient. They altogether show human nature on a grander scale, with less benevolence, but more patriotism; less sentiment, but more self-control; if a lower average of virtue, more striking individual examples of it; fewer small goodnesses, but more greatness and appreciation of greatness; more which tends to exalt the imagination, and inspire high conceptions of the capabilities of human nature. If, as every one must see, the want of affinity of these studies to the modern mind is gradually lowering them in popular estimation, this is but a confirmation of the need of them, and renders it more incumbent on those who have the power, to do their utmost to aid in preventing their decline."

Lastly, and this is a practical consideration of the greatest weight, the classical system of education has been in possession of our great schools for two centuries; and in consequence, the best method of using classical learning for purposes of education is so far understood, that it is comparatively easy to find thoroughly efficient masters. How far from easy it is to find thoroughly efficient masters of modern languages every one knows. Men who can teach French or German can be found; but it is exceedingly difficult to find any man, who can so teach French and German, as at the same time to form the minds and characters of the learners.

One obvious reply may be made to all this; that many boys need something more than the cultivation of their faculties. The necessities of their life require them to be furnished over and above with knowledge which can be immediately applied to the business of life. Even if they have learnt how to learn, others, who have already got the peculiar learning required, will have a start of them, which, in this age of competition, can never be made up.

This is to some extent true, and I think it clear that in this country there is room for other systems of education besides the classical.

I should be glad to see great schools established in which Greek was left optional, or nearly so; and Latin, French, and German made the staple of instruction, while a little more time was allowed to mathematics and physical science. The education would not be so good, but would be more ready for use; and though not equal to the classical, need not fall far short of it. Such a school, or very nearly such a school, is Wellington College; and the modern departments of Cheltenham and Marlborough Colleges approach the same idea. But I think it would be most unwise because such schools are needed to attempt to convert the public schools to the purpose, nor should I consider it wise to follow the Cheltenham and Marlborough example, by attaching to the public schools modern departments. The classical work would lose, the other work would not gain.

I have said enough to answer the question. I could describe more fully what I meant by such schools as in my judgment would supply the need now plainly felt for a good education not quite so classical as that which we give here. But as I should not propose to make Rugby into such a school, it does not seem to fall within my province now.

(Signed) F. TEMPLE.

ANSWERS of the Rev. CHARLES EVANS, M.A., Assistant Master.

III.

43. The moral results of a Rugby education appear to me to be most satisfactory. The school does certainly succeed in sending into the world a large number of Christian-minded, conscientious, hard-working men, and any one who looks carefully into the facts will be surprised to find how few old Rugbeians belie the fair promise of their youth, much less turn out badly in after-life. These good results are due, in a large degree, to the influence and position in life of the parents of our pupils, members for the most part of the working upper middle class: at the same time it is, I think, impossible to be long connected with this place without being much indebted to the religious, earnest, working spirit which pervades it.

Intellectually, I should say that our system is at once a success and a failure.

J. M. Wilson, Esq.

In the case of our picked scholars, or even of the majority of those who reach the two highest forms, the results might, I think, be pronounced perfectly satisfactory. Such boys generally enter upon the world with their minds as well disciplined and furnished as they possibly can be, apart from special professional instruction.

It must be remembered, however, that a large number of boys leave Rugby every year from lower forms, and to most of them, I think that our system does but scant justice. I am not speaking of the idle or the dull, but of a very large class of boys of good natural abilities and industry, who yet do not reach high positions in the school. At about 16 years of age, this type of mind appears to reach the length of its classical tether, and however much worked after that time it takes no polish. Such boys are constantly passed in the race for promotions by younger and more apt competitors, and leave school at 17 or 18 years of age, very imperfectly educated, with little Latin and less Greek, with stagnant and ill-informed minds, if not a great distelish for study and application of all kinds. They have never reached the point at which the study of classics begins to acquire its greatest value as an engine of mental discipline, and apart from the moral and social advantages, and the unconscious self-education of a large school, their last two or three years at Rugby are, I think, almost unprofitable. It is quite true that in many instances such boys grow into eminent men, and we are tempted to confound *post hoc* with *propter hoc*; forgetting how much may be due to natural force of character and abilities, developed in spite of, rather than in consequence of their early intellectual training.

To boys of this class I am strongly of opinion that some modification of our present system would be most valuable. Up to the age of 15, upon the average, the staple of instruction ought, I think, to be grammar, taught through the study of the dead languages. Having acquired a solid ground-work in Latin and Greek, they might then be permitted to drop a certain portion of their classical work (say versification and Greek), and devote the time thus gained to *mathematics* principally, to physical science, history, and modern language, care being of course taken to guard against superficial smattering. It does so happen that some such training as this would better meet the immediate wants of several professions and departments in practical life, but I advocate it not on this narrow ground, but in the abstract as a valuable liberal education.

44. How far, however, it is desirable to alter the established system of this school to meet such views is another question. The establishment of a distinct department, such as this plan would involve, would be attended with many difficulties. The established ascendancy of classics tends to kill any new study, and would, in all probability, force a mathematical department at the outset into a subordinate position; it would then become a mere refuge for the destitute, into which would be drafted the idle and dull boys of the school. Few boys of mark would enter it if it involved any loss of position, and the maintenance of perfect equality in the face of the prestige of classics would always be a hard matter. Even if this were secured, the unity of the school, the strong bond of common tastes and interests and feelings, so valuable an element in our present system, would be endangered, to say nothing of the increased difficulty of finding head masters, equal at once to the teaching and general supervision of such a double school.

For these reasons such departments may be more easily worked at the new institutions which are springing up in different parts of the country, With them there are no traditions to contend against: the new department starts on terms of perfect equality with the classical side, and very often attracts the élite of the school.

Still, even at Rugby, I do not consider the difficulties insurmountable, and think the experiment well worth a trial.

Into the details of the plan which I have merely shadowed out it may be unnecessary to enter.

(Signed) CHARLES EVANS, M.A.,
Late Fellow of Trinity College, Cambridge,
and Assistant Master to Rugby School.

ANSWER of J. M. WILSON, Esq., B.A., Assistant Master (*Mathematics and Natural Philosophy*).

21. The school possesses a fair geological museum, consisting of a very good collection of the igneous rocks (British), of copper and iron ores from all parts of the world, and some other minerals; of fossils from all the principal strata, and a tolerably complete collection of fossils from the lower Lias on which Rugby is situated. These last have been largely contributed by boys, and are arranged under glass in the Arnold library. Boys make use of this museum for naming specimens collected by themselves on application to the master of natural philosophy.

There are also several geological maps and charts.

There is also a fairly good collection of Lepidoptera and Coleoptera, given to the Arnold library by an old Rugbeian, and a good collection of Warwickshire butterflies and moths in the natural philosophy school.

There are also elementary collections of land shells (very incomplete), and of foreign sea shells.

There is a laboratory for practical analysis, fitted with all that is requisite for qualitative and quantitative inorganic analysis. It is fitted for five students only, but seven can work in it at once without much inconvenience. There is also apparatus for lectures in chemistry, diagrams illustrative of the principal chemical works, and a growing museum of chemical products. In other branches of natural philosophy the apparatus is less complete. There is sufficient, however, for elementary lectures on mechanics, pneumatics, hydrostatics, and heat; and a good collection of apparatus in frictional and voltaic electricity, and some valuable apparatus in electro-dynamics (*e.g.* Ampere's apparatus, Ruhmkorff's coil, &c.)

There is a library of books of reference on subjects of natural philosophy (*e.g.* Gmelin, Rose, Otto Graham, &c.), and of popular and choice works on all kinds of natural history and philosophy. Boys can borrow these at all times on application to the natural philosophy master. (The value of the apparatus besides that for chemistry may be between 200*l.* and 300*l.*)

f. Foundationers.

Questions, &c.

I.

1. State generally the various kinds of property held by or in trust for the School, and the various kinds of revenue which it possesses, mentioning any special trusts to which such property and revenues or either of them are subject.

2. Be so good as to specify in detail the several properties and sources of revenue possessed by or held in trust for the School. For the sake of clearness it is recommended that the statement should be in a form corresponding as nearly as may be with the accompanying specimen (A).

3. State the system adopted for the management and receipt of the rents or other produce of the property and endowments of the School, and for the audit or examination of the accounts.

4. Have any material changes been made in the system of letting and management since the foundation of the School, and, in particular, within the last 50 years? Are any portions of the property now let at rackrent upon which fines or any payments of that nature were formerly taken, or *vice versâ*?

5. If it is or has been the practice to take fines, or any payment of that nature, on renewal of leases of property belonging to the School, can you state when this practice was introduced, and on what principle fines are set?

6. Can you furnish any information showing the alterations in value of the property or any part of the property of the School since its foundation, and particularly within the last 50 years, and the rates of any increase or decrease that may have taken place?

7. Be so good as to furnish the following statements:—

(1.) A statement showing the total amount received by or on account of the School for the year 1860, including rents, fines, heriots, the produce of timber, and all other receipts of every kind, and also a detailed statement or account of the application of the money so received, pointing out any particulars in which such latter statement would not fairly represent your ordinary practice, and likewise pointing out how far and in what respects you consider such application to be directed or authorized by your statutes or regulations, by usage, or on other grounds.

(2.) A statement showing the average receipts under different heads during the last seven years.

8. Do the statutes or regulations contain any directions respecting the application of surplus revenue? Have those directions always been followed, and are they considered to be now in force? If not, will you state the grounds upon which they are or have at any time been departed from?

9. Please to furnish a statement of the ecclesiastical benefices in the gift of or otherwise attached to the foundation, with the actual value of each, specifying which of them are now held by persons who are or have been Fellows of the foundation, or connected with the School as masters or assistant masters or otherwise. Is there any rule, usage, or practice regulating the exercise of the ecclesiastical patronage belonging or attached to the foundation?

II.

1. When and by whom was the School founded? What is the nature of the foundation, and how is it constituted? and in what relation does it stand to any corporate body, ecclesiastical or civil, with which it is connected?

2. Be so good as to state the original and the present constitution of the foundation; the powers, duties, privileges, and emoluments (by statute or usage) of its head; the number, privileges, emoluments, and duties of the Fellows, or other members of it (not being scholars); the statutory qualifications for and the mode of election or appointment to the headship or to a fellowship or other place on the foundation (not being a scholar's place), and any statutory restrictions to which the head or any of the other members are subject. Has the original number of members been increased or diminished; and if so, by what authority? and does any power now exist of increasing or diminishing the number? Do you conceive that any such increase or diminution would now be beneficial to the foundation?

3. In what person or body of persons is the government of the School vested, and what are the powers considered to belong to such person or persons?

4. Is the School governed by statutes? If not, are there any rules or regulations by which it is governed?

5. Have the original statutes or regulations made for the government of the School been altered; and if so, when and by what authority? Have they in any, and what respects ceased to be observed? If so, will you state any reasons by which you consider the non-observance of them to be justified?

6. Will you furnish the Commissioners with a copy of the original statutes or regulations, of any others which may have been subsequently made, and of any ordinances and dispensations which may have been made or granted by authority in relation to the School? And can you state where the originals now are, or give the Commissioners any information on the subject?

7. Is there any power of altering or amending the statutes or regulations, or of granting dispensations from the observance of them, and if so, in whom does it reside?

8. Has the School any visitor or visitors? If so, is the visitor's authority defined by the statutes, or does it depend solely on the general law affecting visitors and visitorial powers? Is it subject to any special limitations? Are there periodical visitations? If not, will you mention any cases in which the visitor's authority has been exercised during the last 50 years? Has it ever been exercised to relieve from the observance of statutes, or to make new statutes?

9. Are there any charters or instruments of foundation or endowment relating to the School? If so, can you furnish the Commissioners with copies of them, or of any of them, and can you state where the originals now are, or can you give the Commissioners any information on this subject?

10. What were originally, and what are now, the nature and amount of the emoluments of the head master, and other masters and assistant masters? State particularly the sources of these emoluments, and the average amount derived from each source. If stipends are paid to them, or any of them, out of the revenues of the foundation, what proportion did those stipends originally bear, and what proportion do they now bear, to the emoluments of the Fellows or other members of the foundation? Is the income of the head master chargeable with any outgoings not bringing back any direct personal emolument to him, such as partial or entire payments of the salaries of assistant masters or other persons on the School establishment, or any similar expenses? If so, state the amount of such outgoings.

11. What was the original number of masters, and what is now the number of masters, and assistant masters? Can you state at what times the increase has taken place, and what additions, if any, have been made to the number, and when, during the last 50 years? Is there any authoritative rule or any custom regularly observed as to any proportion between the number of masters and the number of boys? If so, when was the rule introduced, and with whom does it rest to see that it is adhered to?

12. What are the specific duties and powers, and what is the authority in the School, of the head master and of each of the masters and assistant masters (including all persons engaged in any way in the work of teaching)? How and by whom are they appointed? Are they, or any of them, customarily, or by rule, taken from any particular profession, place of education, class, or body of persons, and are there any conditions of eligibility established by rule or custom? Is there any power of removing them, and, if so, how and by whom is it exercised? Is there any rule or usage respecting superannuation, or any provision for it?

13. What are the privileges or advantages given by the original statutes or regulations to scholars on the foundation? and what, according to the statutes or usage of the School, constitutes a foundation scholar? What privileges or advantages do such scholars now actually enjoy? If there is any difference between their original and their actual condition as to such privileges or advantages, can you explain how and when it arose? Are there any advantages common to the other boys from which they are excluded? Do you consider the position of a foundation scholar to be as advantageous (either positively or relatively to that of a Fellow, or to that of boys not on the foundation) as it was originally, or to be more or less so, and to what causes do you attribute the change? Can you represent the amount of it in money? Is any money paid by a foundation scholar on account of board, lodging, instruction, or general school charges, over and above what is provided for him out of the foundation? If so, state the average amount and the nature of the charges.

14. Is the number of foundation scholars fixed by the statutes or regulations? Do they provide for or authorize, or do they expressly or implicitly prohibit, an increase or diminution of the number? Mention any portions of them which in your opinion bear upon this subject. Can you state whether the actual has ever fallen below the statutory number, and when, to what extent, from what length of time, and from what causes?

15. What are the qualifications for election or admission as a foundation scholar, and how and by whom are such scholars elected or admitted? Have there been any and what changes in these respects within the last 50 years?

16. Besides foundation scholars (or if Shrewsbury has no such scholars), do the statutes or regulations give special advantages to any particular class of boys having a local or other qualification? If so, are the statutes or regulations observed in this respect, or when and how did they cease to be so?

17. Is the admission of boys not being foundation scholars, and having no local or other special qualifications, provided for or contemplated in the statutes or regulations? Is there any limit to the number of boys who may be so admitted, and to what extent are they entitled to share in the advantages of the School? Are they entitled to be taught gratuitously or at fixed charges? Are the statutes or regulations observed in this respect, or when and how did they cease to be so observed?

18. Be so good as to state particularly the ordinary charges and expenses of a boy at Shrewsbury (that is to say, all such charges and expenses as are usually included in the bills sent to parents), their average amount, and the limits within which they usually range, distinguishing those which are variable from those which are uniform, and such as are only usual from such as are obligatory. Are these charges and expenses bounded by any definite limit or subject to any supervision or control? What charges are made, under what heads, and in what manner, for instruction or tuition in or out of School, to whom are such charges respectively paid, and are any, and which of them, considered as "extras"? Does your statement of charges and expenses apply equally to all the boys, and, if not, what are the differences or exemptions, nominal or real?

19. Please to state the total amount of the sums received from boys or their parents or guardians during the year 1860, for instruction or tuition.

20. Are there any boys participating in the general instruction of the School who lodge and board either with their parents or in other houses not recognized as boarding houses by the authorities of the School? If so, what are the payments obligatory in such cases for each boy, and are such boys, as regards instruction and the use of playgrounds, and in all other respects, on an equal footing with the other boys, or what differences are there?

21. What is the amount of accommodation afforded for boarders, whether in the School itself or in boarding houses? What rules or regulations (if any) are there, and how are they established and enforced, respecting the persons authorized to keep boarding houses, the *maximum* number in each house, and the general management of such houses as regards the health, comfort, and good order of the inmates?

22. Is there one uniform kind of domiciliary accommodation furnished to all the boys of the School? if so, what is its nature? if not, what are the varieties, and do these depend on the boarding house in which the boy boards or on the part of the School to which he belongs, or on the option of the parents and guardians of the boy, or on rank? Is there a varying rate of charge for lodging correspondent in each case with the varying nature of such domiciliary accommodation? To what extent, and subject to what distinctions, do the boys prepare their school work, and generally prosecute their studies in such domiciles, and to what extent elsewhere? if to any extent elsewhere, in what place, and under what conditions as to privacy or otherwise?

23. Is there one uniform scale of diet supplied to all the boys? If so, what is the number, what the hours, and generally what the description of such meals? If not, what are the varieties? and do they depend on age or position in the School, or on the varying practices of different boarding houses, or on the option of parents and guardians, or on the rank of the boys? and is there in all cases a varying rate of charge for board correspondent with the varying quality and number of such meals?

24. Does the rate of charge, for either board or lodging, depend at all upon the social or scholastic status of the person keeping the boarding house? Does it depend at all upon the rank or the scholastic status of the boys lodged and boarded?

25. Is any part of the profits derived from the charges for board and lodging regarded as an indirect payment (total or supplementary) for other services to the School, whether instructional or disciplinary; such as teaching, tuition, moral superintendence, preaching to the boys, or any similar service?

26. Is the resort by the boys to pastry-cooks' shops, inns, or other houses of entertainment a recognized or a customary method of obtaining either meals or any considerable portion of their food?

27. What is the system upon which furniture is provided for the boys' rooms, and what charges are made in respect of it?

28. With whom does the selection of the boarding house in which a boy lodges rest? Is a recommendation commonly given by any school authorities?

29. How many of the classical, mathematical, and other masters and assistant masters keep boarding houses? Is it a privilege which any of them are unable to obtain? How many boarding houses (if any) are kept by persons taking no part in the work of teaching?

30. Have the authorities of the School any, and what, power to limit the number of boarding houses within certain bounds? If so, can boarding houses be kept, and are any kept, without their permission, beyond those bounds?

31. What is the average period for which boys remain at the School? Is there any difference in this respect between boys on the foundation and boys not on the foundation?

32. Please to state,—

1. The total number of boys now at the School.
2. The greatest number in each year during the last 20 years.
3. The number of boys now in each form, class, or division.
4. The number of boys now in each boarding house.

III.

1. What is the earliest age, and what is the latest age, at which a boy may be admitted into the School?

2. Is any preliminary knowledge (proved by examination or otherwise) in spelling, writing, and arithmetic, or in any other subject, required of a boy on admission into the School?

3. Is there any limit to the age at which a boy may be originally placed in any of the lower forms, or beyond which he can *remain* in any of the lower forms?

4. What is the highest form in which a boy can be placed on admission into the School?

5. What is the latest age at which a boy may remain in the School?

6. Be so good as to furnish, with respect to each form, class, or division of the School, tabular statements corresponding respectively with the accompanying forms B., C., and D.; and with respect to the private pupils of each master and assistant master, a tabular statement corresponding with the form E. Add an explanation of the character of the books read or used, when not sufficiently indicated by the title.

7. Has the head master any power to modify the system and course of study, or to change from time to time the books or editions of books used in the School? If not, in whom are such powers vested?

8. Have the assistant masters any voice, consultative or other, in the direction of the studies of the School?

9. On what system, and whether by seniority or proficiency, or both, does a boy rise in the School; and in determining the rate of his rise, what relative weight, as nearly as can be stated, is assigned to proficiency in the under-mentioned subjects respectively:—classical scholarship; modern languages and literature, including English; English composition; history and geography, ancient and modern; arithmetic; mathematics; physical science? In what manner is such proficiency ascertained, and in what manner is such weight assigned? Are the classes or divisions of the mathematical and of the modern language departments of the School coincident with those of the classical; so that Class N. (say) in classics consists of the same boys as Class N. in French, German, or mathematics?

10. What provision is made for the teaching of each of these subjects, and for promoting the study of them? Can you furnish any information showing to what extent they are severally studied, and with what success? Which of them do, and which do not, form a necessary part of the regular course of study?

11. Is any extra fee exacted for instruction in modern languages, mathematics, or physical science, and if so, what is the amount of such extra fee or fees? Do you consider that the progress of the boys in these studies is in proportion to their progress in Greek and Latin; and if not, to what do you attribute the comparative deficiency?

12. What periodical examinations are held at the School, and in what subjects? By whom are they conducted, and do they extend to the whole School, or to some and what part of it?

13. What scholarships, exhibitions, prizes, or other rewards are established in the School, or in connexion with it, and by whom and on what principles are they severally awarded, and to proficiency in what subjects? State clearly how far the examinations for any such rewards turn upon the regular work of the boys, whether in School or with their tutors; and, in the case of such examinations ranging beyond the limits of such work, point out what the extent of such range is, and how far and in what way boys aiming at those rewards are enabled and assisted to apply to that pursuit, whether in the way of reading or composition, any of the time which they have at their disposal beyond what is required for their school work.

14. Is it compulsory, formally or practically, on every boy to have, in addition to the master attached to his form or class, a tutor or tutors (whether called a private tutor or not), or is it usual, without being compulsory, or permitted (in any and in what cases) without being usual? Are boys (if any) without such tutor at a clear disadvantage, as compared with others, in respect of their studies? What are the tutor's duties? Describe fully the system of instruction or tuition, so far as regards the relation in which each boy stands to the masters and tutors with whom he has to do; state how long it has existed, and what you conceive to be its advantages and disadvantages.

15. Is it the custom in any and in what forms for the boys to construe their lessons to a tutor, either public or private, before they construe them in School to the master? If so, how much time, in proportion to the regular lesson in School, is usually spent in such previous construing?

16. Is the number of boys under the charge or teaching of each master or tutor limited, and if so, how and what is the limit? What is the average number of boys under each master or tutor?

17. Is it the custom for the parent or guardian of a boy sent to the School to select, or for the head master to nominate or recommend, his tutor?

18. Is it practicable, and usual, to any and what extent, to pay attention to individual character, capacity, and mental bias, and to give boys particular facilities for or encouragement in the pursuit of studies for which they may show a special aptitude? Are particular facilities given for the pursuit of studies of a professional character for which special examinations have to be passed, and in which, therefore, special preparation must sooner or later be gone through? If so, please to point out distinctly to what extent, and in what manner, such facilities, if granted in particular cases, are adapted and subordinated to the general principles of the education of the School.

19. Do you conceive that the instruction given by the master in the course of the ordinary work would be sufficient, without supplementary aid, to prepare a boy of good ability for a successful career at the Universities, or for success in the competitive examinations established in connexion with the civil, military, or East India services? If not, would it in your opinion be possible so to improve the ordinary teaching as to make it sufficient for these purposes?

20. Can you furnish the Commissioners with any information showing what scholarships at the Universities, or other distinctions (there or elsewhere), open to general competition, have in each of the last ten years, or during any longer period, been gained by foundation scholars and by boys not on the foundation respectively?

21. Has the School any library to which the boys have access? and if so, under what conditions are they permitted to use it? Has the School any collection of natural history, or any apparatus for experiments in natural philosophy?

22. Is provision made for systematic instruction, elementary or advanced, in music or drawing, or both; if so, what time is allotted for the prosecution of such studies, what is the general course of such instruction in each, up to the highest point at which it is cultivated; what was the number of boys during the last six months of 1860 availing themselves of such provision, and how long had each then been cultivating it at School; are these studies successfully prosecuted?

23. State what means are adopted to promote the religious and moral training of the boys, and to enforce order and good conduct, by the presence and personal influence of masters or tutors, by the help of monitors or prefects, or the co-operation in any other way of the boys themselves, by rewards and punishments, or otherwise.

24. State accurately what, if any, regulations are in force by law or usage on the following points relating to the religious teaching or training of the boys:—

(1.) The system of preaching in the college, chapel, or church attended by the boys. Are the sermons specially addressed to the boys? To whom is the duty of preaching intrusted or confined.

(2.) The confirmation of the boys.

(3.) Their attendance at the church services, and especially at the Holy Communion.

(4.) The observance of Sunday.

(5.) Their religious instruction at the hands of their tutors and in public work in School? State particularly how their religious knowledge is tested and ascertained by their tutors or in any of the public examinations.

25. Are the same offences uniformly visited with the same punishment? If so, give some account of the system, specifying the punishments, and the offences to which they are awarded respectively.

26. Do all offences come before the head master? If not, do any? In the latter case, state what they are, and state in either case, through what channel they are brought before him. Does he inquire into the nature and gravity of the offences which come before him, and does he require evidence of their having been committed? Does he in all cases award, and in any cases inflict, the punishment? Are these duties, or either of them, performed, in any and what cases, by other masters or assistant masters?

27. What powers and duties in maintaining the discipline of the School are assigned to any of the boys themselves? What portion of the School has such powers and duties? and over what portion of the School are they exercised?

28. Do you consider such powers essential or useful to the effective maintenance of school discipline? State the grounds of your opinion. Do they on the whole tend to produce, or to suppress, tyranny of the stronger boys over weaker, and how?

29. What powers and privileges are given to any portion of the School over any other portion of it, either to enforce attendance at games, or to exact personal services of any description? What portion of the School has such powers? Over what portion are they exercised? Are such powers and privileges *generally* in any way detrimental either to health, to the reasonable enjoyment of liberty, or to the opportunities of bodily or mental recreation or study on the part of the lesser boys? Please to assign the reasons for your opinion.

30. Have you known instances of the abuse of the before-mentioned disciplinary powers and privileges? And

do you consider that such instances, where they exist, are likely to come to the knowledge of the masters?

31. During how many weeks in the year are the boys at School?

32. How often, and when, and for how many weeks each time, do the boys go home for the holidays?

33. While the boys are at School, what are the usual holidays or half-holidays during the week?

34. At what hours in winter and summer respectively are the boys required to be dressed in the morning, and to go to bed at night?

35. On regular School days, what is the time allowed for play?

36. What is the acreage of the ground allotted to the boys for their out-door amusements and games?

37. What is the nature of such ground, viz., whether (1) covered or entirely open; (2) paved or field; (3) grass or bare?

38. What is the nature of the ground immediately surrounding such playground, and especially is it occupied by inhabited buildings, or by factories, or is it open?

39. What are the common games or other bodily exercises of the boys?

40. What range is practically (whether by express permission or by customary connivance) allowed to boys over the ground lying beyond the precincts of the School and playground, and to what extent, and for what purposes, do the boys commonly avail themselves of it?

41. What athletic exercises are taught as part of the education, and of these which are extra and which compulsory, either absolutely or with reference to some particular purpose (as swimming in order to have liberty to go in boats)? Are any special teachers appointed to superintend such exercises?

42. Is it, or is it not, the general habit of boys most distinguished for their progress in intellectual studies to distinguish themselves also, or to partake with interest, in the manly games of the School, or is any difference in the tendencies of different intellectual studies in this respect discernible?

43. So far as you can judge of the results in after-life of the education afforded at Shrewsbury, do you consider those results satisfactory? Or is it your opinion that the system in any respects falls short of what a great public School might accomplish in preparing boys for the various lines of life, professions, and employments in which they may engage? If so, will you state what the deficiencies are; whence in your judgment they arise; and how far you think them remediable?

44. Does any alteration in the system and course of education at Shrewsbury appear to you desirable? Will you be good enough to lay before the Commissioners any suggestions on this head which you may think expedient?

SHREWSBURY.

ANSWERS of the GOVERNORS and TRUSTEES of the Free Grammar School of King Edward VI. at Shrewsbury.

I.

1. The property held by or in trust for the school consists of the school buildings, masters' houses, and tithes, a freehold house at Grinshill, two chief rents, and money invested in the public funds.

The property and revenues are subject to the payments to the ministers of the parishes of St. Mary and Chirbury, and to the curacies of Clive and Astley, also to scholarships or fellowships and exhibitions to the Universities of Cambridge and Oxford.

2. See annexed statement A.

3. The tithe and other rents are received by the treasurer. Any change in the rent of the house and garden is submitted to the governors for consideration. The accounts are annually audited and examined by the trustees.

4. Previously to the commutation of the tithes they were valued and let, but since the commutation the tithe rentcharges are received from the occupiers.

No portion of the property is let at rackrent upon which fines or any payment of that nature were ever taken.

5. It has not been the practice to take fines or any payment of that nature.

6. The annual value of the property in the year 1572 (15 Eliz.) appears to have been 93*l.* 8*s.* 3*d.*

The annual value at the time of the passing of the School Act in 1798 (when the trust was vested in the present trustees) was 949*l.* 5*s.* 5*d.*

The value 50 years ago, viz., in 1811, was 1,918*l.* 8*s.* 11*d.*

The value for the past year was 3,114*l.* 0*s.* 8*d.* This is exclusive of 270*l.* dividends on funded property.

The increase has arisen from the successful close of questions as to tithe, which were in litigation, and from increased amounts obtained on the commutation, and from the tithe rentcharges being now received from the occupiers, instead of the tithes being let by auction or under leases.

7. The account marked A(1) hereto annexed, furnishes the statement requested. The application is directed and authorized by the statute relating to the school, and the scheme sanctioned by the Court of Chancery in 1853.

STATEMENT showing the average Receipts under different heads during the last Seven Years.

Year.	Amount of Tithe Rentcharges.	Other Rents.	Chief Rents.	Dividends.	Total.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1854	2,544 8 0	30 14 1	0 18 3	270 0 0	2,846 0 4

	2,714 4 1	30 10 3½	0 18 3	270 0 0	3,015 12 8

8. The scheme,* of which a copy is forwarded herewith, contains directions with reference to the application of the surplus revenue, which are now in force and have not been departed from.

Previously to the allowance of this scheme the application of the surplus revenue was regulated by the 24th section of the 38 Geo. 3. c. 68, being the Act for the government and regulation of the school, which regulations were adhered to.

9. The following is a statement of the ecclesiastical benefices attached to the foundation: —

The incumbency of the parish of St. Mary, Shrewsbury.
The chapelry of Astley.
The chapelry of Clive.
The vicarage of Chirbury.

None of these benefices are now held by any person who is or has been connected with the school as master or assistant master.

The patronage is vested in trustees appointed by the Lord Chancellor under the Municipal Corporation Act, and is regulated by the 28th section of the School Act, 38 Geo. 3., on which a construction has been placed by Vice-Chancellor Wood, in the case of "The Queen *v.* the Earl of Powys and others."

Statement A. referred to in Answer to Question 2.

J. J. PEELE, Bailiff.

II.

1. The school was founded by Letters Patent of King Edward the Sixth..

Additional revenues were granted by Queen Elizabeth by indenture dated 22nd May, 13th year of her reign.

Its only connexion with any corporate bodies ecclesiastical or civil, is as follows:—

As to the Corporation of Shrewsbury.

The mayor, for the time being, is one of the trustees, and *ex officio* chairman.

The sons of burgesses of the borough of Shrewsbury are entitled to free education, and to preferences with respect to the ecclesiastical preferments and right to exhibitions.

As to St. John's College, Cambridge.

The election of head and second master is vested in the masters and fellows. The ancient exhibitions founded before the passing of 38 Geo. 3. are attached to this college.

There are other exhibitions attached to this foundation which are under the management of other trustees, and the particulars of which can be best furnished by those trustees.

2. The original and the present constitution and foundation are set forth in the Letters Patent of Edward the Sixth, and in the Statute of 38 Geo. 3. The Letters Patent recite that "at the humble petition as well of the bailiffs and "burgesses and inhabitants of the town of Shrewsbury in "the County of Salop, as of very many other our subjects "of our whole neighbouring country there for a grammar "school to be erected and established there for the educa-"tion and instruction of boys and youths," the King did grant and ordain that thereafter there should be one grammar school in the said town of Shrewsbury, which should be called the Free Grammar School of King Edward the Sixth, for the educating, teaching, and instructing of boys and youths in grammar, to continue at all times thereafter for ever.

The head master, by the 16th section of the 38 Geo. 3. is to have the management of the school.

As to his emoluments, an annual stipend of 465*l.* is paid to him out of the funds of the school, with the privilege of taking boarders, and from the admission fee of 2 guineas each, and the yearly sum of 15 guineas authorized by the scheme, he defrays the expenses attendant upon the school and of such masters as are not provided by the foundation.

The masters paid by the trustees are:—

	£
The Rev. Dr. Kennedy (head master)	425
ditto as catechist and reader	40
The Rev. John Rigg (second master)	200
The Rev. Henry Greenwood (third master)	100
Mr. T. A. Bentley (French master)	50
Mr. T. N. Henshaw as accidence master	25
ditto for teaching writing and arithmetic to burgess' sons	30

The appointment of masters is regulated by the 11th, 12th and 13th sections of the statute.

There are no other statutory restrictions than those contained in the Act.

3. The powers and duties of the governors and trustees are regulated by several sections of the statute (*see* copy Act).

4 and 5. The school is governed by the before mentioned statute and a scheme sanctioned by the Court of Chancery.

For the last 3 years an alteration has been made by the head master; such boys as are not intended for either university not being required now, as heretofore, to learn Greek or the art of classical composition.

6. Copies of the statutes or any other documents in the possession of the governors can be furnished to the Commissioners; the originals are in the possession of the school bailiff.

7. By the 23rd section of the statute the governors have the power to make byelaws, but none have been made.

8. There is no actual visitor, but the Bishop of Lichfield has authority with reference to the sanctioning of byelaws and the alteration of salaries, by the act and scheme.

9. *See* answer 6.

10. The amount of the emoluments of the different masters can alone be furnished by them. The stipends paid out of the foundation are stated in the accounts.

11. The number of masters paid out of the foundation is now the same as at the time of the passing of the statute of 38 Geo. 3rd, with the addition of an annual payment through the head master to a mathematical teacher, a French master, and an allowance to an accidence master for teaching writing and arithmetic to the sons of burgesses.

The governors have no record of the number of assistant masters employed and paid by the head master.

There is no such authoritative rule or custom as mentioned in this inquiry.

12. *See* 11th, 12th, 13th, 14th, 15th, and 16th clauses of the statute as to the duties and powers of the masters, also the scheme of 1853.

As to power of removal, *see* clause 17.

As to superannuation, *see* clause 15.

13. The privileges and advantages, as defined by the 14th section of the act, are, that the master shall teach and instruct in the school such boys as are the legitimate sons of burgesses of the town of Shrewsbury gratis and without any fee or reward whatsoever, and by the 25th section, the burgesses' sons have rights of preference in the election of exhibitioners, and by the 28th section, when born in Shrewsbury, in the presentation to the ecclesiastical benefices.

In addition to these privileges and advantages they enjoy the advantages common to the other boys and are not excluded from any.

A burgess's son pays the head master in respect of his board and lodging when a boarder, but nothing with respect to education.

The amount can only be furnished by the head master.

14. No limitation of number.

15. The sons of burgesses; no change in this respect during the last 50 years.

16. By clauses 25 and 28 boys other than burgesses' sons have certain preference with reference to exhibitions and benefices but have no special advantages as to education.

17. The admission of boys not being foundation scholars

ANSWERS. SHREWSBURY. *The Governors and Trustees.*

and having no local or other special advantages was, it is conceived, contemplated by the original foundation, and contemplated by the statute.

There is no limit to the number of such boys.

They have all the advantages of the school except gratuitous education; and the preferential rights of burgesses' sons in the election of exhibitioners.

These questions will no doubt be answered by the head master.

21. The accommodation for boarders, as far as the foundation buildings are concerned, is confined to the head and second masters' houses, which are limited in extent, and not suitable to the wants and requirements of the present time. Boarders are accommodated in other houses by the head master and rented by him.

III.

It is assumed by the trustees that the information required by the queries in this paper will be furnished by the head master; they propose, therefore, only to refer to some of the questions, though they will be happy to afford any information in their power on any others.

13. A list of the exhibitions will be furnished.

19. The trustees consider that the instructions given by the masters in the course of the ordinary work would sufficient, without supplementary aid, to prepare a boy for a successful career at the universities; for the civil, military, or East India services some supplementary aid may be requisite. The trustees are not prepared to express an unanimous opinion on the latter part of this question.

21. There is a library in the head room to which the upper forms have access; there is also a general library to which the masters and scholars, with the permission of the head master, have access.

23. Daily service in the school chapel.

Attendance at public worship on Sundays.

A payment of 40*l.* is made to the head master as catechist and reader.

26. *See* p. 25 of the scheme referred to in the answer to question 8, Part I.

36. The only ground belonging to the foundation allotted to the boys for games, &c., is a ball court; but a piece of land is rented by the head master and appropriated for the use of the scholars.

38. The ball court adjoins the cattle market, and is near to several dwellings.

The trustees think it right to add that the state of repair and means of accommodation in the masters' houses are not such as could be desired, and the trustees believe that the future prospects of the foundation are much involved in the question which is now under consideration of providing more suitable premises.

(Signed) J. J. PEELE,
Bailiff and Treasurer.

Rev. B. H. Kennedy.

ANSWERS of the Rev. B. H. KENNEDY, D.D., Head Master of Shrewsbury School.

II.

1. Shrewsbury School was founded by Letters Patent of King Edward VI., A.D. 1551, addressed to the bailiffs and burgesses of Shrewsbury, giving them certain tithes to found a school, entitled

"Libera Schola Grammaticalis Regis Edwardi Sexti,"

empowering them to elect masters and to make statutes with the advice (cum advisamento) of the Bishop of Coventry and Lichfield.

The sole relation in which the school stands to any other corporate body is comprised in the two provisions of the Act (38 Geo. 3.)

(1.) That the mayor of Shrewsbury for the time being is chairman of the governors and trustees.

(2.) That when a vacancy occurs in that body the other governors and trustees nominate three qualified persons to fill it, of whom the corporation elects one.

Respecting the title, *Libera Schola*, I append an argument* which has appeared in several public prints, tending to show that *Libera* means exempt by royal grant from other superiority.

2. Before the school could be opened, King Edward died. It was in abeyance during the reign of Mary. Nor was it actually opened before the 4th Elizabeth, 1562, Mr. Thomas Aston or Ashton being the first head master, evidently a man of great ability and credit, since in the seven years of his mastership he entered 875 scholars, many of them sons of the best families of Shropshire and adjoining counties, including Sidney (afterwards Sir Philip), Fulke Greville (afterwards Lord Brook), the sons of Archbishop Sandys, &c. Of Ashton's pupils 238 only were town boys (*oppidani*), the rest are called *alieni*. If any statutes were made at this time, no record exists of them. The statutory government of the school dates from 1571. It appears that in 1569 Ashton resigned his office and directed the studies of the famous and ill-fated Robert Devereux, eldest son of Walter, Earl of Essex. His affection for Shrewsbury School caused him to move Queen Elizabeth with success to grant to the school the tithes of Chirbury (which form about one-third of its present revenues), and to take that opportunity of constituting the government of the school on as good a footing as could be secured. By reference to the indentures then made, and the schedules of ordinances attached, it will be seen that the constitution then framed for the school was in the nature of a compromise, having the advantages and disadvantages of arrangements so made. On the one hand, the bailiffs and burgesses, having the vantage ground of King Edward's Charter, but also tempted by the rich offer of Chirbury, consented to surrender their right of electing the masters to St. John's College, Cambridge, or which Ashton was a member; but they stipulated with success for the condition that the college should be bound to elect burgesses of the town. Again they consented to accept Mr. Ashton's ordinances for the regulation of the school, and to place the chief government in the joint trust of the bailiffs and head master; but they obtained (what still exists) a first claim for burgesses to all benefices and founders' exhibitions. In 1724 the corporation attempted to wrest from the college the surrendered right, but sustained defeat in Chancery and in the House of Peers. At the close of that century, the evil of the burgesses' claim to the

* I. I say that the person or persons who wrote Edward's charters could not possibly intend to use the word *libera* in the sense of "gratuitous" (1) for the simple and cogent reason, that the adjective *liber* never had, at any time, borne, or been used in, such a sense. All that is said in the charter is, that the school shall have for its title "Libera Schola Grammaticalis Regis Edwardi Sexti." There is no explanation of any word. Therefore the words must have been well known and commonly used. "Grammaticalis" *was* a word well known: it could only imply a School for the teaching of "Grammatica," the science of language, one of the "*trivial*" sciences. The meaning of the word "libera" must have been at the time equally known and used. What that meaning was, will be the second head of my inquiry. At present I affirm that it was *not* "gratuitous." This meaning has, I repeat, never belonged to the word "liber:" (a) not in classical Latin; (b) not in post-classical Latin; (c) not in mediæval Latin. For (a) as respects classical Latin, any competent person may satisfy himself by reference to the best dictionaries, as those of Facciolati and Scheller. By reading through the examples of "liber" and its adverb "libere," and especially by comparing with them the examples of "gratuitus" and its adverb "gratis," he will find that the two former words are never used in the sense of the two latter. "Liber" means "unrestrained," "uncontrolled," or "exempt," and of course we may *add* a word signifying "expense," or "payment," and say that a person or thing is "exempt" from this; but never will the word "liber" be found to describe "a thing not to be paid for." Again (b) post-classically, we have ample proof in the Latin Vulgate translation of the Bible (about A.D. 400) that *liber* does not mean gratuitous. Let us look at the passages which stand in the English Bible as follows:—Matthew x. 8—"Freely ye have received; freely give." Romans iii. 34—"Justified freely." Rev. xxi. 6—"I will give of the water of life freely." xxii. 17—"Let him take freely." Does the Vulgate give "libere" in any one of these passages? In none. What it gives is "gratie." And in a concordance of the Vulgate I find forty six references to the word "liber," in all of which it means "unenslaved," and in none "gratuitous." Again (c) mediævally, we have for reference the valuable glossary of Dufresne, Ducange, and Charpentier, of which I have used both the folio edition and also Adelung's in octavo. I have likewise consulted Lindenbrog's Codex Legum, and various other works on the Middle Ages; but although the word "liber" is one of the most frequent occurrence, I do not find the faintest trace of its ever having been used in the sense of "gratuitous," or in any sense approximating to this. On the other hand, in the Latin translation of Bingham's Origines Eccles. iii. p. 273, I find mention of a canon made at the Council of Constantinople, "qui scholas gratuitas in omnibus ecclesiis per villas et vicos institui jubet." Here observe that the writer does not say "Scholas liberas," but "Scholas gratuitas." What has been already said is alone sufficient to prove my point; but I remark further, (2) that the word "Libera" in the title of Edward's Schools must have been designed to distinguish them from other existing schools. But "gratuitousness" would have been no distinction; for of private school-keeping, as a gainful profession, no trace, I believe, is to be found in those days, while in the conventual, chapter, and collegiate schools, instruction had always been gratuitous to the poor, and, if others gave, it was probably left to their own discretion what to give. To call the new schools gratuitous was therefore needless. To the poor student of grammar they were supposed, without any further intimation, to be gratuitous, and the King and his council could not design to exempt the wealthy from the charges of education. To clinch the matter (3) it is certain that the word "libera" was not understood in those days to mean "gratuitous," for when ordinances were made under Elizabeth's sanction for the regulation of Shrewsbury School, a scale of fees was appointed to be paid by all persons entering the school, from a "lord's son" downwards, fees which to us, indeed, appear small in amount, but which would still be in contravention of the Charter, if we suppose "libera" to mean "gratuitous." Strype tells us that these schools were erected "for the education of youth in virtue and godliness," "for further augmenting the Universities, and better provision for the poor"; and the ordinance above named carried out the last object by exempting from fee the son of a burgess, if not "of ability."

II. My second point is, that "libera schola" in all probability *does* mean, "a school free from the jurisdiction of a superior corporation." I think I may venture to say that in mediæval law the word "liber" has but one general meaning, namely, "non obnoxius," "not under subjection." But as subjection was of many kinds, so of course was freedom. Thus the "libertas Romana" was possessed by churches which were free from all ordinary jurisdiction, and only subordinate to the see of Rome. The "Libera Capella" (Free Chapel) of St. George at Windsor is (or was lately) free from ordinary jurisdiction. A freedom of this kind is what the lawyer or scholar, hearing the phrase "libera schola" in Edward's days, would have understood therefrom; because such was the only known sense of the word "libera." Can it be doubtful, then, what freedom was implied? Almost all existing schools were "obnoxiæ," were attached and subservient to chapters or colleges, while hundreds, attached and subservient to convents, had been just abolished together with these. Edward and his Council desired to restore learning from its ruins, and at the same time to place it under conditions less dependent on ecclesiastical power. They, therefore, chartered all their new schools as "liberæ," exempt from that jurisdiction to which schools had generally been subject; nay, in some instances, as appears from Strype, governors were appointed by Edward himself. To these solid arguments what is opposed? Johnson's authority? Not at all. Johnson merely takes the term "Free School," and explains it in the acceptation which he knew to be usual, and which may be true in the case of many schools. He does not allude to the phrase "libera schola," and there is no proof that he was even acquainted with it.

masterships being patent and acknowledged, a new compromise was made, resulting in the Act of 38 Geo. 3. The main features of this act were—

(1.) The transference of the government of the school to a body of governors and trustees.

(2.) The abolition of the burgess right in the masterships.

(3.) The gift of the right to gratuitous instruction to all sons of burgesses.

The effect of this last provision has been greatly modified by the Municipal Reform Act of 1835, which has produced and must yet produce a perpetual diminution of the old burgesses. In 1849 the governors and trustees obtained an order in Chancery for a new scheme, which was completed in 1853. This scheme extended the education and opened exhibitions in default of preferential claimants, an alteration attended with very good results. (The same thing has since been done by the Careswell Trustees very advantageously.) The present constitution of the school will be discovered by comparison of the act and scheme; and answers to those parts of question 2 which apply to the school will be found in the scheme.

3 to 9. The documents containing answers to these questions will, I presume, have been supplied by the governors and trustees.

10. The head master receives as salary 465*l.* per annum. The school fees are also received by him. He pays capitation to all the masters, and salaries to some.

Each boy in Shrewsbury school (not being the son of a burgess, or exempt by resolution of the masters) pays a tuition fee of 15*l.* 15*s.* per annum.

At this time there are 99 boys (say 100) paying this fee.

	Capitation. £	s.	d.	Salary per Annum. £	s.
The second master receives	2	12	6	200	0
„ third master	1	5	0	100	0
„ first assistant master	2	0	0	*100	0
„ second assistant master	1	0	0	*100	0
„ third assistant (mathematical) master	1	0	0	*100	0
modern language master	2	2	0	50 *52	0 10
accidence master	1	0	0	25	0
	(and a variable allowance for teaching writing to sons of burgesses, about 30*l.* per annum).				

N.B.—Capitation fees and grants marked * are paid by the head master: the other salaries by the governors and trustees. The capitation payable to the second master was fixed by the scheme at one-sixth of the whole fee. All other payments made by the head master are matters of private arrangement between himself and the several masters who are all appointed and removable by the head master.

The first assistant master, the mathematical master, and the master of modern languages, have given occasional private lessons, by which their incomes have been increased on an annual average, 40*l.* each.

The writing master supplies the school with stationery, making the usual trade profit, about 35*l.* per annum.

Three assistant masters have rooms free of all charges, and four have dinner commons in my houses.

The salaries and tuition fees are the only sources of income, setting aside the profits of boarding, and the few cases of extra (private) tuition. It is proper to add that prior to the scheme, which settled the tuition fee, the total sum paid for the same instruction was 25 guineas.

11. The number of masters was originally (in 1562) three. The trustees now pay salaries to five, and at the present moment there are three besides the five. Of these, four are classical masters, one mathematical, one for French, &c., one for writing and mapping, and accidence; and one is now appointed as tutor for all boys below the 6th form, and to direct the studies of the non-collegiate boys. I am not able to specify the times at which changes have been made in the number of masters. I incorporated French with the public studies of the school on becoming head master, and a few years later I appointed a special master for mathematics. The number of classical masters has necessarily varied with that of boys; there has been on the average one such master for 30 boys. There are no rules respecting the proportion of masters and boys.

12. All the masters, excepting the second master, are appointed by the head master, and removable by him. He therefore has the power of arranging and regulating their several duties. I understand the second master to have the right of instructing (under the general direction of the head master) the lower school, *i. e.*, forms 1 and 2. But all the four second masters with whom I have acted have cheerfully thrown their talents into the general stock, so as to take those forms and functions in which they seemed likely to be most useful.

The head master must be a clergyman. There is no rule as to the rest. All, except the master of modern languages and the writing master, have been university men, and generally clergymen. As respects the election to the head and second masterships, it is to be expected that St. John's College will prefer its own members; but my belief is that the master and fellows would not elect to the head place any man of whose fitness they were not well satisfied. I suppose that the head or second master could be removed for good cause with the approbation of the Bishop of Lichfield.

Pensions are mentioned in the Act, but not in the scheme. I cannot account for the omission.

13 to 15. Unless the right to gratuitous instruction given by the Act and the preference in exhibitions by ordinance, be considered to constitute a foundation class, there is no such class in Shrewsbury School.

16. See answer to question 2.

The provisions of the Act have been observed.

17. See answers to questions 1 and 2.

I conceive that the right of the masters to take boarders rests upon ancient custom and the history and constitution of the school as a public school from 1562 to the present time. For this reason I did not regard with favour that clause in the scheme which formally sanctioned boarders, especially as it was coupled with a proviso not called for by anything which had occurred. But as the Master in Chancery (the late Mr. Blunt), whose judgment I highly esteemed, appeared friendly to the clause, and thought it useful as a ready answer to all cavils on the subject, I forbore to oppose it. There are no regulations beyond what appear in the scheme. Sons of burgesses, whether boarders or day scholars, would be exempt from tuition fee; all others are liable to pay it; but the masters occasionally remit it voluntarily, especially in favour of the sons of local clergy with small means. All boys are equally entitled to the advantages of the school, except as regards preference to certain exhibitions.

18. The answers will best be gathered from the inspection of three half-yearly school bills (appended) of Midsummer last.

There is no precise limit, and no supervision.

I know, generally, the means and wishes of parents and guardians, and try to meet each case, checking extravagance on principle, but allowing a somewhat larger scope when it can be afforded for a boy's good, as in bill No. 2; perpaps I might more correctly say, when I have been requested to use my own judgment without regard to expense.

The average of half-yearly bills approaches 50*l.*

Writing is now included in public tuition.

All boys, except the præpostors, have two weekly lessons in French.

Additional tuition is sometimes allowed, when much needed, but the instances are few.

My statement applies to all boys, with the exception that sons of old burgesses are exempt from tuition fee.

It is presumed that no question is asked respecting cases in which some abatement may be made on grounds of private feeling.

19. The public tuition fees in 1860 were 1,459*l.* 6*s.*

20. The number of day scholars at this time is 60. Among these, 22 are sons of burgesses, and therefore exempt from fee. The rest pay the same tuition fee (15*l.* 15*s.*) as the boarders. They have precisely the same instruction, excepting the nightly Scripture readings, which are a part of family worship. To the playgrounds at the school they have an equal right with the boarders; but they do not use them equally, nor do they use them much. They naturally come at lesson hours, and go home after lessons. To the cricket ground, perhaps, they have not an equal right, in the abstract, as I pay rent for it; but my own wish and endeavour has always been to promote the best feeling between boarders and day scholars. A few day scholars do join the school games, and I think many more might do so if they wished; but as they are more their own masters out of school, if they stand aloof I really believe they prefer doing so. A considerable number have joined the school volunteer rifle corps; and, upon the whole, as good a feeling exists between the two classes as can reasonably be thought attainable. Some *esprit de corps* must always be allowed for.

I may here observe, that some gentlemen of the town send their sons here as boarders for the purpose of giving them that full advantage of the English public school life, which it must be allowed that the day scholar does not, and, indeed, cannot obtain. Others deem it wise to send their children to a greater distance from home. I cannot be

ANSWERS.
SHREWSBURY.
Rev. B. H. Kennedy.

surprised at this, as I educate my own son at a distant school.

21, 22. Boarders reside in—

(1.) Head master's school-house, or senior hall.

(2.) Head master's rented house adjoining, or junior hall.

In this, though equally possessed and directed by the head master, a matron and another master reside. Boys are removed from it to the senior hall as they advance in age and place.

(3.) Second master's house; room for about 20.

(4.) The master of modern languages has of late years been allowed to receive four boarders. This is not to be regarded as a right.

All boarders have the same discipline, including the nightly prayers and readings.

The head master rents a third house, laid out in studies, four boys in each. In this house his boarders chiefly live in the daylight hours, but dining and sleeping in his other houses. There are also three common rooms for senior boys, in one of which is a good library, to which each præpostor gives a guinea on leaving school. After tea all boys not in common rooms attend in the great school with a master, and prepare their work. At 5 minutes before 9 the prayer-bell rings to summon all boys, servants, &c.; after which the head master reads and comments on some passage of Scripture, taken in order. The prayers are read, and the junior boys go to bed, the seniors remaining in common rooms till 10¼ p.m.

The head master has room in his two houses for about 70 boys. Five sleep in the larger bedrooms, three in the smaller; all are ventilated. No difference in kind or charge.

23. Diet is uniform. Breakfast, 9 a.m.; tea, sugar, milk, bread and butter are supplied. Dinner, 2 p.m.; two meats, vegetables, bread, table beer; pudding or tart four days a week. Tea at a time varying from 6¾ to 7¼, according to season; supply as at breakfast.

There is no difference; except that rations of tea and sugar are given out twice a week in the senior hall, while in the junior the matron makes tea for all.

If porter or wine be required on account of health in any case, they are procured and charged as anything else obtained from a tradesman.

24, 25. To all these questions the answer is simply negative.

26. There is no recognition of food being obtained from shops; but, on the other hand, there is nothing to prevent a boy from doing this.

Going to an inn without leave is a high offence.

That boys do and will resort to shops and expend their money in them, more or less wisely, is a matter of course here, as I believe it to be in all public schools. I have no reason to complain of any special evil now in this school. Drinking, as a vice, which many years ago had some hold in the middle forms, never in the sixth, is now, and has long been, obsolete. The adoption of the college cap, the evening attendance with a master in school, and the nightly reading and prayers, appear, under Providence, to have been the principal means of prevention; though I likewise set much value on the organized school games, as occupying the energies of those whom we may call the non-reading boys, and withdrawing them from other and vicious excitements.

27. Boys bring to school two pairs of sheets. No other charge is made for furniture. Mischief is checked by occasional fines levied on the weekly allowance.

28. There is no great scope for choice. The head master's boarders are placed at first in his junior hall, unless rank in school, size, or some special reason, cause them to enter the senior hall at once. The second master receives any boys whose parents apply to him for the purpose.

29. See answer to question 21.

There are no other recognized boarding houses, nor, indeed, any houses besides, devoted to this purpose. A few boys live in the town with respectable persons to whom their parents have chosen to confide them, and attend the school as day scholars. The masters assume no responsibility for them out of school hours, and the parents know this. I have never heard of any abuse attending this practice. I believe that the persons entrusted with the domestic care of such boys are carefully chosen, and do, in fact, fulfil their duties to the parents and the boys.

30. I have had no occasion to test this matter. I presume that rules could be made, if required; and I have no doubt the governors and trustees would concur with me in sanctioning them.

31. I should think the average is about three years. Some boys stay seven or eight, others only one or two; coming for a kind of finish to their education before they go into some active profession or business. This is specially the case with boys from Lancashire and its neighbourhood, who have some post prepared for them to fill.

32. The number of boys in the school now (October 14, 1861) is—

Sixth form	22
Fifth form	35
Fourth form	34
Third form	31
Second and first	9
Total	131

Before Michaelmas the number was 141; 13 having left school at that time, and 3 joined. The number is always lowest in this quarter.

I cannot give the figures desired under the second head. It will, perhaps, be considered enough to state that during the last 20 years the number of boys in the school has fluctuated within very narrow limits, between 80 as a minimum and 130 as a maximum, having in that time never passed the latter number until August last. The greatest number the school ever reached was 295, in the year 1832; from that time the number had fallen to 228 in 1836, at which time I became head master, and it continued to decline for six years until it became comparatively stationary. This decline was coincident with, and manifestly caused by, the foundation of so many proprietary schools. Hence Shrewsbury School has been suffering from inanition during the last 20 years; and whatever it has done has been done under great difficulty and discouragement. I allude especially to the want of a sufficient supply of reading boys to keep the rate of scholarship in the sixth form as high as it was when the school numbered more than 200 boys.

The present boarders are thus distributed:—

Head master's senior house	30
Head master's junior house	34
Second master's house	5
Master of modern languages	2
Total	71

Number before Michaelmas was 82.

B. H. KENNEDY.

Accounts referred to in Answer 18.

HALF YEAR'S BILL (Midsummer 1861) of a PRÆPOSTOR, Son of a Clergyman.

No. 1.

(*Near the Average.*)

III.

1. I am not aware of any positive rule on these two points. In two or three instances, I believe, I have admitted a boy in his 9th year, a few in their 10th and 11th; but the bulk of new comers are of the ages from 11 to 16. When I have received a boy older than the latter limit, I have always required strong testimony to his good character and habits.

2. I take care that a boy is fit to receive the instruction of the form in which I place him. I give no more examination than is sufficient to determine this point.

3. There is no rule on this head. It is matter of discretion, always regarded as important.

4. A new boy is never made a præpostor (VI. 1). With this exception, he may be placed in any remove for which he is deemed fit.

5. The age of 20, by a rule in the scheme.

6. See schedular tables.*

7. He has such power, subject to the general provisions of the scheme.

8. They have no voice by right; but the head master would act most unwisely if he did not often consult them, not only for the benefit of their advice, but also with a view to secure their confidence and friendship.

9. A boy rises altogether by proficiency. Age and standing, however, in connexion with character and conduct, are sometimes referred to, both in striking a balance, and in promotion at Lady-day and Michaelmas, when there are no general examinations.

* Note by Mr. Calvert, classical assistant:—"Private instruction is not given at Shrewsbury on the system apparently contemplated in this form (E.) Any boy requiring extra tuition receives it on terms arranged privately with the several masters. In my own case, a single pupil charged at the rate of four guineas a quarter, receives instruction at my own rooms for an hour every other day, precisely as a student reading with a private tutor at Cambridge. Our only restriction is, that subjects forming part of the school work shall *not* be read privately. The number of pupils is of course limited by the amount of time at each master's disposal. I have never taken more than 8; sometimes I have not had more than 2."

ANSWERS.

SHREWSBURY.

Rev. B. H. Kennedy.

The following table of marks in a Sixth Form examination may be taken as an index of the general valuation of studies:—

Total, 3,000 marks.

1. Translations from Greek and Latin authors	600	for 4 papers.
2. Composition, Greek, Latin, and English	700	„ 5 „
3. Philology, Greek, Latin, and English	400	„ 2 „
4. Divinity	300	„ 2 „
5. History and geography	400	„ 2 „
6. Mathematics (including arithmetic)	600	„ 3 „
	3,000	

English theme is rated for 150 marks; but my view is that every paper in which English is written (excepting the mathematical), and every one in which translation takes place, either into English or from English, is an exercise in that language to some extent. I have heard, and it will probably be confirmed by members of the Commission, that good classical scholars have suffered loss in their university examinations by want of power or grace in their native tongue. I have always kept this in view, both in teaching and in examining.

French is not considered in the general examinations: but classes in it alone are published, and prizes given at Midsummer.

The question in the last clause I answer in the affirmative.

10. Answers to this question have appeared, or will appear, under other heads.

11. As to fees, see answers to Part II.

Classics do not throw mathematics into the shade. There is that variety which might be looked for. Some good classical scholars make small progress in mathematics; some mathematicians are poor scholars; a few excel in both; many in neither.

French is taken up earnestly by a few boys; but generally I regard the French learnt in a public school as a small stock to be improved at a later time. On this principle, when my Sixth Form has been a very good one, I have myself given them a few lessons in German, as a start for their future studies; and several have told me that they were induced in this way to carry on German at college and subsequently. As a general rule, I have not thought it proper to try to do more than I could hope to do well.

12. There are half-yearly examinations in all the reading, except French, which has its own separate classification of merit. They are held by the masters who teach the several forms. They extend throughout the school.

13. I append a list of exhibitions, &c. (see p. 283). Only once, as far back as 1840, has any contest for an exhibition taken place at the school. Preferential claim sometimes carries an exhibition. In other cases, frequent examinations and daily lessons have taught boys to know each other's strength, and they do not offer themselves as candidates when they have no hope of success.

Election to the Careswell exhibitions and prize is made by an examiner sent by the Dean of Christ Church. He examines in Homer, Virgil, Greek Testament, and translation into Latin prose.

Election to the Millington scholarships is made at Magdalene College, Cambridge.

The school prizes for composition are given, or withheld, on the same principles as at the universities. The other prizes are the result of school examinations, general work, conduct, &c., not specially examined for.

14 to 17. The tutorial system of Eton, Harrow, and Rugby does not exist at Shrewsbury. A master is now appointed to superintend the private tuition of all boys below the Sixth form.

Extra private reading, when allowed at Shrewsbury, as it is in a few cases, is designed to bring a boy forward in some subject which is of importance to him for one reason or another.

18. It is practicable to some extent and not unusual to pay attention to individual character, &c. Thus, if a boy has decided powers and taste for mathematics, with industry and conduct, and no such taste for classics, I excuse him from verse composition in order to do mathematical exercises instead. And to boys who are going to be engineers or surveyors, or even solicitors or surgeons, I have excused some work, that they may attend the School of Design. I may also refer to the non-collegiate class, elsewhere mentioned.

19. I have no doubt,—indeed my experience proves,—that the ordinary school work in classics and mathematics is sufficient to ensure success in competitive examinations to an able and attentive boy. If he wished to take in modern languages, he would require more instruction.

ANSWERS.

SHREWSBURY.

Rev. B. H. Kennedy.

Again, in modern history and geography (as indeed in all subjects) he would do well to enlarge his sphere of knowledge by private reading. In all this he would have the head master's advice and assistance when he sought them.

20. See schedule, p. 330.

21. The school has a library. The boys have not access to it.

The "head room" contains a good classical and standard English library. It is in the care of the head boys.

By virtue of a gift from me, the 12 head boys are *ex officio* members of the Natural History and Antiquarian Society, which has a museum and fair library.

There are in the school some models, diagrams, &c. in natural philosophy, but no experimental apparatus. I fear there would hardly be time or staff to work this unless our numbers were much increased.

22. I tried choral music for two half-years, and it was taken up with some zeal at first; but this flagged, and I saw no chance of efficiency for it with our numbers; it was therefore given up.

Fifteen boys have attended the School of Design. It is useful for those who have time to give to it.

23. Discipline is maintained by a system of rewards and punishments.

One of the masters has the salaried office of "Secretary for Discipline." He keeps a book, with two pages for each boy's name, in which are recorded his merit marks and penal marks. Merit marks are awarded monthly. The greatest number obtainable by one boy is twelve; namely,

For good classical work - - -	2
,, mathematical work - -	2
,, French work - - -	2
,, exercises - - -	2
For punctual attendance at chapel -	2
For absence of penal marks - -	2
	12

Four merit marks purchase a half holiday in the ensuing month; any number above this is rewarded by merit money assigned.

Boys who have no penal marks during the half year, and, in the summer, those who are in three first classes, are allowed to go home several days before the rest.

C.P. (common penal mark) implies 50 lines of Milton to be written out, 25 on a page.

E.P. (extra penal mark, or detention,) implies the being detained half an hour of play-time, with a master.

I.L. (idle list,) is a list of boys subject to detention for an hour and a half on Tuesday, Thursday, or Saturday afternoon. A boy may be punished by so many I.L.'s, or, in the case of some offences (as "out of bounds,") he may be put on for an indefinite time, and taken off after improved behaviour.*

The sixth form is punished by C.P. only, as a general rule. The rest of the school by E.P. generally (each E.P. = 2 C.P.) but when a boy gets too many E.P. he may incur C.P. additionally.

Boys in the fifth form fill the office of "school monitor" for a week by rotation, being excused a part of their school work during that time. The school monitor is in the nature of a clerk to the "secretary for discipline." He carries round the penal box before the end of lessons, in which each master deposits his paper of punishments or complaints. At second lesson he carries round the sick books and the "Penal Sheet," a daily MS. of the secretary, on which are written, in four columns, the newly given penal marks and old C.P. due (which are collected). These are read out in the several forms. If a complaint has been made, and an offence left to the head master for punishment, his attention is drawn to it on the penal sheet by a large cross. The head master takes special note of this sheet and of the sick books; he writes at the foot any notice or remark to be read out in one or more forms, and gives any written or verbal directions to the school monitor which circumstances may require. These are communicated by the monitor in the proper quarters.

The cane is not used in Shrewsbury school.

Flogging with birch is applied by the head master as sparingly as possible. It is not used to punish a bad lesson or exercise, but either for moral offences or serious indiscipline, as smoking, or repeated indiscipline (as "out of bounds,") bullying, wilful disrespect (both very rare), &c. Idleness may obviously assume the aspect of repeated indiscipline or of disrespect, and so may incur flogging, but not otherwise.

Boys in the sixth form are exempt from flogging.

Public expulsion has only been applied by me once during my 25 years of office, in 1843, when I expelled (to the great satisfaction of the whole school,) a very immoral boy, who had not been at school a year, and respecting whom I had been misled by false representations when he came to school. (The boy and parent are since dead.) Private dismissal during my first eight years I resorted to in about half a dozen instances, chiefly on account of drinking. Subsequent instances have been few and far between. It is now six years since I last dismissed a boy.

Private advice to a parent to remove a boy may sometimes be given, but is not in the nature of punishment, as the parent is not obliged to act upon it. It is a step I have very seldom taken.

24. (1.) The head master preaches in chapel on Sunday afternoon. His sermons are sometimes specially addressed to the boys as schoolboys, or on account of some occurrence; at other times they are more general, but always prepared with regard to boyish capacity; though as this varies in boys almost as much as in men, some sermons must inevitably "fly over the heads" of younger and unthoughtful boys. The Scripture reading and exposition before prayers at night is very valuable. Observations made are commonly extempore; but a Commentary is at hand, and sometimes read when fatigue recommends its use.

(2.) The head master prepares the candidates for confirmation, as any other minister would. He has, of course, the advantage of knowing them intimately. I have used the tracts of Bishop Wilson, Ridley, Dr. Vaughan, &c., for this purpose, in addition to my own individual instruction.

(3.) Boys attend morning service at St. Mary's Church, the chancel of which is fitted up with the school seats. Holy communion is administered monthly, and on festivals; the attendance of a boy is the act of his own free volition.

(4.) On Sunday, at 8h. 5m., a.m., prayers in great school. The forms then separate for their lessons in divinity.

Breakfast at 9¼ a.m.
Church at 11 a.m.
Dinner at 1¼ p.m.
Chapel at 3 p.m.
Tea at 6¼ p.m.
Boys preparing divinity from 7 to 9 p.m.
Scripture reading and prayers, 9 to 9.20 p.m.
Divinity lessons on Monday morning.
No classical exercises in hand on Sunday.
No C.P. required on Monday morning.

These are the precautions taken to enable boys to use Sunday as a day of purely religious exercise. I do not see my way to the *enforcement* of religion by any stricter discipline. Games, of course, there are none on that day, but it is too much to believe that no light literature is ever read. On such points I can only trust to exhortations, good examples, &c., and the blessing of God. Espionage I entirely repudiate.

(5.) Divinity papers are set in all the examinations.

25. Absence from morning chapel is punished with 4 C.P. or 2 E.P. I do not think it can be said there is an absolutely fixed punishment for anything else, unless it be flogging for smoking or for falsehood, in the rare case of their being proved. In punishing for bad lessons or exercises, so much depends on the circumstances, that precise uniformity would hardly be justice. I generally, in the sixth form, give from four to six C.P. as a punishment for a lesson or exercise which I deem ill prepared. But I may see occasion to double or treble this. I have, happily, great reason to believe that the boys consider they receive justice at my hands.

26. See answers to 23 and 25.

The several masters award their own lesson punishments, and others given for minor offences within their cognizance, as unpunctuality, disturbance in school, and the like. Any cases of falsehood, smoking, "out of bounds," absence without leave, &c., are referred to the head master, who punishes according to his judgment of the requirements of discipline. If the case can be safely disposed of without flogging, he is glad to do so and glad to say so; but he inflicts it when he thinks it really called for. Serious occasions, therefore, rarely occur, and the præpostors do all they can to prevent their occurrence.

The head master sees every punishment in the penal sheet and in the secretary's book; and he has thus the opportunity of observing the principle of punishment adopted by other masters, and of discussing it with them, if need be, with a view to justice and uniformity.

27 to 30. The præpostors (VI. 1) twelve in number, have obtained their rank by superior literary merit only, but a præpostor does not lose his rank as such, though he may change his place in his remove. He has certain privileges—wearing a hat, carrying a stick (if he chooses), going out of bounds, going home a day earlier than others, &c.

His special duties are, to read lessons in chapel, call the school roll, &c.

* Boys are obliged to do school-work or exercises when detained penally with a master.

ANSWERS.

SHREWSBURY.

Rev. B. H. Kennedy.

But far more important are the general duties of the præpostors. They are a kind of senate or representatives of the school in relation to the head master and to discipline. They engage, by signature, on the part of the school, to do and to prevent many things, and they fulfil their engagements. They know that they are expected to be exemplary, and as a general rule they are so. If an evil is to be stopped, or an offender given up, or a new rule made, the head master addresses the præpostors on the subject. If a favour is asked for the school, or a remonstrance is wished to be respectfully made, they address themselves through the head boy to him. A general good understanding exists mutually. Sometimes a compromise has been admitted; but if the head master considers a certain course essential he insists upon it, giving his reason, and the præpostors, after consideration, have always yielded the point.

I consider this "monitory" system the very bone and sinew of English public education. Its value, as a training for the duties of life, is immense, principally to the præpostors or monitors themselves, but reflected from them to the school generally, by which they are recognized as leaders. As regards discipline, this system saves public education from the risk of degenerating into a confused struggle of force and fraud.

As to the power wielded by præpostors, they are entitled to set punishments to the extent of 10 C. P. I do not think they ever exercise this power, yet I believe they would if they thought it was questioned. They stand together, and govern by custom and prestige. They are not empowered to exercise force; if they ever do, they know they are quitting the vantage-ground of authority, and taking the level of other boys. Twenty years ago, the question came before me. I decided it in this way, and deprived a boy (for a time) of his præpostorship for using a stick to punish another boy. Nothing of the kind is now done.*

The præpostors are allowed, collectively, to exact certain services for the head room (quite unobjectionable) from four boys weekly. These boys are "put on" by rotation throughout the school (below the sixth form) from week to week. Individual fagging does not exist, and the præpostors are bound to prevent anything of the kind.

Football is the only game at which on certain days all boys are required to attend. The præpostors engage to exempt any boy named by the head master as unfitted to join the game.

The privileges given to præpostors do most certainly tend to suppress tyranny, by the establishment of a limited legitimate rule. There is nothing in them, or in any part of the discipline, prejudicial to health. Cases of delicacy should always be made known to the head master, that they may be exempted from athletic games if needful.

As there is no individual fagging, the junior boys are not called away from their studies unduly.

I cannot say that abuse of power would certainly come to the knowledge of the masters, though there would be a chance of it. I believe it to be rare, and I believe the feeling of the præpostors is to prevent it.

31. Thirty-six.

32. Eight weeks in June and July, and eight weeks in December and January.

Till the present year, each vacation was seven weeks, but a few days had always been allowed in the middle of the half year for boys to visit friends, and the railway facilities had caused this privilege to be somewhat abused, and to grow into a week's holiday. Considering this an evil, I have at length abolished it, but to allay discontent I found it necessary to allow the addition to be made to the two vacations. Some modification may hereafter be made.

33. There is but one regular half-holiday in the week, Saturday, but there are occasional half-holidays, some of custom, others contingent (as for university prizes, &c.), which, upon an average, almost amount to a second in the week.

34. Uniformly at 7.30 in the morning. At night boys above 4th form 10.15 p.m., the rest 9.30 p.m.

35. No games are allowed before second lesson.

After second lesson, daily, 12—3 free.

Monday, Wednesday, and Friday afternoon, 5 to locking-up, free.

Tuesday and Thursday afternoons, 4 to locking-up, free.

Saturday afternoon free.

These free times are subject to meals, callings-over, and the penal detentions mentioned in answer 23.

36. About 5 acres, but of this 4 acres are rented by head master.

37. Play ground and fives court, partly grass, about $\frac{3}{4}$ acre; "school garden," so called, in front of school, bare; serves for an occasional game at "prisoner's base" before locking up. Cricket ground about 4 acres, half a mile from school, also used for football.

38. All the school play-grounds are abundantly open; the cricket ground quite so, and though there are a few houses abutting on the fives court in one of its angles, the only inconvenience is an occasional claim of damage for broken windows.

39. Cricket during the usual season.

Boating for boys above 4th who can swim, from Easter to Midsummer.

Foot-ball from Michaelmas to Easter.

"Hounds" (occasionally) from Michaelmas to Christmas (these are runs in the country and back).

Fives, with wooden bats, at any season.

Quoits do.

Leaping, climbing pole, and other gymnastic exercises.

Athletic games, with prizes for running, leaping, throwing, &c., twice or thrice a year.

Bathing-men attend the river at certain hours during the season, and there is a bath, where swimming may be learnt.

40. The Severn winds round the town in the shape of a horse-shoe. The school stands on the northern brow of the hill opposite the castle, on the isthmus. Boys are allowed to go two miles into the country in a northerly direction; their cricket ground being in that line. But the two miles are not strictly construed; what is really forbidden is, their going the opposite direction into the town, and their crossing the river by the bridges, or by a ferry. The præpostors engage that this shall not be done in the game of "hounds," which is one of the conditions on which it is sanctioned. The walks on this side in bounds are very agreeable in several directions, and boys enjoy them greatly.

41. Many boys attend the drilling master and learn single-stick. Many practise gymnastic exercises, for which means are provided in the play-ground at the school. Boys teach one another to swim at the bath, with a view to the boating; there is no master for the purpose.

During the last year a volunteer rifle corps has been formed, numbering about 80.

42. Almost all boarders have taken a part in the school games. There will always be a few boys who do not really care for them, but even these will not wholly stand aloof. Many boys of high intellectual proficiency have also excelled in one or more of the games. I have no doubt this has been advantageous to them in more ways than one. Some of our best day scholars have taken no part in the games, giving themselves almost wholly to study. I have in my mind two or three of these who are still devoted students, and good men, but who would have profited for active life by more sociality and more play at school.

I have not observed any difference in the tendencies of different studies as respects the games. Some of our first mathematicians have been good bowlers; but I cannot venture to draw any conclusion from this fact.

43, 44. I cannot answer these questions duly without referring, in some brief measure, to my own personal experience in the work of education. During 6 years from my degree of M.A. I was an assistant master at Harrow. I accepted the Head mastership of Shrewsbury school at Midsummer 1836.

At Shrewsbury some reforms were needed; but I had very little difficulty in achieving them, because I found a sixth form of high merit, ready and willing to co-operate with me, as I was ready and willing to consult with them, for the good of the school. Reference to the prize list under the years from 1839 to 1844 will show the calibre of the senior boys whom I had then the happiness of teaching, while there are others also, doing excellently well in life, who were not competitors for university distinction. Dr. Arnold had shown (what previous educators, conscientiously fearing to profane holy things or to promote hypocrisy, had doubted or denied)—that it was possible to bring religious influence to bear on boys in public schools.

Emboldened by his example, I took the first occasion of addressing the school in chapel on the duty of attending the holy communion, at the same time explaining the principle on which I should rigidly act, of severing this question from school discipline altogether, even to the extent of not allowing attendance or non-attendance to modify my reports of character and conduct. On the Sunday after the sermon 28 boys attended holy communion, for the first time at school, and the practice has continued, lately at a higher average of numbers, from that time to the present.

In other respects also, the conduct and discipline of the school have been improved. The introduction of the college cap, and that of evening attendance in the great schools followed by Scripture reading and prayers, have been followed with salutary results, in preventing evil certainly,

* In writing this, I request to be considered as not judging the case of other schools, in which I can see that reasons exist for allowing a greater power to the head boys, and the withdrawal of such power would be a serious danger to discipline, at least for the moment.

ANSWERS.
SHREWSBURY.
Rev. B. H. Kennedy.

and I hope and believe, in promoting good likewise. Our discipline of rewards and punishments has been elsewhere explained.

The health of the school has been peculiarly good. Epidemic complaints have been rare with few cases, and not one fatal. No death has occurred in the senior hall, only two in the junior, 20 and 5 years ago, the latter from pulmonary inflammation in a weakly frame.

The school games have been organized on a more complete system; and though I think them rather overdone for a school of this size, I recognize their useful influence on the physical and moral character of the boys.

As respects the *results* of our education in after life, I cannot say that I have any reason to be dissatisfied with them. The instances of moral failure within my knowledge are very few, and those few traceable to special domestic causes; while the only striking one is so abnormal in all its circumstances, and so unconnected with any school influence, that I need not here dwell upon it further than to say the only lesson taught by it is this—that there is neither wisdom nor kindness in raising a boy from a humble station on account of mere talents, without a good promise of moral excellence.

Shrewsbury men in general have not been heirs to large properties, but such as had their own way to make in the world; and we know that in this competition the race is not always to the swift, nor the battle to the strong: the mediæval legend of "Reineke Fuchs" is as true in its moral now as when it was first written. In public life, at the bar, and in the army, Shrewsbury has been sparingly represented in point of numbers, but some of its nurslings have held, or are holding, honourable places in these professions. But the bulk of Salopian names is to be found in the clerical profession, and their fields of active usefulness have been the universities, the schools, and parishes of England. It is, perhaps, unnecessary for me to supply any list of names from these spheres of action. The schedule referred to in answer to question 20 will be found to contain all the requisite information on this head.

As respects our *deficiencies*, the chief of them during the last 20 years has been the want of a sufficient supply of boys. It has, indeed, been a hard struggle to maintain the credit of the school as a training place for the universities with so small a total as 100 boys, more or less. Yet at Cambridge we have had the good fortune to maintain it satisfactorily; and at Oxford, though our candidates can be but few, we last year obtained the first junior studentship at Christchurch, the first open scholarship at Exeter College, a scholarship at Jesus College, one first class, and one second, in moderations.

If it were asked why, with conditions apparently favourable, Shrewsbury School has been so ill supported, the answer, I conceive, would be to this effect. Schools are upheld and extended by influence and combination far more than by their intrinsic merit, whatever it be. Some have family connexion and influence; some joint-stock influence and exertion; some the influence of religious parties. Shrewsbury School has nothing of the kind. It has relied on its own unassisted merits, and those merits appealing to a portion of society which becomes smaller and smaller every year; those, I mean, who still ascribe some value to a university education and to classical training. But to pursue this consideration would, I think, lead me away from the prescribed track.

In considering "*what a great public school might accomplish*," I shall not be expected to theorize in humble imitation of Milton and Locke. Briefly, with respect to the education of the intellect, I consider language, with the laws of number, quantity, and form, as constituting the elements of liberal instruction. In language, I regard Latin as the proper basis, whatever direction further development may take. This further development may be directed either by the way of Greek on the present classical system, or in the course of English grammatically taught, French, and, if practicable, German also.

Shrewsbury is, I believe, the only school before the Commissioners which has so far condescended to the spirit of the times as to offer to the public a choice between these two developments of a liberal education, by adding a non-collegiate class to its old system. We have done this now for seven years past, but neither time nor numbers suffice to give any large and sufficient induction of the success of the plan. I have, however, been led to believe that it may be worked well with adequate numbers and support from the public.

With large numbers, say 500 or 600 boys, engineering and military departments might be practicable; but, upon the whole, I should say these were better made distinct schools, and the education of the public school distributed, as with us at Shrewsbury, into the collegiate and non-collegiate departments. Some one may suggest that even these would be better apart; but when he considers how important it is that our solicitors, our medical men, and our upper commercial classes should be not only liberally educated, but in a good social relation to the persons who study at the universities, he will desire to unite them under one discipline in public schools.

The University prize list of Shrewsbury School is before the Commissioners; but it is proper to add that all its candidates for the ordinary degree of B.A. have been successful; that its few candidates for commissions in the army and navy have passed their examinations, some with distinction; and that five, being all who have competed, have gained appointments in the Civil Service of India. These results have been obtained from an average number of 100 boys during the last 20 years. It is necessary to call special attention to this circumstance, in order that the returns of work required and done in the several forms may be considered with proper allowance. We have been obliged to make many shifts: to place boys in the same forms, whose degrees of knowledge and power, especially in respect of composition, were widely different, and, therefore, to give different kinds and quantities of work to boys holding the same place and rank. With 250 boys, or even with 200, we should have been able to constitute the school fully, without lowering the standard of any form considerably; though it must always happen that a few boys, on account of age and size, will be above their true place in respect of intellect and acquirement. The following I regard as a sufficient model of a classical school, well constituted as to numbers and divisions:—

Form.	Removes.	Boys.	Classical Masters.
Sixth - -	1st - -	12	1 (head master).
„ - -	2nd - -	12	
Upper 5th - -	1st - -	12	1.
„ - -	2nd - -	14	
Lower 5th - -	1st - -	16	1
„ - -	2nd - -	18	
Upper 4th - -	1st - -	16	1.
„ - -	2nd - -	20	
Lower 4th - -	1st - -	16	1.
„ - -	2nd - -	20	
Third - -	1st - -	18	1.
„ - -	2nd - -	18	
Second and 1st -	- - -	38	2.
Total -	- - -	230	8.

For this number there would also be two or three mathematical masters, and two of modern languages.

If the number of boys rose to 300, we must add a lower third form, and make a small addition to most of the other forms; but I mention the number of 230 (about what I found at Shrewsbury) as ample for the satisfactory constitution of a classical school, supposing boys to come reasonably well prepared on the average. My experience, however, obliges me to say that the preparatory education of the boys who are intended for public schools is in a very unsatisfactory state, not more than one in ten coming to Shrewsbury sufficiently well grounded. If non-collegiate classes be further supposed, say of 70 boys, two more masters would be needed, or, including another modern language master, three, and the boys in it would rank in school according to their rate of acquirement in Latin.

It is often said, especially it was said by one of the trustees before Mr. Martin of the Education Commission, that our smallness of numbers is chiefly due to the defectiveness of our means of accommodation. I admit that these are old, unattractive, and in some respects inconvenient and inadequate. Still the houses are solid, well ventilated, and shown by long experience to be more healthy than many places of new and elaborate construction. Therefore I cannot regard this ground as the true one.

At the same time I cannot but wish that exertion had been made many years ago to rebuild the houses in accordance with the demands of the age. It seems a little hard that while new schools without any endowments can venture to build large and extensive premises, and even to incur a debt (as in one case) of 50,000*l.* for that purpose, a school having an endowment of 3,000*l.* a year, of which two-thirds are applicable to education, having also an established position and name, should fall into comparative decay for want of that amount of energy which would have enabled former trustees to borrow 20,000*l.* for the complete restoration of the premises, providing for interest and repayment, partly by the temporary stoppage of exhibitions, partly by capitations, which I should have been only too glad to concur in. The present trustees have

ANSWERS.
SHREWSBURY.
Rev. B. H. Kennedy.

within the last few years taken a wise step towards remedying the wants of the school. They have purchased certain premises hitherto rented by me, and essential to future expansion. They may, perhaps, be deterred from doing more at present by consideration for me, being aware that it is now too late for me to derive any personal advantage from new premises. This indeed is true; but I am nevertheless desirous that no such consideration should stand in the way of the public welfare as respects this school.

There is no doubt that Shrewsbury School is injured also by the misunderstanding so prevalent in regard to its title, "Free Grammar School"; the common notion being, that "free" means "gratuitous," and a "grammar school" one that is appropriated to the liberal education of a local middle class. Yet neither of these interpretations is correct; and Shrewsbury school, from its opening to the present date, has been a public school for all classes, and for the whole realm. Considering that one third of the endowment was given by Queen Elizabeth, it would seem that a fitter title for the present time would be "The Royal (Grammar) School of King Edward VI. and Queen Elizabeth at Shrewsbury."

The constitution of Shrewsbury School, as settled 13th Elizabeth, appears to be more distinctly public than that of any ancient foundation school; and the legal opinion given to the trustees by Sir John Romilly and Mr. Kenyon is to the same effect. There would seem to be no reason why the several ends of such schools should not consist with each other now as of old: why openness to all the realm as a place of liberal education should not consist with the education free of cost of a suitable number of needy boys, proper, by their ability and conduct, to be prepared for a learned profession. I am saying nothing that interferes with the existing right of burgesses to gratuitous instruction, but merely suggesting a principle on which their decaying numbers may be wisely supplied in the future arrangement of the school. The fee of fifteen guineas is certainly not too large in itself for the remuneration of so many masters, but the persons who cannot afford it may be fit recipients of future gratuitous instruction to a limited number.

If funds could be found for the purchase of certain other adjoining and attainable land, and for the erection of proper buildings, (a cost, perhaps, of 30,000*l.*,) there is no good reason why Shrewsbury School, with its fine air and great accessibility, should not become a large place of education for non-collegiate as well as collegiate students. The means by which such a design could be achieved are a subject too large and too delicate for my present consideration.

(Signed) BENJ. H. KENNEDY.

Referred to in Answer to Question 13.

LIST of EXHIBITIONS, FELLOWSHIPS, and SCHOLARSHIPS, to which the Scholars of the FREE GRAMMAR SCHOOL at SHREWSBURY are entitled or have Claim.

Number.	Nature of Advantage.	By whom and in what Manner Founded or Regulated.	At which University or College.	Annual Value.	How long Tenable.	Qualifications and Orders of Preference.	By whom elected, and to whom and when Notice is to be given by or on behalf of any Candidate.
				£ s. d.			
1	Exhibition -	The trustees of the free school previously to 1796.	Cambridge University, St. John's College.	50 0 0	- - -	1. Scholars of the school being sons of burgesses of Shrewsbury, born in the said town of Shrewsbury, or in the suburbs of Shrewsbury, or in the Abbey Foregate, Shrewsbury; in default -	Electors:—The trustees of the school.—Notice to be given to the head master, and to the school bailiff.
2	Do. -	Do. - - -	Do. - - -	50 0 0	- -	2. Scholars of the school born in the parish of Chirbury; in default - - - -

1861. G. Christian, Balliol College - - Moderations.

II.—Cambridge.

A. CLASSICAL TRIPOS.—(1.) FIRST CLASSMEN.

1840. Francis France, St. John's College - - Senior.
1841. E. M. Cope, Trinity College - - - Senior.
J. Bather, St. John's College - - - 2nd.
H. Thring, Magdalen College - - - 3rd.
1842. H. A. J. Munro, Trinity College - - 2nd.
Francis Morse, St. John's College - - 7th.
1843. G. Druce, St. Peter's College - - - } Sen. Æqu.
E. H. Gifford, St. John's College - - - }
1844. W. G. Clark, Trinity College - - - 2nd.
1846. H. De Winton, Trinity College - - - 3rd.
1848. J. E. B. Mayor, St. John's College - - 3rd.
1849. H. C. A. Tayler, Trinity College - - - 4th.
1851. J. W. Taylor, St. Peter's College - - - 12th.
1852. Robert Burn, Trinity College - - - Sen. Æqu.
Philip Perring, Trinity College - - - 4th.
W. Chandless, Trinity College - - - 5th.
Arthur White, Magdalen College - - 16th.
1854. S. H. Burbury, St. John's College - - 2nd.
G. P. M. Campbell, Magdalen College - - 7th.
H. Day, St. John's College - - - 9th.
1856. E. L. Brown, Trinity College - - - Sen.
1857. J. R. Lee, Magdalen College - - - 5th.
1858. E. C. Clark, Trinity College - - - Sen.
A. W. Potts, St. John's College - - - 2nd.
S. Butler, St. John's College - - - 12th.
1859. Arthur Holmes, St. John's College - - 2nd.
1860. R. Whiting, Trinity College - - - 6th.

(2.) SECOND CLASSMEN.

1840. Mynors Bright, Magdalen College.
G. Sandford, Magdalen College.
1842. G. Nugee, Trinity College.
T. F. Barstow, Trinity College.
E. W. Montagu, Caius College.
1843. R. H. Cobbold, St. Peter's College.
1845. J. G. C. Fussell, Trinity College.
1850. C. E. Jenkins, Magdalen College.
1851. C. F. Holmes, St. John's College.
1852. G. B. Morley, St. John's College.
1853. A. Druce, St. John's College.
1854. W. Elliott, Magdalen College.
1858. H. M. Luckock, Jesus College.
H. T. Barff, Trinity Hall.
1860. W. Clark, Magdalen College.
H. C. Raikes, Trinity College.
1861. J. B. Twist, Magdalen College.

B. MATHEMATICAL TRIPOS. (CAMBRIDGE.)

(1.) WRANGLERS.

1840. H. Rothery, St. John's College - - - 19th.
1843. E. H. Gifford, St. John's College - - 15th.
1851. J. S. Clarke, St. John's College - - - 11th.
1853. H. Morgan, Jesus College - - - 25th.
1854. B. W. Horne, St. John's College - - 4th.
H. Day, St. John's College - - - 5th.
S. H. Burbury, St. John's College - - 15th.
1858. E. L. Horne, Clare College - - - 40th.
1859. T. G. Vyvyan, Caius College - - - 9th.
1860. G. Macfarlan, Trinity College - - - 11th.
R. Ferguson, St. John's College - - - 40th.

(2.) SENIOR OPTIMES.

1840. H. A. Marsh, Trinity College.
Mynors Bright, Magdalen College.
F. France, St. John's College.
C. L. Maltby, St. John's College.

1842. F. Morse, St. John's College.
E. W. Montagu, Caius College.
H. A. J. Munro, Trinity College.
C. Rothery, St. John's College.
1843. R. H. Cobbold, St. Peter's College.
G. Druce, St. Peter's College.
1844. W. G. Clark, Trinity College.
T. R. Kewley, Magdalen College.
1846. H. De Winton, Trinity College.
1849. Herb. Morse, Caius College.
1852. W. Chandless, Trinity College.
G. B. Morley, St. John's College.
1854. G. M. Campbell, Magdalen College.
W. Elliott, Magdalen College.
C. Carlon, Trinity College.
1855. J. T. Moore, St. John's College.
1856. E. L. Brown, Trinity College.
1858. E. C. Clark, Trinity College.
A. W. Potts, St. John's College.

III.—University Scholars, Medallists, Prizemen, &c.

OXFORD AND CAMBRIDGE.

1840. J. Bather, St. John's College, Cambridge. (Re-examined with Craven University Scholar.)
1841. H. A. J. Munro, Trinity College, Cambridge. (Craven University Scholar.)
G. Druce. St. Peter's College, Cambridge. (The Porson Prize.)
G. Nugee, Trinity College, Cambridge. (Latin Essay.)
1842. E. H. Gifford, St. John's College, Cambridge. (Pitt University Scholar.)
G. Druce, St. Peter's College, Cambridge. (2nd to Pitt Scholar.)

IV.—College Fellowships.

OXFORD AND CAMBRIDGE.

(** Tutors or Lecturers former or present, of their several Colleges.*)

1840. James Harris, Pembroke College, Oxford.
*Mynors Bright, Magdalen College, Cambridge.
*F. France, St. John's College, Cambridge.
*H. A. Marsh, Trinity College, Cambridge.
J. E. Welby, Magdalen College, Oxford.
*W. Thomson, Queen's College, Oxford. (Provost of Queen's College, now Lord Bishop of Gloucester and Bristol.)
1841. W. Green, Pembroke College, Oxford.
J. Bather, St. John's College, Cambridge.
*E. M. Cope, Trinity College, Cambridge.
*Edmund S. Foulkes, Jesus College, Oxford.
H. Thring, Magdalen College, Cambridge.
1842. *Hugh A. J. Munro, Trinity College, Cambridge.
1843. G. Druce, St. Peter's College, Cambridge.
Edwin H. Gifford, St. John's College, Cambridge.
1844. *W. G. Clark, Trinity College, Cambridge. (Public Orator.)
*W. B. T. Jones, Queen's College, Oxford.
1845. *Rob. E. Hughes, Magdalen College, Cambridge.
*James Riddell, Balliol College, Oxford.
1847. F. Chalker, Corpus Christi College, Oxford.
G. O. Morgan, Worcester College, Oxford.
1848. *J. E. B. Mayor, St. John's College, Cambridge.
1849. F. T. Colby, Exeter College, Oxford.
S. P. Denning, University College, Durham.
D. Melville, Principal of Hatfield Hall, Durham.
1850. T. C. Barker, Christchurch, Oxford.
W. Fellowes, Dulwich College.
1851. C. E. Jenkins, Magdalen College, Cambridge.
H. Parker, Oriel College, Oxford.
W. B. T. Jones, University College, Oxford.
G. O. Morgan, University College, Oxford.
1852. *J. W. Taylor, St. Peter's College, Cambridge.
H. C. A. Tayler, Trinity College, Cambridge.
1853. A. White, Magdalen College, Cambridge.
*F. Kewley, Jesus College, Oxford.
*R. Burn, Trinity College, Cambridge.
A. B. Rocke, Christchurch, Oxford.
1854. S. H. Burbury, St John's College, Cambridge.
G. P. M. Campbell, Magdalen College, Cambridge.
G. B. Morley, Catherine College, Cambridge.
1855. W. Elliott, Magdalen College, Cambridge.
*B. W. Horne, St. John's College, Cambridge.
H. Day, St. John's College, Cambridge.
W. Inge, Worcester College, Oxford.
1856. E. L. Brown, Trinity College, Cambridge.
1857. J. R. Lee, Magdalen College, Cambridge.

ANSWERS.

SHREWSBURY.

Rev. B. H. Kennedy.

1859. *Alexander W. Potts, St. John's College, Cambridge.
*W. Eccles Jones, Jesus College, Oxford.
1860. T. G. Vyvyan, Caius College, Cambridge.
*A. Holmes, St. John's College, Cambridge.
E. C. Clark, Trinity College, Cambridge.
*H. A. Morgan, Jesus College, Cambridge.

College Scholarships have not been carefully recorded. The number is considerable, about twice that of the Fellowships.

Five Indian Civil Service appointments have been gained by candidates from Shrewsbury school.

ADDITIONAL ANSWER respecting PROFITS of BOARDING HOUSES.

EXTRACT from a LETTER from the HEAD MASTER to the SECRETARY.

May 1, 1862.

WHEN I first had to make a return of profits for income tax 20 years ago, I went very minutely into the details of the question, and I came to the conclusion that by calculating a profit of 25*l.* on each boarder paying the full charges, supposing the number to be from 60 to 70, I should make an equitable return. Since that time the prices of food and coals and the wages of servants have risen considerably, especially during the last ten years; and I am now of opinion that the profit on each boarder out of 60 cannot be safely put at more than 21*l.* I have, however, continued to state it at 25*l.*, and I am willing to state my average profits from boarders for ten years past at 1,500*l.* per annum.

Entrance fees add to this from 100*l.* to 150*l.* Balance of tuition fees 100*l.* My salary is 465*l.*

School houses are free of rent, taxes, and rates.

The second master, who has six boarders, requests me to state that he estimates his profits on each at 21*l.* a year.

I believe I have now given all the information desired, as nearly as it can be supplied. It must be remembered that many things are variable from year to year; and that the present statement supposes 100 paying boys of whom 64 are boarders.

(Signed) BENJ. H. KENNEDY.

* Numbers are here required for two purposes, 1st, that of avoiding any personal identification, such as would result from the use of the name ; 2nd, that of confining the particulars contained in the succeeding columns to the same individual boy. Therefore the number does not indicate the position in the form, or part of form, which each boy holds.

† The letters K.S. indicate that the boy is a King's Scholar.

DIVISION VI. Mr. Wolley. Fifth Form. Middle and Lower Divisions. 44 Boys. Middle Division. Lower Remove.	1	15 6	Sept. 1861	Sept. 1859	Remove.	—	No "absence" is mentioned of less duration than one month. After measles or any other infectious illness leave of absence for a fortnight is granted. Many boys have been absent from this cause, or from the death of relations, for two or more weeks at a time.

ETON.

DIVISION XVII. Mr. Cornish.
Fourth Form (Lower Remove). 48 Boys.

No.	Age.	Date of Entrance into Form or Division.	Date of Admission into School.	Form or Division of Form in which placed on his Admission into School.	Length of any protracted Absence since Admission into School.	Observations by Master making Return.
	Yrs. Mths.					
1	13 11	4 June 1861	June 1806	3rd Form (3).	—	These boys, as the return shows, are mostly those who came at the beginning of the Michaelmas school time 1861. They are kept together in the lowest division for convenience of arrangement till after the Christmas holidays; after which time they will be removed into their proper divisions. The work done by them in this division is the same as that done in the three other 4th Form divisions.

Dec. 1861.

FOURTH FORM, SENIOR DIVISION, 27 BOYS.

No.	Age.	Date of Entrance into Form or Division.	Date of Admission into School.	Form or Division of Form in which placed on his Admission into School.	Length of any protracted Absence since Admission into School.	Observations by Master making Return.
	Yrs. Mths.					
1*	16 5	Sept. 1861	Sept. 1861	4th, Sen. Div. - -	—	There is one observation common to all boys above 12, I might almost say above 11, in the accompanying return, viz., that, unless they have been prevented by ill-health, as children, which does not ordinarily come within a master's knowledge, they might have been much above their present position. Some are duller than others, some have been very delicate as children, but, perhaps, with one or two exceptions, there has been neglect or deficiency of early training, *where*, whether at home or school, it is out of my power to say. A boy well trained, whether at home or school, soon gets out of the 4th Form. Generally speaking the boys are *too old* for their place in the school. It is hard work, if indeed it is done, to keep them from being idle and mischievous; some, and at the present moment I believe *far the larger number*, are industrious and sensible. Nevertheless, it is hard to say where up to a certain age, old neglected boys can go better than to a public school. At the same time the school does them more good than they do the school.

N.B.—As the Classical, Mathematical, and French divisions are different, it has been considered most convenient to give *one* number to *each boy*, and to retain *the same*, through all the divisions, for the purpose of reference.

* F. indicates that the boy is a foundation scholar; C. that he is a commoner.

	114 C.	9 8	„	„			
	115 C.	10 10	Nov. 1861	Nov. 1861			
	116 F.	There is a *vacancy* at present among the Foundation Scholars. The boy has been nominated, but not *formally admitted.*					
Upper Mathematical School, First Division, 15 Boys.							For Mathematics the school is divided into 7 classes, as follows :— Upper Mathematical School, 1st division, 2nd division, 3rd division. Middle Mathematical School, 1st division, 2nd division. Lower Mathematical School, 1st division, 2nd division. In the lower division the subjects taught are, primary rules of arithmetic, and definitions of Euclid. Middle School—Arithmetic to Decimal Fractions Euclid, 1st book. Upper School, 3rd division, arithmetic, algebra, 2 books of Euclid; 2nd division, arithmetic, algebra, 4 books of Euclid; 1st division, higher subjects according to the progress made by each boy.
	1 F.	18 5	June 1857	Mar. 1857	2nd Div., Middle

42	19 4	,,	Aug. 1856	Upper Remove - -	- - -	2	2

* The age, in every case, is given to December 1861.

† Wherever Nat. Phil. is put, it indicates that the boy learns Natural Philosophy; where a number, it indicates that the learns modern languages, and that he is placed in the set denoted by the number.

‡ The letter F. denotes that the boy is a Foundationer.

§ In these tables, Lower Middle First Division corresponds to what is now called Upper Middle Third Division; and Lower Middle Second Division to what is now called Lower Middle. The names of these forms are often changed.

Note.—In consequence of the inequality of the boys in classical work, I divide the Form this half-year (October, 1861,) into two divisions ; viz., Upper Remove and Lower Remove. In classical work, these Forms are heard alternately. In divinity, history, &c., where they are all nearly on a par, they are all heard together. In consequence of the above alteration, the Form which was previously called the Lower Remove, is now the Fourth.

* Each of these boys was placed at first on a Form above that stated, and, being found unequal to it, was afterwards put down.

† The First Form is empty just at present.

TABLE B b.

RUGBY.

General Arrangement of Rugby School for teaching Modern Languages.

I. Sixth Form - - - - - divided into 2 Sets.

II. Upper School, consisting of Twenty, Fifth, and Two Second Fifths - - - - - „ 5 Sets.

III. Middle School, Upper Division, consisting of two Divisions of Upper Middle I. and Upper Middle II. - - - - - - „ 5 Sets.

IV. Middle School, Lower Division, consisting of Upper Middle III. and Two Divisions of Lower Middle - - - - - - „ 3 Sets.

V. Lower School, consisting of two Removes, Fourth, Third, Second - - - - „ 4 Sets.

Making a total of 19 sets, none exceeding 30 in number, and averaging 22-23.

These are taught by four masters, of whom two are engaged solely in teaching modern languages.

Rev. P. Bowden Smith takes	-	8 Sets.
G. Vecqueray, Esq.	„ -	8 „
Rev. C. E. Moberly	„ -	2 „
Rev. C. T. Arnold	„ -	1 „

Each set has two lessons a week, and all lessons are prepared out of school.

All boys must learn either modern languages or natural philosophy; at the present time about 425 are learning modern languages, and 40 natural philosophy (the latter chiefly in the 6th or Upper School); 4 boys are learning both.

French and German are taught throughout I. and II., and in the Upper Sets of III., IV., and V.; French only, in the Lower Sets of III., IV., and V.

To render this possible, boys who are very backward in either subject, or both, are required to have private tuition till their knowledge of modern languages is more on a level with their classical work.

During the present half-year, 16 boys have had such private tuition for the whole half-year, and 24 for a quarter.

Supplementary Table (B b.) for Rugby School as arranged for Modern Languages and Mathematics.

R. B. Mayor.	8	6th	26	16 8	Aug. 1858	Oct. 1861	
The Euclid through the school is taught for the most part on a black board. A boy is put on in a proposition, questions are asked and the different steps explained; deductions and problems are then worked out. In the Middle School places are taken as in form. Occasionally, while an examination paper is given to the set, each boy is called up and heard singly. In arithmetic, algebra, and the higher subjects, new rules are explained, and examples worked out on the board. The work done by each boy both in and out of school is looked over by the master, and difficulties are explained. Papers are given every two or three weeks.							
Sixth Form, 2nd Set, 10 Boys.	1	6th	6	18 7	Oct. 1856	Oct. 1861	Euclid; Beasley's Trigonometry; Todhunter's Algebra; Colenso's Algebra.

Manner of teaching:

1. Chemistry. Lectures are given, illustrated by experiments and diagrams, following generally the arrangement of the text book; and during the lecture *vivâ voce* questions are constantly put to secure that the experiments shall be properly understood. Notes are taken, and reports, written out of school, with sketches of all the apparatus used, are shown up weekly or fortnightly, corrected, and returned. Every four weeks a paper is set on the previous seven lectures; and all who can obtain 75 per cent. on the aggregate of the marks given to these papers receive prizes. Weekly and quarterly marks are given for the note books and the papers.

2. Electricity. In this subject note books are not required, and a more accurate acquaintance with a certain assigned portion of the text book is therefore expected.

3. This course is occasionally interrupted by a lecture on some other subject of special interest, *e.g.*, Spectrum Analysis.

* An exceptional case. The Lower School is not generally admitted to the Natural Philosophy Class.

TABLE C.

SHOWING

1, 2. The authors or books, whether books of reference or others, used in each division.

3. The authors construed or translated *vivâ voce*, and the quantity of each within a given period.

4. The method of hearing such construing or translating lessons.

5, 6. The authors whose language and whose substance respectively have been committed to memory, and the quantity of each within the same period.

7. The kinds and quantities, so far as they can be given, of composition done during the same period.

8. Other subjects of instruction forming part of the work of the division, and taught either by lectures, demonstration, experiment, or observation, with the amount of time devoted to each during the same period.

9. The methods employed to test individual proficiency in such other subjects.

TABLE C.—ETON.

ETON - - - - - - - -

	1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of Hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory and the Quantity of each in the same Year.
Division I., Sixth Form and Part of Upper Fifth, 32 Boys. Number of Boys from the Division who have left the School during the same Year, 27.	Greek Testament, *Wordsworth, Benton, Alford, Oxford;* Homer, *Oxford, Rothe;* Cicero, *Matthiæ Selection, Leipzig*, 1849; Tacitus, *The Leipzig Classics;* Euripides, *Badham;* Æschylus, *Paley, Blomfield, Klausen, Peile;* Lucretius, *Bernays;* Virgil, *Conington, Heyne;* Thucydides, *Arnold's;* Demosthenes, *Penrose's;* Horace, *Orellius;* Theocritus, *Eton Poetæ Græci.*	*Merivale's* Roman Empire, Decline and Fall of Roman Republic; Grote's and Thirlwall's Greece; Arnold's Rome; Hallam's Constitutional History (portions set for examination at the close of each school time); Smith's Dictionaries of Antiquities, Biography, or Geography.	Greek Testament, St. Paul's Epistles to Philippians; I. and II. Timothy, Hebrews, St. James' Epistles, St. Peter's I. and II.; Homer, Odyssey, Lib. XVII., v. 461, to XXIII., v. 168; Cicero's Epistles, Matthiæ Selection, Ep. 77 to Ep. 148; Tacitus, Annals, Lib. IV., c. xl. to end; Euripides, Ion, from v. 811 to end; Æschylus, Agamemnon, the whole play; Lucretius, selections, p. Lib. I., III., V.; Virgil. Georg., I., II.; Thucydides, Lib. III. c. xviii. to end; Demosthenes adversus Zenotherium et adv. Apaterium; Horace, Sat., II., ii., 126, to Ep. II., ii., 204; Ode, Lib. IV., Epodes 1-7; Theocritus, Idyll VIII., v. 54 to end; Idylls X., XI., XIII., XV., XVIII., XIX.	Each boy as he is called up reads over in the original language the passage which he is about to translate, he then construes it word for word. Remarks are made upon the passage, questions asked upon the history, geography, and antiquities, in illustration of the passage. The construction, where required, illustrated and explained. The boy then reads the passage off in English.	All the poetry which is construed excepting the Greek play is said by heart; only about 50 lines per week of the Greek play, and about 40 lines of Latin elegiacs, which have not been construed in school.	None.
Division II., Part of Upper Fifth Form, 32 Boys. Number of Boys from the Division who have left the School during the same Year (no account kept).	Homer's Odyssey, *Oxford edition;* Thucydides, *Arnold;* Æschylus, Agamemnon, *Paley;* Demosthenes, *Penrose;* Lucretius, Lib. III. and Lib. V.; Cicero's Letters, *Mathiæ;* Horace (generally *Orellius*); Virgil, mostly *Conington;* Theocritus (*Poetæ Græci*); Ovid's Fasti, *Paley;* Greek Testament, principally *Wordsworth's edition;* Hallam, Merivale.	Eton Greek Grammar; Jelf's Appendix; Smith's Classical Dictionary; Ainsworth's maps or Keith Johnstone's; Poetæ Scenci Græci; Grote's History of Greece; Merivale's Roman Republic.	Odyssey, 325th line of Σ to 355th line of Ω; Thucydides, 3rd Book, 56th ch. to end; Æsch., whole of Agamemnon; Demosth., Speeches against Zenotherius Apaturius Phormis Lacritus; 280 lines of 3rd Book of Lucretius, 55 lines of 5th Book; Cicero, 124 Letter to end of 158; Horace, 2nd Book of Sat. VIII. to Ars Poetica; 4th Book of Odes; Virgil, Eclogues; Theocritus, two Idylls, Lib. I. to 400th line of Lib. II.; Greek Test., Epistle to Hebrews; Epistle of St. James.	About four or six boys called up each school time, the whole lesson is construed through and often reconstrued or translated *vivâ voce;* questions put in history, geography, grammar, mythology, &c.; places not changed. There are three construing school times, on Monday, Wednesday, and Friday, therefore the number of boys called up each whole school day amounts either to 12 or 18, sometimes more, sometimes less.	100 lines of Homer weekly; 70 lines of Horace weekly; 36 lines of Theocritus occasionally; 40 lines of Ovid's Fasti weekly; 70 lines of Virgil or Lucretius weekly; 60 lines of Greek play weekly; 40 lines of Demosthenes occasionally.	It is impossible to state with accuracy the amount of matter committed to memory in the course of a year. In my division the boys repeat 80 lines of Homer per week; 70 lines of Horace; 40 lines of Ovid; 50 lines of Greek play; 40 lines of Greek or Latin prose.
Divisions III., IV., V., VI., VII., VIII., IX., including the whole of the Fifth Form except that part of the Upper Fifth comprised in Divisions I., II., about 300 Boys. Number of Boys from the Division who have left the School during the same Year (no account kept).	Homer's Iliad; Virgil's Æneid; Horace; Greek extracts in prose; Greek extracts in poetry; Latin extracts in prose; in the Greek Testament the Acts of the Apostles. The choice of editions to be used is not defined.	None are specified unless when a particular volume or subject is to be prepared for the collections, but the boys have access to an excellent public library.	Homer, first four Books; Virgil, Books V. and VI.; Horace, nearly the whole of the Satires and Epistles, and B. II. and Part III. of the Odes (which in the Summer months are substituted for Virgil); Herodotus and Thucydides, about 60 pages of the Extracts; Theocritus, in the Poetæ, about 20 pages; Livy, in the Latin Extracts, about 70 pages.	They are (commonly) called up singly to construe and parse, errors or questions unanswered being passed down to the rest. Sometimes it is found useful to allow them to take places accordingly, sometimes to arrange a first class of the best; but these modes have been less used since the establishment of the system of collections in every last week.	All the Homer, Virgil, and Horace, and Poetæ Græci mentioned in column 3; also Ovid (in the Eton Extracts); also lessons of Greek syntax, with occasional lessons from the Livy (or Cicero) Extracts.	Some history was set for the collections at the end of each school time, but I have no memoranda of the subjects specified; as an instance, I can give the last piece set (in this December), it was Arnold's History, chapters xxi., xliv., xlv.

ETON.—TABLE C.

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Divisions X., XI., XII., XIII. The Remove. About 160 Boys. Number of Boys from these Divisions who have left the School during the same Year (no account kept).	(*a.*) Greek Testament, no special edition prescribed; (*b.*) Horace, no special edition prescribed; (*c.*) Virgil, no special edition prescribed; Poetæ Græci, pars 1, *Eton edition*; (*d.*) Scriptores Græci, *Eton edition*; Cornelius Nepos, *Eton edition*; Electa Ex Ovidio, *Eton edition*. These portions only are read in the Remove,— (*a.*) The Gospel of St. Mark. (*b.*) Odes, and Epodes 1 and 2. (*c.*) Æneid, Books I., II., III. (*d.*) All the extracts from Xenophon except the Anabasis.	The Bible; Eton Greek Grammar; (*a.*) Eton Atlas; Eton Compendium of Geography (Arrowsmith); Outlines of Astronomy, Society for Promoting Christian Knowledge; (*b.*) Smith's School History of Greece. Large wall maps Kieppert, Johnstone, Sydow, are provided by some of the Masters at their own expense. (*a.*) The ancient Maps only are done in the Remove. (*b.*) The portion called "the Macedonian Period" only done in the Remove. (*c.*) The "Student's Manual of Ancient Geography," edited by Dr. Smith, is now (June 1862) substituted for the Eton Compendium by Arrowsmith.	St. Mark's Gospel; Poetæ Græci, about 1,280 lines; Scriptores Græci, about 800 lines; Cornelius Nepos, about 800 lines; Virgil, about 1,100 lines; Horace, about 512 stanzas. *Quantity done weekly.* St. Mark's Gospel, about 16 verses; Poetæ Græci, about 40 lines; Scriptores Græci, about 25 lines; Cornelius Nepos, about 25 lines; Virgil, sometimes 40 lines, sometimes 25 lines; Horace, about 16 stanzas. [According to the present arrangement (1862) the weekly quantity of Virgil is 30 lines; Cornelius Nepos, 50 lines.]	Call up one boy at a time, by selection, to construe, parse, and explain historical, mythological, geographical, and antiquarian allusions. All errors passed down and places taken accordingly. Observations and explanations made by the Master. About 6 boys called up each lesson on the average.	Poetæ Græci, about 1,280 lines; Virgil, about 1,100 lines (1862, 960 lines); Horace, about 512 stanzas; (*a.*) Short Ovid about 700 lines. Each Master is at liberty to set a piece of Milton to be learnt by heart in "Collections." (*a.*) 20 lines a week in Lower Remove; 24 lines a week in Upper Remove.	Eton Compendium of Geography; Smith's History of Greece to the Macedonian Period; Outlines of Astronomy. All the more important matter in each volume. *See* note (*c.*) in column 2.
Divisions XIV., XV., XVI., XVII. 4th Form. About 160 Boys. Number of Boys from these Divisions who have left the School during the same Year (no account kept.)	Farnaby Epigrams, *Eton edition*; Greek Testament, *Oxford text*; Æsop's Fables, *Eton edition*; Greek Grammar, *Eton edition*; Ovid Selections, *Eton edition*; Ovid Metamorphoses, Selections, *Eton edition*; Cæsar, *Eton edition*; Smith's History of Greece; Schmidt's History of Rome; Gleig's History of England; Arnold's Latin Composition, Part I.; Arnold's Greek Composition, Part I.	Liddell and Scott; various Latin Dictionaries; various Gradus ad Parnassum.	Farnaby, about 432 lines; Æsop, about 964 lines; Ovid E., about 720 lines; Ovid Metam. about 650 lines; Greek Test., St. Matthew's Gospel, 20 chapters; Cæsar, about 660 lines.	Call up any boy to construe, explain allusions and parse. Questions passed down, and places taken. Written derivations exacted for Greek lessons. Written account of proper names in Ovid lessons. From 7 to 10 boys called up in the whole lesson. The Master explains and illustrates all needful matter.	Ovid Electa (the same amount as construed in school); Ovid Metamorphoses, by Middle and Lower Fourth (the same amount as construed in school); Farnaby, by Upper Fourth (the same amount as construed in school); Greek Grammar, the Accidence (some parts of it two or three times over).	None.
Lower School.	Greek Testament; Excerpta Græca; Palestra Latina; Ovidii Electa; Wilkins' Delectus or Hutton's Principia Tirocinium; Greek and Latin Grammar; Clyde's Geography; Hume's (Student's) England; Bradley's Latin Exercises.	None.	The following is the average of each lesson:—8 verses of Greek Testament; 8 lines of Excerpta Græca; 18 lines of Ovid and Palestra Latina in the upper divisions; in the other divisions the amount is proportioned to their powers.	Four, five, or six boys are called up together; each boy in the division is required to hold up his hand if he can answer the question given, or correct a fault, and places are taken according to proficiency. By this means the attention of the whole division is arrested, and at least one-half of the whole division is called up each schooltime. Questions are given, arising out of the lesson, either in history, geography, or construction of sentences. In the composition lessons each master is continually moving among the boys, stimulating work, and removing difficulties which may arise. The work done in each composition lesson is finally looked over at the next school time.	18 lines of Ovid, and certain portions of grammar are said by heart on two mornings by each of the first two divisions; the other divisions repeat in proportion to their ability.	None.

TABLE C.—ETON.

7. The Kinds and Quantities* (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
	ORIGINAL.					
	English.	Latin.	Greek.	Modern Foreign.	None.	None.
rse.	None.	32 copies of elegiacs, 480 lines the minimum (14 for Lower Remove, 16 for Upper Remove, weekly). [1862, 21 copies; min., 316 lines.] 8 copies of lyrics, alcaics or sapphics, 28 stanzas the minimum (3 for the Lower Remove, 4 for the Upper Remove each copy). [1862, 11 copies, min., 39 stanzas.]	None.	None.		
ose.	None. (Except by way of answering questions, examination papers, &c.).	26 themes, 390 lines the minimum, (14 for Lower Remove, 16 for Upper Remove, each copy.) [1862, 21 copies, min., 316 lines.]	None.	None.		
	TRANSLATION.

	12 verses. 2 exercises either set by the Lower Master for his division, or from Bradley for the lower division. (These are independent of the composition done in school). A translation is done most weeks by the lower forms, occasionally by the higher.					

* The minimum quantities are here given. In the original exercises most boys show up about 20 lines, and the more painstaking from 24 to 30 or upwards, and in lyrics sometimes as many as 8 or 10 stanzas.

WINCHESTER.—TABLE C.

WINCHESTER - - - - - -

	1. Authors or Books used (not being mere Books of Reference). with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Sixth Form, Upper Division, 22 Boys. The Head Master. Number of Boys from the Division who have left the School during the same Year. *No return.*	Horace, *Orelli, Macleane;* Virgil, *Conington, Hayne,* and others; Livy, *Twiss;* Cicero de Oratore, *Harless, Greenwood,* and others; Juvenal, *Mayor, Macleane;* Thucydides, *Arnold;* Sophocles, *Linwood;* Pindar, *Donaldson;* Greek Testament, *Wordsworth, Trollope, Alford, Blomfield;* Salmon's Conic Sections; Hurtlee's Conic Sections; Snowball's Trigonometry; Todhunter's Trigonometry; Wood's Algebra (*Lund's* edition); Colenso's Algebra; Colenso's Arithmetic; Barnard Smith's Arithmetic.	Smith's Classical Dictionary; Smith's Dictionary of Antiquities; Smith's Latin Dictionary; Andrew's Latin Dictionary; Liddell and Scott's Lexicon; Keith Johnston's Atlas; Bütman's Lexilogus; Wordsworth's Greek Grammar; Jelf's Greek Grammar.	Horace, Odes, 2 books; Horace, Epistles Virgil, Eclogues, Georgics; Livy, Book 23, nearly finished; Cicero de Oratore, Book I.; Juvenal, 15 Satires (except 3); Sophocles, 1 play; Pindar, Olympian Odes; 2 Gospels.	Set on one boy after another, by selection, to construe. Ask questions of all sorts, either of the boy who is construing or any other. In an hour about 8 or 10 boys are usually set on. No places taken.	About 300 lines of Sophocles.	None.
Sixth Form, Junior Division, 19 Boys. Mr. C. Griffith. Number of Boys from the Division who have left the School during the same Year. Three.	Thucydides, *Arnold;* Homer (the Iliad), *Trollope;* Sophocles, *Linwood;* Virgil, Horace, *the Oxford Text;* Livy, *Twiss;* Juvenal, *Mayor.* Holden's "Foliorum Silvula," for translations into Latin verse (Hexameter, Elegiac, and Lyric); Holden's "Foliorum Centuriæ," for translation into Latin prose; Beatson's Introduction to Greek Iambic Verse; Arnold's Introduction to Greek Prose (Part I.) Smith's History of Greece.	Liddell and Scott's Greek Lexicon; Andrew's or Smith's Latin Dictionary; Smith's Dictionary of Antiquities (abridged): Riddle and Arnold's English-Latin Dictionary; Yonge's English-Greek Lexicon; Keith Johnston's Atlas; Butler's Atlas; Wordsworth's Greek Grammar; King Edward VIth's. Latin Grammar.	Thucydides, the 1st book; Homer, 5 books; Sophocles, 2 plays; Æneid, Books V., VI., and part of VII.; Horace, 2 books of the Odes, and the Epistles; Livy, Book II., III.	The boys are set on to construe indiscriminately, without reference to the order in which they sit; each, as he is set on, construes until he is told to stop, generally about 10 lines. Mistakes in translation are first corrected, and the sense of the passage explained where it is obscure. Questions are then asked upon any unusual forms or peculiar constructions which occur in the lines construed, and upon any allusions historical, mythological, geographical, &c. which require explanation. In illustration of grammatical peculiarities or other points, reference is made to parallel constructions or passages in the same author, or in others with which the boys are familiar. For the sake of enforcing accuracy, the first construe is made very literal, and with a view to idiomatic translation passages are selected to be read into English. Places are not taken in this part of the school. Those who do not know the lesson write it out.	Sophocles, about 750 lines.	None.

WINCHESTER.

TABLE C.—WINCHESTER.

7. The Kinds and Quantities (so far as they can be given) of Compositions done in the Form in the same Year.					8. Other Subjects of Instruction forming part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
	ORIGINAL.				None.	None.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	One or two copies of (say) 80 lines in all; besides the medal task.	40 to 50 copies; about 1,000 to 1,200 lines.	Hardly any.	None.		
Prose.	About half a dozen; about 400 lines; besides medal tasks; and an historical essay prize in the Christmas holidays.	30 to 40 copies; about 1,000 lines.	None.	None.		
	TRANSLATION.					
Verse.	None.	Say 8 long copies; 20 to 30 short ones; 400 to 500 lines.	From 20 to 30 copies; about 200 to 300 lines.	None.		
Prose.	None.	Say 10 to 20 copies; about 250 to 300 lines.	Very few.	None.		
	ORIGINAL.				A lecture on "Heat," from 11 to 12 on Saturdays during "cloister time." These lectures extend over the period from Easter to the Summer holidays, and are attended by the whole school.	None.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	A verse task of not less than 21 lines every week. These tasks consisted sometimes of original verses and sometimes of translations from "Foliorum Silvula;" most commonly of the former.	None.	None.		
Prose.	None.	A prose task of the like length each week. Of these prose tasks about half were translations (from Holden's Fol. Cent.), the rest were original compositions.	None.	None.		
	TRANSLATION.					
Verse.	None.	The total amount of composition done by each boy in the course of the year would thus be—Latin verse (Hex. and El.), 700 to 800 lines; Latin prose, 700 to 800 lines; Latin lyrics 300 to 400 lines.	An exercise of from 8 to 12 lines once a week except during the months of March, April, May, and June. In these months Latin lyric translations took the place of Greek verse.	None.		
Prose.	None.	Greek Iambics, 200 lines (omitting occasional short copies of verses written during school hours).	Two exercises from Arnold's Introduction to Greek Prose Composition, written in school once a week.	None.		

WINCHESTER.—TABLE C.

1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays, 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Fifth Form, Senior Division, 38 Boys. The Head Master. Number of Boys from the Form or Division of Form who have left the School during the same Year, *no return.*					
Virgil, *Anthon, Heyne, Delphin, Conington,* &c.; Horace, *Orelli, Macleane,* &c. ; Homer, *Trollope;* Sophocles, *Linwood;* Euripides, *Scholefield's Porson;* Arrian, *Donaldson's* extracts; Cicero, *Valpy's,* Select Orations ; Greek Grammar, *Wordsworth;* Greek Testament, *Lloyd, Wordsworth,* &c.; Juvenal, *Mayor, Macleane,* &c.	Smith's Dictionaries; Liddell and Scott's Lexicon ; Keith Johnston's Atlases.	Iliad, 1 to 4 books; Horace, 2 books, Odes, Epistles; Virgil, Eclogues, 2 Georgics ; Sophocles, Electra; Euripides, Phœnissæ; Arrian, say 40 pages; Cicero, 100 pages; Greek Testament, 2 Gospels; Juvenal, 15 Satires (3 excepted). (The Homer, Virgil, Horace, Juvenal, and Greek Testament are done in combination with upper Sixth Book, who construe the lessons before they are construed by the boys of this class.)	In the lessons of an hour each, about 12 boys are set on to construe. Questions are asked in all parts of the class, on any subject, directly or indirectly illustrative of the book. Places are freely taken and lost. The senior boys are most often set on. In the long lessons of Tuesday and Friday forenoons, besides all this, which then extends to an hour and a half, the boys are either taught the laws of Greek accents, or practised in composing Greek iambics, or some other such subject. On Friday mornings they finish the long 2½ hours lesson by exhibiting their MS. note books.	20 to 30 pages of Greek Grammar.	None.
Middle Part of Fifth Form, Senior Division, 31 Boys; Junior Division, 27 Boys. Rev. F. Wickham. Only recently divided. The Answers apply to both Divisions. Number of Boys from the Form or Division of Form who have left the School during the same Year. About 8, I should say, without any very accurate means of learning the Number. College Boys, *none.*					
Porson's Euripides; *Hickie's* Xenophon's Memorabilia; Valpy's school edition of Greek Testament; *Taylor's* Cicero's Offices and Treatises de "Amicitiâ" and "Senectute ;" Virgil, *Oxford pocket edition of;* Horace, *Oxford pocket edition of;* Homer, *Oxford pocket edition of;* Bishop Wordsworth's Greek Grammar; Dr. C. Wordsworth's Latin Grammar; *Oxford pocket edition of* Odyssey, used for 12 weeks in the year, between May and July. No Books with *Notes* are allowed at lesson time. *Books used in Mathematical Schools.* Pott's School Euclid; Colenso's Arithmetic ; Colenso's Algebra, part 1; Todhunter's Algebra; Todhunter's Trigonometry; used only by a few in this part of the school. *Books used in the French and German Schools.* *French.* Angoville's French Grammar ; Drames Français (Choix de), Manuel de Conversation ; Spier's French Dictionary, school edition ; Recueil Choisi, Wanostrocht. *German.* Tiarks' German Grammar; Tiarks' German Reader ; Tiarks' German Exercises; Flugel's Dictionary, school edition; Der Geisterseher (Schiller); Heinrich Von Eichenfels.	Liddell and Scott's Lexicon; Andrews' Latin Dictionary; Smith's Latin Dictionary ; Keith Johnston's and Bishop Butler's Ancient and Modern Atlas; Smith's Classical Dictionary; Smith's Dictionary of Antiquities; Yonge's English-Latin Dictionary; Stewart's Modern Geography; Gradus ad Parnassum.	Euripides Hecuba, l. 715 to end; Xenophon's Memorabilia, Book II., chapter 1; Greek Testament, St. Matthew, chapter 8 to verse 22 of chapter 12; Cicero de Senectute, chapter vii. to chapter xv.; Virgil, Æneid, 7th, 8th. and 9th, to line 160; Horace, 3rd book of Odes to Ode 24. *Observation.* It would be impossible for me to return the work done by the boys in the middle and junior parts of 5th form with anything like accuracy, so far back as the year ending July 1861, inasmuch as, owing to the increasing numbers of the school during the last 2 years, these classes have been in a constant state of alteration. The only intelligible return that I can make is to be reckoned from Sept. to Dec. 1861, but it is a fair sample of any year's school work for these classes. I have already observed (in another place, I believe) that they are to be subdivided again in Feb., with a new master to teach junior part 5th, in two divisions.	The whole division come and sit up "*at Books*" at the appointed hour. Frequently, before the lesson is construed, the last lesson in the author and some previous lessons are reconstrued. With the *parsing* and *questions* (historical, geographical, &c., &c.,) passed down the class, there becomes a very active movement in the way of "taking places." Many a good boy, who has been unfortunate enough to lose his 10 places for his deficiency in repeating his morning lines, finds his recovery thereby in the course of the next lesson. The position of each boy is marked in the "Classicus paper" at the end of every lesson. The marks also of the *German* and *French* masters, of the *Mathematical* master, of the *Maps*, and of the *Composition* (prepared under the College and Commoner tutors) are entered in the same way at the end of every week, whereby a great amount of emulation is caused amongst the boys. Every boy is obliged to bring up "to Books," his *Grammar* and *Dictionary* and *Atlas*, so as to be able to refer to them if needed. *Most* of the lessons are prepared in the hours of school time, and that under the eye of the master.	Euripides, 220 lines ; Cicero, 160 lines; Virgil, 925 lines; Horace, 3rd book of Odes, 9 Odes; Homer's Odyssey; Virgil's Georgics; take their place separately in the last term of the year, (*i.e.*, after Easter, called "Cloister" time. I cannot say too much of the advantage of the boys being obliged to devote one week at the end of Cloister time to the duties of what is called "standing up week." 1st lesson, Greek Grammar; 2nd, mathematics ; 3rd, 4th, 5th, 6th, 7th, 8th, repetition in classic verse or prose authors, that he may have been enabled to store up in his mind during the year, or at any former time.	None, if I understand the question rightly.

Observation.—The "composition" of the school is prepared by the college and commoner

TABLE C.—WINCHESTER.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such other Subjects.
ORIGINAL.						
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	Say 6 copies, about 200 lines.	Say 40 long copies, about 800 lines; 60 short ones, about 360 lines; besides the Maltby prize task.	None.	None.	None, except three quarters of an hour on Saturdays in Geography.	None.
Prose.	Say 5 copies, about 150 lines.	About 20 copies, about 500 lines.	None.	None.		
TRANSLATION.						
Verse.	Very rarely.	About 15 copies, about 300 lines.	None.	None.		
Prose.	None.	About 30 copies, about 500 lines.	None.	None.		
ORIGINAL.						
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	Occasionally, instead of the weekly Latin V. task.	*Per Week.*—3 short exercises called "Vulgus" of 6 lines; 1 task not *less* than 14 lines, 20 lines *the average, sent* in to me.	Occasionally 10 nonsense Iambics instead of a "Vulgus."	None, I believe.	*None*, that come under me. During the last 12 weeks of the Wiccamical year (ending in July) there has been instituted for the *last few years* a Saturday lecture in some scientific department, of *one hour*, at which the whole school are required to attend.	*None*, so far as I believe, other than that the Headmaster, Dr. Moberly, instituted an annual prize, at his own expense, for the pursuit of *botany* open to the whole school, two or three years ago. I cannot tell you how *thoroughly* and *universally* this encouragement has laid hold on the boys. I seldom "call names" on their return to college, from "hills" or else where, without seeing a large number of them, each with a handful of wild flowers. Emulation, therefore, in *this department* is quite evident, though I have not the means of returning it in *any other*, under the above Table.
Prose.	None.	Occasionally.	None.	*Two* exercises, I believe, either in German or French weekly.		
TRANSLATION.						
Verse.	None.	In place of the weekly task, a passage from some English poet is given *occasionally* for translation.	None.	None, I believe.		
Prose.	None.	A weekly task of about 16 lines either from some English author or from Yonge's Translation Exercise Book.	None.	*Two* exercises, I believe, either in German or French weekly.		

tutors, and sent in for the head and second masters' reading on the appointed days.

WINCHESTER.—TABLE C.

Junior Part of Fifth Form, not yet divided, 23 Boys. Mr. F. Wickham.
Number of Boys from the Form or Division of Form who have left the School during the same Year. I cannot tell how many commoners have left (say 3), of College, *none*.

1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays, 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Ferguson's Xenophon's Anabasis, Books I., II.; Valpy's School Greek Testament; *Eton* Cornelius Nepos; Horace, *Oxford pocket edition*; Virgil, *Oxford pocket edition*; *Parker's* Ovid, Fasti; Bishop Wordsworth's Greek Grammar; Dr. C. Wordsworth's Latin Grammar. *Mathematical School.* Colenso's Arithmetic; Colenso's Algebra. No books with "*notes*" are allowed at lesson time.	Liddell and Scott's Lexicon; Andrews' Latin Dictionary; Smith's Latin Dictionary; Smith's Classical Dictionary; Smith's Dictionary of Antiquities; Yonge's English Latin Dictionary; Keith Johnston's and Bishop Butler's Atlas; Stewart's Modern Geography, school edition; Gradus.	Xenophon's Anabasis, l. I., chapters ix. and x.; Greek Testament, St. Matt., chap. viii. to verse 22 of chapter xii.; Cornelius Nepos; Hamilcar and Hannibal, nearly; Horace, 20 Odes, 3rd Book; Virgil, Æneid, Lib. VII. and part of VIII. Ovid's Fasti comes in at a different period of the year called "Easter Time."	The whole division come and sit 'up' "at books" at the appointed hour. Frequently, before *the* lesson is construed, the last lesson in the author and some previous lessons are reconstrued. With the parsing and the questions (historical, geographical, &c. &c.)	Virgil, 730 lines; Horace, 230, "As in præsenti"; Cornelius Nepos, occasionally, instead.	None. If I understand the meaning of the question.

Books used in the French and German Schools.

French.	*German.*
Angoville's French Grammar; Drames Français (Choix de); Manuel de Conversation; Spier's French Dictionary, school edition; Recueil Choisi, Wanostrocht.	Tiarks' German Grammar; Tiarks' German Reader; Tiarks' German Exercises; Flugel's Dictionary, school edition; Der Geisterseher (Schiller); Henrich von Eichenfels.

Observations.

The same as I have made in my other return of No. C. My "return" of work done, *must* be a *weekly* one *only*, between *September* 1861 and *December* 1861, as there can be no sure reckoning for an earlier date.

passed down the class, there becomes a general movement in the way of "taking places," thereby many a good boy, who has been unfortunate in his repetition lesson of the morning, and has lost 10 places, has the opportunity of recovering himself.
The position of each boy is marked in the "Classicus Paper" at the end of each lesson.
The marks, also, of the *German* and *French* masters, of the *Mathematical* master, of the *Maps*, and of the *Composition* (prepared under the College and Commoner tutors), are entered in the same way at the end of each week, whereby a great amount of emulation is caused amongst the boys.
Every boy is obliged to bring up "to books" his grammar and dictionary and atlas, so as to be able to refer to them, if needed.
Most of the lessons are prepared in the hours of school time, and *that* under the eye of the master.

Fourth Form, Senior Division, 27 Boys. Mr. H. E. Moberly.
Number of Boys from the Form or Division of Form who have left the School during the same Year, 3.

Greek Extracts, 7th edition; no editor named, Edinburgh, 1858; *Long's* Cæsar; *Arnold's* Eclogæ Ovidianæ; Virgil, *small Oxford edition*; Greek Grammar, by *Wordsworth*; Latin Grammar, King Edward VI., *Wordsworth*; Kings of England, *Miss Yonge*, till the small Student's Hume is published; and Annals of England, from which the facts of the most important years are written down from dictation for the period of history to be read. *4th Jun. Div.* Wilkins' Greek Delectus; Jacob's Latin Reader, Part II.; Arnold's Eclogæ Ovidianæ; grammar as above; history as above. Colenso's Algebra; Colenso's Arithmetic; Barnard Smith's Arithmetic, for both divisions. Ellis' Exercises; Penrose's Elegiacs; Bedford's Propria quæ Maribus or prosody; Payne's Readings in Poetry, for both divisions.	Liddell's Greek and English Lexicon, small edition; Smith's Latin Dictionary, small (intermediate) edition; Smith's smaller Dictionary of Antiquities; Keith Johnston's Ancient Atlas; Keith Johnston's Modern Atlas; Gradus, Cary's, Piper's, Yonge's, as the case may be. *4th Form, Jun. Div.* 10 boys. As above.	Greek, 12 or 15 lines; Latin, 20 lines; 35 pages in a year of the Greek extracts; 60 chapters of Cæsar in a year, and commonly selected passages, *e.g.*, B. I., c. i. to xxx., B. IV., c. xx. to xxxvii., &c. Virgil, 700 lines; Ovid, 1,400 to 1,500 lines. Virgil is often dropped for awhile according to the condition of the class. *4th Form, Jun. Div.* Greek, from 6 to 10 lines; Latin, from 10 to 16 lines. About 20 pages of Delectus; between 600 and 700 lines of Ovid; 20 pages of Latin Reader.	The whole division is called up; the senior division for an hour at a time, and the junior division for the same time. Sometimes 8 or 10 boys are called out singly one after the other to construe; sometimes every boy in the division construes a short piece. In neither case are they called upon in order. A short passage is read and then translated; words are parsed, explanations required of allusions, and all errors passed down the form and places taken accordingly. Now and then the boys are allowed to ask each other questions; but this does not seem to be a very serviceable practice, so low down in a school. The questions are not worth much; and time, which should be used in preparing lessons, is spent in hunting up some out-of-the-way fact, instead of what tests the use of such books as the boys have to prepare their work with. In repetition lessons 4 or 5 boys are called up at a time; taking places would, I think, be always desirable for such lessons in this part of the school; but the practice cannot be always carried out. "Standing up" would be more useful still, if it were more of an examination. Hearing the boys separately is more laborious than effective. A few papers with a smaller quantity learnt by heart would make, I believe, a valuable examination.	Ovid, 700 lines; Latin grammar; Greek grammar; English poetry; selections 700 lines. A peculiar custom exists at Winchester of hearing all the boys below the Senior part of the 5th, what is called "standing up." This consists of 8 lessons, said during the last week and a half of the summer half year. Each lesson consists of 150 lines for the senior division, and 100 for the junior (as a minimum), to be construed, &c., and said by heart. Each boy is heard separately. The standard is a line of Ovid or Virgil,—1 line of Latin prose =2; 1 of Greek verse = 2; 3 of Horace = 2; 2 of English = 1. No Greek prose is allowed in the 4th form. The Latin grammar and Greek grammar are required, and count as 4 lessons. The other 4 lessons are left to the option of the boys themselves, and almost invariably include the morning lines of the year.* The marks for the standing up are added to those of the half year, and the form arranged according to the joint result.	Bedford's Propria quæ Maribus and Prosody—a short elementary book, which is more useful than the corresponding portions of Edward 6th's Latin Grammar, the language of which, however, is required, as well as the substance and matter.

* Only one lesson of English verse is allowed; also one lesson of Euclid is allowed.

TABLE C.—WINCHESTER.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."

Verse.	None.	About 70 copies a year from Penrose's Introduction to Elegiac verse, the minimum required being 16 a week; the best boys doing on an average from 30 to 40 a week.	None.	None.		
Prose.	None.	About 70 exercises a year, 35 from Ellis' Latin Exercises, 20 lines; 35 from Collis Ponticulus Latinus, 10 to 12 lines.	None.	1 French exercise a week, from Angoville's French grammar.		

WESTMINSTER.—TABLE C.

WESTMINSTER - - - - -

1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Sixth Form, 21 Boys. The Head Master. Number of Boys from the Division who have left the School during the same Year, 13.					
Plautus Trinummus (*Westminster edition*); *Dindorf's* Demosthenes; *Orellius'* Horace; *Hermann's*, *Linwood's*, and *Dindorf's* Sophocles; *Stallbaum's* and *Bekker's* Plato; *Raschig's* Livy; Alford's Greek Testament; Davison on Prophecy; Hallam's Constit. History; Liddell's Roman History; Euclid; Colenso's Algebra; Todhunter's Trigonometry (and other books); French Grammar; Delille; Prose Auteurs, Roche; Poètes. In Mathematics and French the books have varied according to the proficiency of the boys.	Smith's Dictionary of Antiquities; Smith's Biographical Dictionary; Liddell and Scott's Lexicon; Scheller's and Smith's Latin Dictionaries; Ruperti's Notes on Livy; Butler's and other Atlases; Donaldson's and other Grammars, and various other books from the libraries.	Demosthenes, Meidias, latter half; Androtion, all; Sophocles, Œd. Colon.; Livy, book ix.; Horace, Satires, book ii. 3 to end; Epistles, book i. and ii.; Plato Apologia; Plautus Trinummus; Greek Testament, ii. Corinth; i. Peter; Acts, ch. i.—xviii.	Each lesson begins with the translation of the piece done in the last lesson, read off into English: then a fresh piece is construed, the Greek or Latin words being taken with their rendering. About 8 boys on the average are called up in each lesson. Questions are asked as they suggest themselves, on points of construction, history, mythology, antiquities, &c. &c. Errors are passed on to other boys, but no places are taken. The French classes read and translate French into English, repeat French by heart, write it from dictation, and do weekly an exercise of translation from English into French.	Plautus, Trinummus (for representation); Soph. Œd. Colon. (iambics); Livy, book ix (speeches); Ovid, Ep. ex. Ponto, book i, and part of ii.; Greek Testament, text of ii. Corinthians, and 1st Peter. Certain boys have also learnt long passages of Virgil, Greek iambics (from plays previously read), and, in one case, of Shakespeare, the quantity varying from 200 to 1,000 lines. The Trinummus was the play acted at Christmas in the Dormitory.	All the books mentioned in column 3; also Hallam's Constitutional History, most of vol. i.; Liddell's Roman History, latter half; Davison's Discourses on Prophecy, i.-v.
Remove and Upper Shell Forms, 31 Boys. Mr. Marshall. Number of Boys from the Division who have left the School during the same Year, 8.					
Dr. Lloyd's Greek Testament; *Dindorf's* Sophocles; *Paley's* Euripides (*Camb. Text*); *Bekker's* Thucydides; Herodotus in "Historia Græca" (a book of selections for the school); *Dindorf's* Demosthenes; *Purton's* Cicero pro Milone; *Raschig's* Livy; Oxford Virgil; Plautus Trinummus, *Westminster edition* (*Ritschel's* text); Dr. Wordsworth's Greek Grammar. The rule is that the text only should be brought up to lessons; annotated editions are used in preparation. Euclid; Todhunter's Algebra; Colenso's Algebra; Todhunter's Trigonometry; Roche's Poètes; Macaulay's Essays for translation into French; Beleze's Exercises; Delille, Prose Auteurs.	Liddell and Scott's Greek-English Lexicon; Riddle and Arnold's English-Greek Lexicon; Smith's or Riddle's Latin-English Dictionary; Riddle and Arnold's English-Latin Lexicon; Liddell's History of Rome; Smith's History of Greece; Smith's Dictionary of Antiquities; Smith's Classical Dictionary; Butler's or Johnston's Atlas; Nugent's and other French Dictionaries. And many other larger works to which the boys have access in their libraries.	*Remove.* St. Luke, ten chapters translated from English into Greek; Sophocles Œdipus Coloneus; Euripides Iphigenia Taurica; Thucydides, l. ii. c. 65–79; Herodotus, l. i. c. 95–153; Demosthenes Leptines, section 1–101 (there are 167 sections in all); Cicero pro Milone; Livy, l. ii. c. 1–52; Plautus Trinummus; Horace Odes, book ii.; Virgil Georgic, iv. *Upper Shell.* St. Luke, ten chapters, as above; Euripides Hecuba; Medea; Herodotus, l. i. 95–150; Demosthenes Leptines, section 1–54; Cicero pro Milone, c. 1–28; Livy, l. ii. 1–51; Plautus Trinummus; Horace Odes, book ii.; Virgil Georgic, iv.	The ordinary course is first to go over the old lesson. The manner of doing this is varied according to circumstances. Sometimes the passage is construed: more frequently read into English. Sometimes the books are shut, and the boys are questioned on the subject-matter, allusions, language, and English, being a direct or more or less altered translation of passages occurring, is given by the master to be re-translated *vivâ voce*. Sometimes the dificult passages only are construed. A boy is selected to begin construing or answering questions, and afterwards all answer and construe in succession. Places are taken and questions incidental to the text are passed round independently of the rotation of construing. To insure proper learning of the new lesson by the under form, passages, phrases, and words are marked to be translated or explained on paper, and selected so as to compel thought and accuracy. This is done more or less according to the difficulty of the author, and the greater or less proficiency and industry of the form for the time being. Before the lesson begins each boy is allowed and encouraged to bring his difficulties to the master to be explained; and this permission is used to a very satisfactory extent, and is most used by the most intelligent and painstaking. The new lesson is always construed through, and questions are circulated as in the case of the old. I should think it would hardly ever happen that any boy missed construing in one of the two lessons. Attention is called to the structure of the language by requiring the boys to give examples from their own reading of all the rules in the Greek syntax. The English translation of the New Testament is read back into the original. As the time of examination approaches, the subjects are revised, considerable portions being taken at each lesson. At the end of the new lesson, or sometimes after both old and new lessons, "principes" are taken as in other forms. For exercises, repetition, and history, marks are given.	*Remove.* Holy Scripture, about 400 verses, chiefly from the Old Testament, in illustration of historical books read (*e. g.*, Psalms written on particular occasions in David's life); Horace's Odes, book ii.; Virgil Georgic iv.; Plautus Trinummus, about 750 lines; Sophocles Œdipus Coloneus, 111 lines; Euripides Iphigenia Taurica, 153 lines; Cicero pro Milone, 5 chapters; some other short passages of Latin prose and Greek verse; Syntax of Wordsworth's Greek Grammar, sense of the rules given in English, examples in the book, learned by heart, additional examples given from passages which boys have read themselves; about 550 lines of French Poetry. *Upper Shell.* Holy Scripture as above; Horace Odes, ii.; Virgil Georgic, iv.; Trinummus, 700 lines; Euripides Hecuba, 74 lines; Euripides Medea, 107 lines; Syntax (to the De Modis Verborum); Cicero pro Milone, &c., about four chapters; French, rather less than Remove.	St. Luke, ten chapters, with constant reference to other Gospels; Acts, c. i.–xx.; i. & ii. Samuel, i. & ii. Kings, i. & ii. Chronicles, with many illustrative passages (*see* col. 5): the portions mentioned in col, 3; Smith's History of Greece; considerable portions of the History of Rome in connexion with Livy, l. 2, and Cicero pro Milone.

WESTMINSTER.

TABLE C.—WESTMINSTER.

	7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year				8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same year.	9. Methods employed to test individual Proficiency in such "other Subjects."
	ORIGINAL.					
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	3 copies, about 90 lines.	16 copies, about 380 lines; 1 copy of 100—150 lines.	None.	None.	None.	None.
Prose.	2 copies, about 60 lines.	15 copies, about 320 lines; 1 copy of 100 lines.	None.	None.		
	TRANSLATION.					
Verse.	9 copies, about 270 lines; usually from a passage of some Greek or Latin Poet.	28 copies, about 600 lines. (Some of these done in "Composition Lecture.")	23 copies of iambics, about 360 lines; usually from Shakespeare.	None.		
Prose.	Occasional Themes.	24 copies, about 700 lines. (Some done in "Composition Lecture.") From Kennedy's "Palæstra Stili Latini."	16 copies, about 260 lines.	30 copies, about 400 lines, usually from Macaulay.		
	ORIGINAL.					
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	About 33 copies, 660 lines, Remove; 570 Upper Shell; one copy of 100 lines.	None.	None.	None.	None.
Prose.	None, except answers to Divinity and historical questions.	None.	None.	None.		
	TRANSLATION.					
Verse.	Two or three translations from Euripides or Sophocles.	About 36 copies, 360 and 216 lines from passages in English poetry.	None.	None.		
Prose.	About 12, from Greek and Latin authors.	About 38, generally from History of Greece or Rome. Yonge's Exercises often used for Upper Shell.	About 32, from Greek history, or from passages given on paper by the master.	About 32, from Macaulay or History of Rome, or from a French author into English.		

WESTMINSTER.—TABLE C.

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Under Shell and Upper 5th Forms, 27 Boys. Mr. James. Number of Boys from the Division who have left the School during the same year, 4.	Greek Testament (*Oxford*); Homer's Iliad (*Oxford*); Xenophon's Cyropædia (*Dindorf*); Xenophon's Anabasis (*Dindorf*); Virgil (*Oxford*); Cæsar (*Dymock*); Plautus (*Westminster.*) N.B.—The text alone is used at lesson; but other editions are allowed for preparation. Wordsworth's Greek Grammar; Smith's History of Greece; Chepmell's Course of History; Arnold's Greek Prose (part i.); Yonge's Exempla Majora; Walford's Latin Verse; Todhunter's Algebra; Bonnycastle's Arithmetic; Euclid. Exercises, par G. Beleze.	Liddell and Scott's Lexicon; Riddle or Smith's Latin Dictionary; Carey's Gradus; Smith's Classical Dictionary; Keith Johnston's and Butler's Atlases; Nugent's French Dictionary (*the abridged edition*).	Iliad, book viii. 300 to the end, ix. xi. to 285; Xenophon Cyropædia, books ii. c. 3., iii., iv. c. 2.; Virgil, Æneid, books vi. and viii.; Plautus Trinummus, 1, 2, 3, Acts; Cæsar de Bello Gallico, vi. c. 1 to c. 20., vii. c. 50. to c. 70; Greek Testament, St. Matthew, vii. to xx. In the upper fifth Form Xenophon's Anabasis instead of Cyropædia, book v. c. 5. to vi., c. 6.	Boys are called up to construe and then to parse by selection. The preceding lesson is construed again with the new, so that the greater number are tried on each occasion. Questions on history, geography, &c. are asked and explanations given when requisite, and at such times in the lesson as may appear most suitable. In the Greek Testament lesson the English is rendered into Greek. After hearing the new Cæsar lesson the master translates the last lesson and the boys render it orally into Latin. Errors are passed round the form and places are taken accordingly. Marks are given to the "principes" of each form in the proportion of one for every three boys. Thus in a form of 15, the head boy has 5, the second 4, and so downwards. As in several lessons both forms say together, boys are called up from each in such order as may secure the greatest amount of attention; but as regards places, the two forms are kept distinct.	Virgil's Æneid, 1,500 lines; Milton's Lycidas; Gray's Progress of Poetry.	Bible, — Numbers, Joshua, and Judges; Smith's History of Greece, pp. 1-264, omitting cc. 13, 14; Chepmell's History of England, pp. 132—215; Greek Grammar, pp. 1—142. Rules and Notes.
Under Fifth Form, 16 Boys. Mr. Andrews. Number of Boys from the Division who have left the School during the same Year, 3.	Greek Testament, Homer, Virgil, Xenophon, Cæsar, plain texts; Ovid Fasti (*Westminster edition*); Chepmell's Course of History; Wordsworth's Greek Grammar; King Edward 6th's Latin Grammar; Beleze, "Exercises de Mémoire et de Style;" Delille, Grammaire Française; Colenso's Arithmetic; Bonnycastle's do.; Yonge's Exempla Minora; Walford's Latin Verse; Arnold's Greek Prose (part i.)	Liddell and Scott's Lexicon; Riddle's Latin Dictionary (both abridged); Butler's Atlas; Carey's Gradus.	St. Matthew, chap. xii.–xxii., in the original; Homer's Iliad, about 700 lines; Virgil's Æneid, i., ii., and part of iii.; Xenophon's Anabasis, book i. and part of ii; Cæsar's Bellum Gallicum, book ii. and part of iii.; Ovid Fasti, about 700 lines.	Each boy called up (according to order of places or by selection) to construe in turn. Questions in parsing, syntax, historical and geographical allusions, passed down and places taken. Observations and explanations made by the master from time to time. Marks are given to the "Principes," as in the other forms. The preceding lesson is usually construed again with the new, and sometimes the new lesson is construed twice over.	Ovid Fasti, 14 lines per week; Virgil's Æneid, 28 lines per week; Gray's Progress of Poesy; Gray's Bard. The Gospel or (occasionally) the Epistle for each Sunday is repeated by heart on the following Monday.	Chepmell's History of England to the reign of Edward VI., and Rome to the Empire. Bible history, i. and ii. Samuel; i. and ii. Kings; Ezra; Nehemiah.

TABLE C.—WESTMINSTER.

Verse.	None.	Two copies per week (Walford), about 8 lines.	None.	None.		
Prose.	None.	Two copies per week (Yonge's Exempla Minora), about 10 sentences.	Two copies per week (Arnold's Introduction), 8 or 10 lines of English.	One copy per week, 12 lines.		

WESTMINSTER.—TABLE C.

	1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated, *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Upper Fourth Form, 14 Boys. Mr. Andrews. Number of Boys from the Division who have left the School during the same Year, 3.	Greek Testament; Cornelius Nepos, *Bradley;* Ovid Fasti, Greek Epigrams, *Westminster editions;* Edward 6th's Latin Grammar; Wordsworth's Greek do.; Chepmell's Course of History; Beleze's Exercises de Mémoire et de Style; Delille's French Grammar; Bonnycastle's Arithmetic; Colenso's do.; Bradley's Latin Exercises; Howard's Greek Exercises; Rapier's Latin Verse Book.	Liddell and Scott's Greek Lexicon (abridged); Riddle's Latin Dictionary; Carey's Gradus; Butler's Atlas.	Greek Testament, St. Matt. xii.-xxii. inclusive; Ovid, about 1,400 lines; Cornelius Nepos, Lives of Atticus, Eumenes, Pausanias, Hamilcar, Hannibal, Cimon; Greek Epigrams, about 700 lines.	Each boy is called upon to construe a short portion of the lesson, generally in order of standing, sometimes by selection; mistakes corrected and places taken accordingly. Questions in parsing and historical and geographical references passed down the form; "Principes" marked, as in the other forms. The preceding lesson is generally construed again with the new, and the latter sometimes construed twice over.	Ovid Fasti, about 1,000 lines; Gray's Progress of Poetry; Gray's Bard; the Gospel of each Sunday.	Chepmell's History of England; Bible history, Joshua, Judges, i. and ii. Kings, Ezra, and Nehemiah.
Under Fourth Form, 12 Boys. Mr. Bonney. Number of Boys from the Division who have left the School during the same Year, 1.	The Bible; Sinclair's Exposition of the Church Catechism; *Bradley's* Nepos, edited by *White;* Ovid Fasti, *Westminster edition;* Wilkins' Greek Delectus; Edward the 6th's Latin Grammar; Wordsworth's Greek do.; Chepmel's History; Neale's Geography; Latin Exercise; Exempla Minora (*Ellis*); Verses and Greek Exercises given by the Master.	Latin Dictionary, generally Smith's smaller Dictionary; Greek Lexicon, generally Liddell and Scott's smaller Lexicon; Gradus; Atlas, various.	Nepos; Ovid Fasti; Greek Delectus.	A boy is called up. Mistakes are passed on, and places taken. After he has done a certain portion, two or three lines, the first boy who took his place is set on; or if he has not lost his place, the boy next below him. When the lesson has been construed over two or three times, so that every boy has been up once at least, the principal words in it are parsed one by one, questions arising from them or the context of the lesson being also asked.	Ovid Fasti.	Bible; Sinclair's Catechism, Chepmell's History, Neale's Geography.
Under Fourth, Upper Third, and Under Third Forms, 27 Boys. Mr. Weare. Number of Boys from the Division who have left the School during the same Year, none.	Cornelius Nepos, *School edition;* Ovid's Fasti; Ovid's Metamorphoses; Æsop's Fables; Latin Delectus; Gospels (English); Archbishop Wake's Exposition of the Church Catechism, *abridged edition;* Archdeacon Sinclair's Questions on the Catechism; small School Geography; King Edward 6th's Latin Grammar; Wordsworth's Greek Grammar; Yonge's Latin Exercises; Ellis's Latin Exercises; Henry's First Latin Book; French Grammar (Rudiments).	Smith's Dictionary of Antiquities; School History of Greece, Rome, and England; Butler's and Keith's Johnston's Atlases. "Illustrations:" Of historical events and persons; by actual coins, Greek and Roman; and by engravings and sketches of principal places; of geography, geology, and astronomy, as far as possible by Keith's Johnston's Atlases.	Cornelius Nepos, five or six Lives; Ovid's Fasti, large portions of four first books; Ovid's Metamorphoses, large portions of two books; Æsop's Fables, five or six Fables; Latin Delectus, fifteen pages. N.B.—The Under 4th Form have only construed Cornelius Nepos with the Under Master.	Each form in succession. Each boy construes two or more lines, parsing them with rules. Questions on the history or geography, and explanations. The lesson always construed twice over; mistakes corrected by next boy; places taken; records kept of places at end of lesson; and the general result of such places taken into consideration at the special examination at the end of each Term, when the trial for removes to a higher form takes place.	Ovid's Fasti, short portions of. Latin Grammar, at least four times over in the year, to nearly end of Syntax. Greek Grammar, three or four times over, to end of verbs in ω. Archbishop Wake's Catechism, all *twice* over at least.	Cornelius Nepos, Ovid's Fasti, Ovid's Metamorphoses, Æsop, as in column 3.

The above Return is given for the Year ending at the ensuing Christmas Holidays,

TABLE C.—WESTMINSTER.

Verse.	*No return.*	The translation in English of a few easy Elegiac couplets are given to the form to be re-translated into Latin, and arranged. 4 to 6 lines are generally given at a lesson.	None.	None.		
Prose.	None.	The English, and sometimes the Latin words also, are given to be done into correct Latin. The lesson varies from 6 to 8 sentences.	Five or six easy short sentences, with the Greek words to put into the right cases, tenses, &c.	None.		
	ORIGINAL.				Perhaps 30 lectures or lessons in the year, of nearly an hour, on geography (physical and political), and the rudiments of geology and astronomy.	Questions at each succeeding lesson on subjects touched on in the preceding, and occasional Maps drawn, or *written* Exercises on such geographical, &c., Subjects.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	*No return.*	None.	None.		
Prose.	Every week an Exercise on a Chapter in the Gospels, recounting facts and explanations previously gone over with the Master, such Exercise generally of two or three octavo pages of MS.	None.	None.	None.		
	TRANSLATION.					
Verse.	Select portions of Ovid and others (if able).	Rapier's Verse Book, and English supplied off-hand for translation into Elegiacs.	None.	None.		
Prose.	Ovid's Fasti and Metamorphoses, portions of Æsop and Delectus.	Yonge's Exercises; Henry's First Latin Book; Ellis's Exercises.	None.	None.		

the present Master of the Form having only occupied his post since Christmas last.

CHARTERHOUSE.—TABLE C.

CHARTERHOUSE

Sixth, or Highest Form, from 12 to 13 Boys. Rev. R. Elwyn. Number of Boys from the Division who have left the School during the same Year, 4.

1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated, *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Greek Testament, Oxford text and Scrivener's; Horace, *Macleane and Orelli;* Virgil, *Conington and Wagner;* Terence, *Parry;* Lucretius, *Creech and Lachmann, Munro's text;* Cicero pro Cluentio, *Ramsay;* Tacitus Annales, *Smith's edition of,* Lib. I., *and Orelli;* Livy, Lib. I., *Oxford text, and Ruperti's Commentar;* Æschylus, *Paley;* Sophocles, *Wunder;* Euripides, *Dindorf's text;* Homer, *Heyne, and text;* Aristophanes, Ranæ, *Mitchell, and text;* Thucydides, *Arnold;* Demosthenes de Coronâ, *Drake;* Plato, Phœdo, *Stalbaum.* N.B.—These are the books of which portions were read between June 1860 and June 1861. Madvigs' or Key's, or Donaldson's Latin Grammar; Donaldson or Jelf's Greek Grammar; Smith's History of Greece; Liddell's History of Rome; Gleig's English History; Anderson's Geography.	Smith's Latin Dictionary; Liddell and Scott's Greek Lexicon; Smith's Antiquities; Smith's Biographical Dictionary; Harrow Atlas. The boys have access, and are continually referred to, the Biblical Dictionary, to Grote's and Thirlwall's, Arnold's Histories, &c.	Greek Testament, St. John, xiv., end, and Acts of the Apostles; Horace, Satires, Book II.; Virgil, Æneid, Book VI. and part of VII.; Terence, Adelphi; Lucretius, Lib. I.; Cicero pro Cluentio (about half); Tacitus Annales, Lib. I., i. to xl.; Livy, Lib. I., c. i. to xx; Æschylus, Sept. cont. Theb.; Sophocles Œdipus Rex; Homer's Odyssey, I., iii.; Aristophanes, Ranæ, i., 900; Thucydides, Lib. I., c. i. to xl.; Demosthenes de Cor., about one third; Plato, Phœdo, I., xx.	At the beginning of every lesson I ask various questions bearing on the previous lesson in the same author, and I then give my own translation of that lesson. I then set on various boys in the new lesson, taking them not in order, but at random, securing, as far as possible, that the work be equally distributed among the boys in the form. When a certain portion has been translated, I ask various questions, grammatical, historical, &c., and read portions of Grote, Thirlwall, &c., as the case may be, bearing upon the passage. The boys do not take places in the sixth form. If any boy has not prepared his lesson, or is ignorant on some particular point which I consider that he ought to know, I require him to write out a translation of the lesson, or some explanation of the point on which he shows ignorance.	It is impossible to answer this question in detail. I am in the habit of recommending boys in the sixth form to learn this or that particular passage in Latin *prose*, or *poetical* writer, or *Greek prose* or *poetical* writer, and I do not require the same amount from all, but in proportion to their ability. When a boy has a taste for English poetry, I encourage him to learn passages from time to time in lieu of a passage from Greek or Latin. From others I take a portion of history, to be answered *vivâ voce*. As the boys do not take places, no difficulty is created by this course, and I believe it to be beneficial. *For examination,* I give out certain parts—one of *the Georgics* and some *Ovid*, for instance, —to be learnt *by all alike.* In the course of a term some boys will learn the first three books of the Odes of Horace, and so on.	Smith's History of Greece, chs. xlii. to xlvi.; Liddell's History of Rome, chaps. lvii. to lxiii.; History of England, John to Henry IV.; Geography, India and China; Smith's Dictionary of Antiquities; *Greek*, the Drama; *Rome*, judicial proceedings. The substance of the classical authors mentioned in col. 3.

Fifth Form, First Division, 16 to 17 Boys. Mr. H. T. Forster. Number of Boys from the Division who have left the School during the same Year, 1.

Sophocles, *Oxford pocket edition;* Euripides, *Oxford pocket edition;* Virgil, *Oxford pocket edition;* Horace, *Oxford pocket edition;* Herodotus, *Oxford pocket edition;* Homer, *Oxford pocket edition;* Greek Testament, *editio recepta, Oxford* (or Greek Testament, *edidit F. H. Scrivener, A.M., Cantabrigiæ,* 1860); Cicero, Sallust, and Ovid contained in Latin and Greek authors (*Charterhouse*); Smith's History of Greece (16mo.); Liddell's History of Rome (16mo.); School History of England (Gleig).	Liddell and Scott's Greek-English Lexicon, 4to.; Smith's Latin-English Dictionary, 8vo., or Andrew's Latin Dictionary; Riddell and Arnold's English-Greek Lexicon, or Yonge's English-Greek Lexicon; Riddell and Arnold's English-Latin Dictionary; Butler's Atlas, Ancient and Modern; Dr. Smith's Classical Dictionary, 8vo.; Dr. Smith's Dictionary of Antiquities. The form also has access to Dr. Smith's larger Dictionaries of Biography and Mythology, Antiquities, &c. &c., when needed, and the Biblical Dictionary.	Sophocles, Œdipus Tyrannus; Euripides, Hecuba; Virgil, Georgics I., II., III., IV.; Virgil, Eclogues; Virgil, Æneid, V.; Horace, II., Satires, 1, 2, 4, 5, 6, 7; Herodotus, VII., 172, viii., 30; Homer's Iliad, xiii., xiv., xv.; Greek Testament, Acts of the Apostles, Matt. i. to xx.; Cicero in Catilinam, III., IV.; Cicero, pro Archiâ; Cicero, pro. Marcello.	Call upon any boy in the form to begin the construe. Generally permit the boys to construe in regular succession, as they sit in order of form, but frequently tell a boy to go on out of his turn. Errors generally passed down the form, but places not taken. Marks (Bene, Satis-bene, Satis, Vix, &c.) assigned to each boy, according to the way in which he construes and answers any questions that may arise. These marks, combined with those given for exercises and repetition, tend to determine the place of each boy in the form; but in the upper fifth no boy loses a place (except for misconduct) unless his marks fall considerably short of those of the boy below him.	Ovid, 400 lines; Virgil Georgics, I., II., III., IV.; Horace, Odes, I., II., III., IV.	Smith's History of Greece, chs. xlii. to xlv.; Liddell's History of Rome, chaps. lvii. to lxiii.; School History of England, John to Richard II.; Geography, Anderson's India and China; Smith's Dictionary of Antiquities. (*Greek*, the Drama; *Roman*, judicial proceedings.)

CHARTERHOUSE.

TABLE C.—CHARTERHOUSE.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same year.	9. Methods employed to test individual Proficiency in such "other Subjects."
ORIGINAL.					All the boys in the sixth form have a German lesson every Monday from 2 to 4 p.m.: this has been introduced about 3 years since. Some boys are able to read and write German very fairly; others are engaged in learning the grammar.	An annual examination in German is held and prizes awarded.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	About 12 copies in the course of the year, but *not* required *from all.*	18 copies (from 24 to 34 lines each).	None.	*See* French Report.		
Prose.	36 Sunday Essays upon some biblical or ecclesiastical subject, and 18 essays on historical or general subjects; no limit as to quantity.	18 essays, historical or general; no limit as to quantity.	None.	*See* French Report.		
TRANSLATION.						
Verse.	None.	30 copies from passages selected from various authors (Holden's Foliorum Sylvulæ occasionally used) about 28 lines each.	About 24 copies from passages selected from various authors (Holden's Foliorum Sylvulæ occasionally used), about 15 lines each.	*See* French Report.		
Prose.	Passage given every week from some Latin or Greek author to be done in school, without Dictionary or Lexicon.	About 42 copies from passages selected from various authors (Kennedy's Palæstra Styli Latini, and Selections for use of Charterhouse School occasionally used), about 20 lines.	About 20 copies; same as in preceding column.	*See* French Report.		
ORIGINAL.					None.	None.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None necessarily, but some verses done occasionally instead of English theme.	18 copies (about 20 lines each).	None.	*See* French Report.		
Prose.	54 copies (averaging about 60 lines each).	18 copies (averaging 36 lines each).	None.	*See* French Report.		
TRANSLATION.						
Verse.	None.	18 copies (about 20 lines each).	18 copies (about 14 lines each).	*See* French Report.		
Prose.	None.	36 copies (averaging 18 lines each).	18 copies (averaging 14 lines).	*See* French Report.		

CHARTERHOUSE.—TABLE C.

	1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Fifth Form, Lower Division, from 18 to 9* Boys. Mr. H. T. Forster. Number of Boys from the Form or Division of Form who have left the School during the same Year, 2.	Virgil, *Oxford pocket edition*; Horace, *Oxford pocket edition*; Herodotus, *Oxford pocket edition*; Homer, *Oxford pocket edition*; Greek Testament, *Oxford edition* (or Greek Testament edidit F. H. Scrivener, Cantabrigiæ, 1860); Cicero, Sallust, and Ovid, contained in Charterhouse Latin and Greek authors; Smith's History of Greece; Liddell's History of Rome; School History of England (Gleig); Wilkins' Greek and Latin Exercise books; Collis' Greek Iambics.	Liddell and Scott's Greek-English Lexicon; Smith's Latin-English Dictionary; Riddell and Arnold's English-Greek Lexicon; Riddell and Arnold's English-Latin Dictionary; Butler's Atlas (Ancient and Modern); Smith's Classical Dictionary; Smith's Dictionary of Antiquities.	Virgil, Georgics, I., II., III., IV.; Virgil, Eclogues; Virgil, Æneid, V.; Horace, II. Sat. 1, 2, 4, 5, 6, 7; Herodotus, VII., 172 to end; Homer, Odyssey, VII., VIII.; Homer, Iliad, XIII., XIV., XV.; Greek Testament, Acts of Apostles, St. Matthew, i., xx.; Cicero in Catilinam, III., IV.; Cicero Pro Archiâ; Cicero Pro Marcello.	Call upon any boy in the form to begin the construe; generally permit the boys to construe in regular succession, as they sit in order of form, but frequently tell a boy to go on out of his turn. Errors passed down the form and places taken. The lowest boy is marked "1," the second "2," and so on, and these marks, combined with those for exercises and repetition, determine the place of each boy for the week; and the sum total of the places taken each week determines the place of each boy for the quarter. It is customary to promote one or two boys from the top of this form into the upper 5th, at the end of each quarter.	Ovid, 300 lines; Virgil, Georgics, III., IV.; Horace, Odes, I., II., III.	Smith's History of Greece, chapters 42, 45; to Liddell's History of Rome, chapters 57 to 63; School History of England, John to Richard II.
Fourth Form, 17 Boys. Rev. F. Poynder, Usher, Master of the Fourth Form. Number of Boys from the Form or Division of Form who have left the School during the same Year, 1.	Greek Testament; Homer; Xenophon; Horace; Cicero; in each case the text only is used. Anderson's Geography; Liddell's Roman History; Markham's English History.	Charterhouse Latin and Greek Grammar; Smith's Latin Dictionary; Riddell's Latin Dictionary; Smith's Classical Dictionary; Liddell and Scott's smaller Lexicon; Harrow Atlas.	Greek Testament. St. Mark, vii. to xvi.; Greek Testament, St. Matthew, i. to xx.; Homer, Iliad, III., 1 to 363; Xenophon, Cyropædia, B. I. c. 3, and greater part of c. 4; Horace, Odes, Books II., III., to construe and repeat; Cicero pro Milone, chap. v. to xiii.	My method of hearing a form is as follows:—The whole form is before me at the same time; before beginning to construe any lesson *vivâ voce*, the written translation of the last lesson (which has been prepared by the boys since it was construed in school) is read in such order and by such boys as I then arrange, I then call on a boy to construe a portion of the new lesson, *vivâ voce*. I call on each boy in the form. I frequently have the same passage construed a second time, by a second boy. I give such explanations as I feel to be important, and as time will allow. When every boy in the form has construed, or sometimes before, I usually make each boy give the principal parts of one or two verbs, or a Greek paradigm, or the construction in the sentence of one or two words with the Grammar rule which illustrates the construction. *Mistakes are always passed down the form, and places are taken. At the end of each lesson each boy's place in the form is marked, and at the end of each week all these numbers are added together, and the boys are arranged according to their marks on the whole week, and in that order they begin their work for the following week.*	Horace, Odes, Books II. and III.	Anderson's Geography, pages 55 to 82; Liddell's Roman History, chaps. 59 to 61; Markham's English History, James I. to Charles II. (end of reign).
Shell, from 19 to 20 Boys. Mr. J. W. Irvine, Master of Form. Number of Boys from the Form or Division of Form who have left the School during the same year, None.	Greek Testament; Horace, text; Homer's Iliad, text; Charterhouse Latin authors; Charterhouse Greek authors; Charterhouse Latin Grammar; Charterhouse Greek Grammar; Markham's History of England; Goldsmith's Grammar of Geography; Arnold's Latin Prose Composition, part 1; Major's Greek Praxis; Walford's Latin Elegiacs.	Smith's Latin English Dictionary; Liddell and Scott's smaller Lexicon; Smith's smaller Dictionary of Antiquities; Smith's smaller Classical Dictionary; Carey's Gradus; Harrow School Atlas (modern); Harrow School Atlas (ancient).	Greek Testament, St. Matthew; Horace, Odes, Book I.; Iliad, II., 1 to 332; Xenophon. Cyropædia, II. and III.; Cicero, Pro Milone, I. to VI.	In preparation for each construing lesson, every boy is required to make (out of school) a vocabulary containing all the hard words in the lesson, together with the principal parts of all the verbs. At the beginning of the lesson every boy is required to produce a written translation of the previous lesson from the same author. Boys are selected at random to read out this translation, and places taken for inaccuracies, &c., then some boys near the top of the form are called upon in turn to construe the *new* lesson. Questions are asked and explanations given upon grammatical construction, geography, history, and mythology, &c. The lesson is then construed over by boys near the bottom of the form. In the case of history lessons, questions are asked at the beginning of one lesson upon what was read the time before, after which the new lesson is read aloud by the boys, so as to serve as a lesson in reading.	Horace, Odes, I., 1 to 30.	Markham's History of England, from beginning to Henry VII.; Anderson's Geography, Europe and America.

* 3 Boys are at the end of each term promoted into the Upper 5th, hence the apparent diminution in numbers.

CHARTERHOUSE.—TABLE C.

	1. Authors or Books used, (not being mere Books of Reference,) with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Third Form, from 12 to 14 Boys. Mr. J. W. Irvine, Master of Form. Number of Boys from the Form or Division of Form who have left the School during the same Year, 3.	Greek Testament; Homer's Iliad; Charterhouse Latin Authors; Charterhouse Greek Authors; Charterhouse Latin Grammar; Charterhouse Greek Grammar; Markham's History of England; Goldsmith's Grammar of Geography; Arnold's Latin Prose Composition, Part I.; Major's Greek Praxis; Walford's Latin Elegiacs.	Liddell and Scott's Lexicon (small); Smith's Latin-English Dictionary; Smith's smaller Dictionary of Antiquities; Smith's smaller Classical Dictionary.	Greek Testament, St. Mark, i.–xi.; Æneid, I., l. 460; Iliad, I., l. 1–244; Xenophon's Anabasis, Lib. I., Chap. i., ii., iii.; Cicero De Amicitia, I.–IV.	See Report upon the Shell, the method being the same.	Æneid, l. 1–385.	Markham's English History, William I.–Hen. VII.; Anderson's Geography, *Europe* and *America*.
Second Form, from 15 to 18 Boys. Rev. F. Poynder, Usher, Master of the Second Form. Number of Boys from the Form or Division of Form who have left the School during the same Year, 1.	Greek Testament; Greek Delectus; Ovid; Cæsar (the text only is used); Outlines of Geography; Markham's English History.	Charterhouse Latin and Greek Grammar; Riddell's Latin Dictionary; Liddell and Scott's smaller Lexicon.	Greek Testament, St. John, chap. i.–ii.; a few pages of Greek Delectus; Ovid, Penelope Ulyssi, to construe and repeat; Cæsar De Bello Gallico, Book I., 7 or 8 chapters.	I may perhaps here be allowed to refer to the statement which I have made as to my method of hearing the *Fourth Form*, as I could only repeat that here. There is one point of difference only, viz., that this lower form is *not* required to prepare a written translation of each lesson which is construed in school.	Ovid, Penelope Ulyssi.	Outlines of Geography, p. 1-23; English History, Henry IV–VI.
First Form, from 7 to 14 Boys. Rev. R. R. Watts. Number of Boys from the Form or Division of Form who have left the School during the same Year, 1.	Stoddart's Latin Delectus; Wilkins' Greek Delectus; Charterhouse Latin and Greek Grammar; Henry's First Latin Book; Markham's History of England.	*Geography* published by the Society for Promoting Christian Knowledge, with small Atlas.	The only subjects translated are passages from the Latin and Greek Delectus, the quantity of which varies according to the proficiency of the form.	The *repetition* lessons of grammar are for the most part taken singly, each boy repeating the *whole* lesson, except on Saturday mornings, when the repetition of the week is repeated. In the *construing* lessons, the translation of the previous lesson is first read out, and then the vocabulary of verbs; after which the lesson is construed sentence by sentence, and as far as possible every word parsed. Places are taken, and the numbers are entered in a register, and added up at the end of the week. At the end of each school quarter the totals of the weeks are added together, and places for the quarter taken accordingly.	The First Form learn by heart very little beside the Latin and Greek Accidence, the 1st and 2d Parts of the Latin Syntax, and the 1st Part of the Greek Syntax from the Charterhouse Grammar. They occasionally learn some English poetry from a selection compiled for Charterhouse School.	Markham's History of England, William I. to John.

The Mathematical Books used are—
Euclid, *Potts*.
Arithmetic, *Colenso*.
Algebra, *Todhunter* and *Colenso*.
Trigonometry { *Colenso*. *Todhunter*.

Wrigley's Examples.

CHARTERHOUSE.—TABLE C.

French, First Division, 28 Boys. M. Alphonse Mariette.
Number of Boys from the Form or Division of Form who have left the school during the same Year.—*See* Classical Reports.

1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Brasseur's French Grammar; Noël and Chapsal's Grammaire Française and Exercices; Mariette's Half hours of French Translation; Racine, Théâtre; Poulain de Bossay, Histoire de France; Demogeot's Histoire de la Littérature Française.	Spiers' English-French Dictionary; Lafaye's Dictionnaire des Synonymes.	Noël and Chapsal's Exercices Français, c. i.–ix.; Racine's Iphigenie, Act iii.; and also extracts from,— Addison, Goldsmith, Johnson, Burke, Mackintosh, W. Scott, Southey, De Quincey, Macaulay, Hallam, &c.; Cooper, Prescott. Washington Irving, &c., and The *Times* newspaper, &c.	Each boy in his turn reads a sentence, either from his book, if it be a merely oral translation from French into English, or from his paper if it be a written exercise from English into French. When a mistake is made, the master does not correct it at once, but calls upon the next boy or boys to correct it, and places are taken accordingly. The order in which the boys are made to "go on" is not regular, but constantly varied, as it keeps them more attentive and breaks the routine of the work. The idiomatic difficulties of this, at once the most precise and the most supple of modern languages, are also carefully attended to in this class, and the peliar meanings of such verbs as *aller, donner, faire, en être, y être, tenir à, se tenir à, en tenir, &c.*, form the subjects of regular exercises, both written and oral.	Racine, Iphigénie, 200 lines; Voltaire, Zäire, 75 lines; Milleroye, Poësies, 60 lines; Lamartine, Méditations, 80 lines.	Demogeot's Littérature Française, the 17th century. Poulain de Bossay's Histoire de France, from the death of Charlemagne (A.D. 814) to that of Louis XI. (A.D. 1483.)

French, Second Division, 28 Boys. M. Alphonse Mariette.
Number of Boys from the Form or Division of Form who have left the School during the same Year.—*See* Classical Reports.

Brasseur's French Grammar; Brasseur's Manuel des Ecoliers.	Spiers' English-French Dictionary.	Brasseur's Manuel des Ecoliers, about 40 pages. Extracts from:— Châteaubriand, Lamennais, Guizot, Augustin Thierry, Alexis de Tocqueville, De Ségur, &c.	The correction of the written or *vivâ voce* work is carried on in this class on the same *practical* plan as in the 1st class. A quick brisk questioning, from one end of the class to the other, takes place during the last ten minutes of the lesson, to ascertain how far the corrections and observations have been listened to and taken in. The *literal* translation of easy French into English is frequently done in this class; that is, being given a familiar French sentence, instead of translating it into correct English, which is too often mere guess work, the boys have to clothe it as it were with English words, leaving untouched the idiosyncracy of the French writer, with which they are thus much more likely to be struck through the very grotesque nature of the rendering. Time is also found in this class for occasional *dictations*.	Brasseur's Manuel des Ecoliers, Guizot, A. de Tocqueville, Villemain, Aug. Thierry, in all, about 180 lines.	Brasseur's French Grammar, Part 1st.

TABLE C.—CHARTERHOUSE.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					Observations.
ORIGINAL.					It is universally admitted that the teachers of foreign languages labour under great disadvantages in public schools. Not to speak of other circumstances that tell more or less against them, they have to contend with one great difficulty, especially in a school of such high *classical* standing as Charterhouse. With Oxford and Cambridge, in their present organization, before them, the boys feel, not unreasonably, that far from being immediately repaid for any amount of industry bestowed on French, and proficiency attained in its very difficult phraseology, they simply take away so much time and attention from the study of *university* subjects, and thus far proportionately damage their chance of success in the great final contest for academical distinction, and especially in competitive examinations for scholarships, &c., at the outset of college life. Of course, with them, the great, and we venture to add, the unsurpassed advantage of a thorough study of the French syntax as a mental discipline, and the invaluable profit to be derived from an acquaintance with the daily increasing treasures of the highest and purest literature, these and other considerations have no weight whatever with the boys, who, if they think at all on the subject, think very much as their fathers might well have thought 300 years ago. Such being the case, the French master feels all the more bound to exert himself to make his teaching at once attractive and comprehensive, encouraged, as he is thankful to state he has always been, by the Head Master of Charterhouse School; indeed, he feels that the *miscuit utile dulci* is here a matter of necessity, and he cheerfully submits to the compromise. The French language in this class is made a *means* as well as an *end*. Thus, not only is French literature (in its outlines) part of the programme of this class, but the History of France (as a special subject of conversation in French) is also introduced. No classical, historical, or any such allusion is allowed to pass unnoticed, unexplained; and whilst very little is said of the abstract theory of grammar, a constant *practical* comparison is made between the English and French languages, with occasional reference to the Latin and Greek syntaxes; a method which, while putting French on its right footing, tends to make its teaching harmonize with the whole system of education in a *classical* school.
	English.	Latin.	Greek.	Modern Foreign.	
Verse.	*See* Classical Report.			None.	
Prose.	*See* Classical Report.			About 20 letters or idiomatic conversations or essays (in French), the latter chiefly on subjects connected with the history or literature of France.	
TRANSLATION.					
Verse.	*See* Classical Report.			About 200 or 300 lines, mostly from contemporary writers.	
Prose.	*See* Classical Report.			About 700 or 800 lines from Mariette's "Half-hours of French Translation," 2nd Edition.

TRANSLATION.					
Verse.	*See* Classical Report.			Lamartine, Prière de l'Enfant à son réveil.	
Prose.	*See* Classical Report.			Extracts from the Manuel des Ecoliers (about 500 lines).	

CHARTERHOUSE.—TABLE C.

French, Third Division, 26 Boys. Mons. Le Riche.
Number of Boys from the Form or Division of Form who have left the School during the same Year. *See* Classical Reports.

1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Brasseur's French Grammar; Ahn's First French Course (*Buckheim's*).	None.	Brasseur's Grammar, first 48 pages; Ahn's First French Course, about 40 pages.	Each boy reads in his turn a sentence of the exercise, and after it has been duly corrected, if it refers to some grammatical rules, questions are freely asked further to illustrate those rules and to satisfy the master that they have been perfectly understood. If the exercise be a translation from French, a few sentences are parsed, and here and there the boys are requested to read out a given phrase in a different way, for instance to change the *number* of all variable words in it, putting every singular in the plural, and *vice versâ*, a method which must after a time enable the pupils—without much mental exertion—to master not only the general construction of a sentence, but also the individual character of each separate word.	Brasseur's French Grammar; the *Verbs* and the *Vocabulary* of words most in use.	Brasseur's French Grammar, the principal rules of the elementary part.

ST. PAUL'S.—TABLE C.

ST. PAUL'S - - - - - -

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Class in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Eighth Class, 18 Boys. The High Master. Number of Boys from the Class who have left the School during the same Year, 10.	Greek Testament, Epistles to the Galatians and Ephesians, Dean Alford's edition mostly used; Sophocles, Œdipus Coloneus; Thucydides, VII., 1-54, *Arnold's edition* mostly; Aristophanes, Ranæ, *Holden Text, Dindorf;* Plato, Apologia, *Bekker;* Horace, Satires, B. I., *Doering and Maclean;* Cicero, de Finibus, B. II., *Oxford Press edition;* Terence, Andria. The books used by the boys are for the most part simply *text books*, portable and inexpensive. In hearing lessons in the school library, reference is made to commentators, and explanations and references are given by the High Master during the hearing of the particular author.	Liddell and Scott's Greek Lexicon; Dr. Smith's Latin Dictionary; Dr. Smith's Classical Antiquities; Dr. Smith's Mythological Biographical Dictionary; Dr. Smith's Geographical Dictionary; Long's Atlas (in general use); Richardson's English Dictionary, Dictionnaire de l'Académie, and Ducange, used frequently for reference during lessons. The school library, in which the lessons of this class, classical and mathematical, are heard, offers every facility for collateral reading to the upper boys.	Greek Testament, Epistles to the Galatians and Ephesians; Sophocles, Œdipus Coloneus; Aristophanes, Ranæ; Thucydides VII., 1-54; Plato, Apologia Socrates; Horace, Satires, B. I.; Cicero de Finibus, II.; Terence, Andria.	The boys do not construe in regular order, but as the High Master calls them up, each taking a few lines of the lesson; the questions incidentally occurring are put to them, and so on to others, being more fully explained afterwards by the High Master. In this class no change of places is allowed, but the boys are ranked by the examiners at the apposition, and marks assigned for every paper in each portion of the classical examination. The repetition lessons are heard from each boy separately, with questions put to ascertain his knowledge of the construing and allusions. The retranslation lessons, twice a week, are heard with the class all up at once. The High Master gives the verse, and calls on the boys, each by name, but not in order, for the Latin or Greek rendering.	Sophocles, Œdipus Coloneus, about 1,000 lines, omitting chorus, by retranslating *vivâ voce;* Virgil, Æneid, VII Book, about 400 lines by repetition; Horace 4 Odes, by repetition; Terence, Andria; Acts I., II., by retranslation; Cicero de Finibus, 16 chapters of the first book, by retranslation.	None.
Seventh Class, 15 Boys. The High Master. Number of Boys from the Class who have left School during the same Year, 3.	Greek Testament; Herodotus; Euripides; Virgil; Horace; Livy (*Hunter's edition*).	Liddell and Scott's Lexicon; Dr. Smith's Latin Dictionary, and other books of reference; Classical Dictionary; Antiquities, &c.; Collis, Praxis Iambics; Long's Atlas.	Greek Testament, Acts i.-xiii.: Herodotus, Book V., 55-107 (incl.); Euripides, Medea, from verse 1,000 to end; Euripides, Hecuba, I. to V. 656; Virgil, Æneid, Book VI.; Horace, Odes, I.; Livy, Book XXIII., from 43rd chapter to the end of the book.	Similar to that of hearing the 8th Class, except that in this class the boys change places every lesson.	Horace, Odes, Book I., repetition; Virgil, Æneid, VI., retranslation; Euripides, Hecuba and Medea, about 1,000 lines retranslation.	None.
Sixth Class, 15 Boys. Rev. J. Kempthorne. Number of Boys from the Class who have left the School during the same Year, 4 (not included in the 15).	1. Greek Testament (*Scrivener's edition*); 2. Homeri Ilias (*text*); 3. Æschylus (*Paley's edition, text only*); 4. Xenophonti Cyropædia (*Teubner edition*); 5. Plato's Crito, &c., (*Teubner edition*); 6, Virgil (*Conington's Text*); 7. Livy (*Oxford edition*); 8. King Edward VI.'s Latin Grammar; 9. Wordsworth's Greek Grammar; 10. T. K. Arnold's Introduction to Latin Prose Composition; 11. T. K. Arnold's Introduction to Greek Prose Composition; 12. First Latin Verse Book.	Smith's Classical Dictionary; Smith's Dictionary of Antiquities; Long's Classical Atlas; ArchdeaconBrowne's Histories of Greece and Rome; Liddell and Scott's Greek and English Lexicon (smaller edition); Latin-English Dictionaries (various).	Gospel according to St. Luke; Homer, Iliad, II. (1-493), III.; Æschyli Persæ, Xenophon, Cyropædia, Lib. I., cap. vi.; Platonis Crito; Virgil, Æneid, IV., V.; Livy, III., 36 to end.	Before the lesson at present due, the last lesson done in the same author is gone over again rapidly (chiefly by boys in the upper portion of the class), with a few questions in passing to test the attention to and recollection of such last lesson. Then the fresh lesson; each boy who is called up, reading and construing 5 or 6 lines, and being then asked questions on parsing, historical allusions, etymology, usage of words, &c. Each error in construing, and each question unanswered or wrongly answered by such boy is passed to the next boy, and so on down the class; if then it is unanswered, it passes to the head boy, and the next such question to the boy below the last who has been so asked, the giver of the correct answer taking place above those whom the question has passed. The boys bring up small note books and enter notes upon such matters as the master comments on and directs in the course of the lesson; the care and attention given to the notes being tested by the reproduction of the lesson with the next succeeding one, and by the fortnightly examination. At each lesson about 8 or 10 boys are put on; each boy thus is put on about three or four times in a week. The master enters a number in his mark book against each boy's name for each time of going on, in proportion to the accuracy and good style of his performance; and to these and other marks (for repetitions, exercises, &c.) are added at the end of the week the "place" marks taken at the end of each day, the last boy getting 1, the next above him 2, and so upwards. The sum of the fortnightly examinations is added to the class marks at the end of the term.	Virgil, Æneid, III., about 400 lines; Greek Testament, about 200 verses; Livy, Book III., about 10 chapters, said with the aid of an original MSS. translation just made.	Browne's History of Greece, 20 chapters, as far as the death of Alexander; Greek grammar, portions regularly given in Wordsworth's Greek Grammar (originally learnt in earlier classes), or practise lessons in declension, conjugating, or parsing. (It is obviously almost impossible to state the quantity so done.) A short lesson of this kind accompanied the first construing lesson every day; Latin grammar as in Greek grammar. The book-work connected with exercises 1–67 of Arnold's Latin Prose Composition, and exercises 1–30 of his Greek Prose Composition. Several articles from the Dictionary of Antiquities or Classical Dictionary. Selected chiefly with reference to some point in the lessons at the time.

* The time in all these returns is calculated from June 1860 to June 1861, from apposition to apposition.

ST. PAUL'S.

TABLE C.—ST. PAUL'S.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Class in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Class, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
	ORIGINAL.				None.	None.

Verse.	One copy.	10 copies of Latin hexameters (of about 12 lines each); 8 copies of Latin elegiacs (of about 12 lines each); 3 copies of Latin lyrics during the year (about 12 lines each).	1 copy of Greek iambics‡ during the year.	*See* French Master's Report.		
Prose.	None. An English theme or essay forms now a regular part of the composition work of this class, in turn with the Latin and Greek verse and prose translations.	About 30 translations, chiefly of passages from the Spectator, during the year, say about 12 to 20 lines each.	1 Greek prose translation during the year.	Ditto.		
	ORIGINAL.				On alternate Saturdays a lesson in geography; some map in the Ancient Atlas named for preparation on the Friday evening. A large map of the same district is prepared by the master, without the insertion of names, and the boys are questioned on their knowledge of the natural and territorial divisions, &c. This is accompanied by observations, comparison with the modern map, corresponding, &c. The boys being again questioned on such observations. In the year in question, Ancient Greece, Italy, Asia Minor, Rome, and its neighbourhood, the Ægean Sea, and Palestine, were so studied. (More than one lesson devoted to each.) It is in contemplation to name some subject in physical science (or other suitable subject) for elementary study during the Midsummer holidays; *e.g.*, last Midsummer holidays "Henfrey's Elements of Botany" were named, and Lindley's School Botany also recommended, and the boys were invited to collect specimens.	An examination after the holidays, not affecting the position in the class; but a list given out of all those examined, in order of attainment, and small prizes given.

	TRANSLATION.					
Verse.	None.	34 copies (selected from various English authors), about 550 lines in all.	None.	*See* French Master's Reports.		
Prose.	None.	34 copies of Latin prose, chiefly from Dr. Arnold's History of Rome, and Wilkins' "Latin Prose," each exercise about one page 4to foolscap. Arnold's Latin Prose, exercises 1-67.	T. K. Arnold's Greek Prose Composition, exercises 1-30.	Ditto.		

† These returns are exclusive of the exercises written for the prizes during the holidays or the half year which precedes the apposition examination.
‡ These exercises form at present (1862) a portion of the regular work of this class, a copy being done about once a month.

ST. PAUL'S.—TABLE C.

	1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *viva voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Class in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Fifth Class, 19 Boys. Rev. J. Kempthorne. Number of Boys from the Class who have left the School during the same Year, 2 (not included in the 19).	1. Greek Testament (*Scrivener's edition*); 2. Xenophon's Anabasis (*Teubner*); 3. Cicero, Cato Major, Læ-lius, and *Selection of Epistles, by George Long*; 4. Virgil (*Conington's Text*); 5-9 identical with 8–12 of 6th Class.	(Same as for 6th Class.)	Gospel according to St. Luke; Xenophon's Anabasis, Lib. III.; Cicero, Long's Selection of Epistles, Book I., and Cato Major, cap. i.-xvii.; Virgil, Æneid II.	[As in 6th Class.]	Greek Testament, as in Class 6; Virgil, Æneid II., about 350 lines, besides about 300 lines of Virgil, and a corresponding quantity of Cicero, said with the help of an original MS. translation just made.	History, grammar, and book-work of Arnold's Exercise Books, as in Class 6.
Fourth and Third Classes, 40 Boys. Rev. E. T. Hudson. Number of Boys from the Class who have left the School during the same Year, 6.	(4th.) Eton Ovid (Metamorphoses); *White's* Diatessaron; *Long's* Cæsar de Bello Gallico; Greek Delectus. (3rd.) *Eton* Ovid and Tibullus; *Eton* Cornelius Nepos; Greek Delectus.	Browne's History of Greece; Browne's History of Rome; Gleig's History of England; Gleig's History of India; Denison's Lexicon to the New Testament; Latin Dictionaries; Arnold's Ellisian Exercises;* Rowden's Bland's Elegiacs; St. Paul's Latin Grammar; Wordsworth's Greek Grammar. * Instead of Arnold, they now (1862) use Bradley's Latin Exercises.	(4th.) Ovid Metamorphoses, about 800 lines; Diatessaron, about 40 pages; Cæsar, about 2 books; Greek Delectus, 27 pages. (3rd.) Ovid, about 500 lines; Nepos, one of the longer lines, and one or two of the shorter; Greek Delectus, 15 pages. (N.B. In the 3rd class the boys begin to learn Greek.) (The above statements are approximate only, except with regard to the Greek Delectus. I cannot find any exact record of the rest. E. T. Hudson.)	Each class comes up separately. Each boy construes a sentence or more, not in order, but as he is called upon by name, explaining allusions. Then each boy answers one or more questions regarding the form of words, and then regarding the construction. They scan Latin and Greek hexameters and pentameters, and Greek iambics.	Various portions of Cæsar, Ovid, the Diatessaron, Nepos. N.B. This is done by way of re-translation, not repetition.	None.
Second and First Class, 14 and 16 Boys. Rev. James Cooper. Number of Boys from the Class who have left the School during the same Year, from 2nd Class, 2, from 1st Class, 2.	Valpy's Latin Delectus, by *White*; Eton Selectæ e Vetere Testamento Historiæ; St. Paul's Latin Grammar; Eton Exempla Minora.	None.	(2nd Class.) Latin Delectus, pp. 21-77; Selectæ Historiæ, pp. 1-46. (1st Class.) Latin Delectus, to p. 20.	Each boy is required to construe, and every word is parsed. English translation as exercise to be re-translated into Latin.	None.	The several portions of the Latin Grammar, including Accidence, Propria quæ maribus, quæ genus, and As in præsenti, are committed to memory.

ST. PAUL'S.—TABLE C.

DISTRIBUTION OF THE SCHOOL FOR FRENCH.

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Class in such construing or translating Lessons.
First Three Divisions, composed of Classes V. to VIII. 50 Boys, M. Tito Pagliardini, (14 Boys not here included had ceased learning, or left after Christmas, 1860.) Time, four hours a week for the whole Division.	8th Class. Delille's Répertoire des Prosateurs; Delille's Modèles de Poésie; Mariette, Half-hours of Translation; Racine, Théâtre.	Biographie Universelle ou Dictionnaire Historique.	8th. Poésie, 80 close pages; Racine, Bajazet.	8th Class. Construe in order. Ask grammatical and other questions. All errors passed down the form, and marks given. Mariette's Half-hours of Translation alternately in writing and *vivâ voce*. Occasional conversations *in French* on art, science, literature, and history. *Dictée* with explanations from Masters.
	7th Class. Delille's Répertoire; Delille's Poésie; Mariette, Half-hours.	Malte-Brun; Géographie Universelle avec Atlas.	7th. Répertoire, Poésie, about 100 pages of each.	7th Class. Construe by selection. Grammatical and philological questions asked *in order*, all errors passed down, and places taken accordingly. Necessary historical and geographical explanations made in French by the Master. *Vivâ voce* translations into French, from Mariette's Half-hours. *Dictées* with explanations.
	6th & 5th Classes. Delille's French Grammar; Delille's Répertoire; Delille's Poésie.		6th & 5th. Répertoire, Poésie, about 100 pages of each. N.B.—From a recent improvement in the distribution of the classes, the authors studied will be more varied and numerous.	6th & 5th Classes. Delille's Grammar (syntax). Exercises translated *vivâ voce* from the grammar by selection; the written exercise having been previously delivered up to the master to be corrected, and number of faults in each inscribed in the register. Errors passed down and places taken accordingly. Grammatical questions put in order. All errors passed down the form, &c. *Vivâ voce* and written translations from the French.
Last Three Divisions, composed of Classes I. to IV., M. Léonce Stievenard, 87 Boys.	Delille's Grammar; Delille's Répertoire des Prosateurs Français.	None.	Delille's Répertoire des Prosateurs Français, about 40 pages.	Exercise read aloud from paper or book. Exercise said without book or paper from French into English, and English into French. Verbs repeated and practised in every conceivable manner. Short promiscuous sentences repeated from memory. Translate from French into English, written translation, reading aloud translation, ditto. Parsing of all the words. Re-translation from paper. Translation and re-translation without book or paper.

Distribution of the School for Mathematics.

The school is divided into *four* classes or divisions in this department for instruction in mathematics, and the higher and more elementary branches of arithmetic. The time allowed is *four hours* a week taken in the afternoons of Monday and Thursday, from *two* to *four*.

First Division, containing 28 Boys.

William Lethbridge, Esq., M.A.

This division is subdivided at present into *four* classes or sub-divisions, of which the highest, represented lately by a single boy, read *Differential Calculus* (Todhunter's edition) and *Problems in Analytical Geometry*.

The second, containing *six boys*, read *Trigonometry* (Beasley), and *Algebra* (Todhunter).

The third, containing also *six boys*, read *Algebra*, (Colenso, Part I.)

The fourth, containing *fifteen boys*, read Arithmetic, *Barnard Smith's*, and *Colenso's Algebra*, Part I.

Euclid (*Potts*) forms a lesson for each division, and some is either written or said each afternoon.

The three upper sub-divisions have read Books I.–IV., VI.–XI. The others Books I.–IV.

In the case of the second sub-division, algebra and trigonometry are taken alternately, as also is the case with the arithmetic and algebra of the lowest division.

TABLE C.—ST. PAUL'S.

5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.	7. The Kinds and Quantities (so far as they can be given) of Composition done in the Class in the same Year.			
		Translation.*			
			English.	Latin.	Greek.	Modern Foreign.
Molière; Extracts from the Poésie Racine.	None.	Verse.		See Classical Report.		None.
Lafontaine, Fables; Corneille (Scenes from Le Cid). N.B. These are written from memory the week after they are learned, and errors counted and inscribed in Master's register.						
Various pieces from the Prosateurs Français and Choix de Poésie. (Generally written from memory the week after, all errors counted and inscribed in Master's register.)		Prose.		See Classical Report.		8th and 7th Classes. Mariette's Half-hours of Translation, (about 30 pages). [*See* Col. 4.]
40 pages of Delille's French Grammar. 40 pages of Delille's Répertoire des Prosateurs Français.	None.	Translation				
			English.	Latin.	Greek.	Modern Foreign.
		Verse.		See Classical Report.		None.
		Prose.		See Classical Report.		40 pages translation from Repertoire des Prosateurs Français.

* No original composition is done in French.

Distribution of the School for Mathematics—*continued.*

Second Division (34 Boys).

The Rev. J. W. Kempthorne, M.A.

This division is distributed into two classes (usually). The *upper* learns as far as Simple Equations (Colenso's Algebra), and Euclid, Book III., (Potts). The *lower* learns simple rules in Algebra, and the commencement of *Simple Equations*, postponing *Involution* and *Evolution*, *Greatest Common Measure* and *Fractions*, with the greater part of Euclid, Book I.

One sub-division receives instruction, or gives up results of examples, while the other is doing examples.

Both are prepared in *Euclid*, to be said while examples, &c. are being done, on *Thursday*, the upper division only on *Monday*.

Third Division (44 Boys).

The Rev. E. T. Hudson, M.A.

This division is subdivided into two classes. The upper boys go through the usual course of *Arithmetic*, Barnard Smith's Arithmetic for Schools, except sometimes, when they do *Discount* and *Stocks*.

The lower boys learn the elementary rules, together with fractions, decimals, practice, and rule of three.

Fourth Division (47 Boys).

Lately, Rev. James Cooper, M.A., now Rev. J. H. Shepard, M.A.

This division consists of boys for the most part so little prepared, at their first coming to school, as to present few opportunities of systematic classification, or regular details of works. It contains little boys for the most part varying between *nine* and *eleven* years of age.

MERCHANT TAYLORS'.—TABLE C.

MERCHANT TAYLORS' - - - - -

HEAD FORM, 23 Boys. THE HEAD MASTER, the REV. DR. HESSEY. Number of Boys from the Form who have left the School during the same Year, 12.

1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same year.
Bythner's Hebrew Grammar (*Dr. Hessey*); Bythner's Lyra Prophetica; Hebrew Psalter and Pentateuch; History and Teaching of XXXIX. Articles (MSS. notes dictated); History and Doctrines of the Bible; Greek Testament; Bp. Joseph Butler's Analogy and Sermons; Paley's Evidences; Horace, Juvenal, and Persius; Terence and Plautus; Lucretius and Catullus (occasionally); Cicero, Orations; Cicero, de Naturâ Deor.; Cicero, de Senect. and de Amic.; Cicero, Epist. ad Atticum; Ovid, Fasti; Livy; Homer, Iliad; Homer, Odyssey (occasionally;) Herodotus; Thucydides; Æschylus; Sophocles; Aristophanes, (Holden's Select Plays); Æschines, and Demosthenes. No editions, (Aristophanes is an exception), are insisted upon, (in fact I rather like to have a variety in the Form), but every boy is expected to be provided with a simple text for the purposes of lessons, and for marking difficult passages in. Hume's, (Student's), History of England; Macaulay, Vol. I. and II.; Chapman's Every Day French Talk; Delille's French Grammar; Delille's Prosateurs Français; Spiers' School Dictionary; Delille's Modèles de Poésie; Le Brun's Materials for translating French into English; Descarrière's Histoire de France. The Head Form constitutes a French Class by itself.	Liddell and Scott's Greek Lexicon; Dr. Smith's, or Dr. Andrew's Latin Dictionary; Wordsworth's Greek Grammar; King Edward's Latin Grammar;—(these every boy must have of his own). There are also copies among the Form of the following, which are continually referred to, both in learning and in saying lessons. Dr. Smith's Dictionary of Classical Antiq.; Dr. Smith's Dict. of Biog. and Myth.; Dr. Smith's Dict. of Geography; Dr. Donaldson's Greek Theatre; *Schmitz's* Zumpt's Grammar; *Jelf's* Kühner's Grammar; Key's Latin Grammar; Cramer's Maps—Italy, Greece, and Asia Minor; Maps of Palestine; a variety of Atlases; Cockerell's Restorations of Rome and Athens; Damm's Homeric Lexicon; the LXX.; the "Indices" to Æschylus, Sophocles, and Euripides; Grote's History of Greece; Thirlwall's History of Greece; Niebuhr's Lectures on Roman History; Arnold's History of Rome; and a great many more Books of Reference. (Nearly every boy has a volume or two, either of Grote or of Thirlwall, of his own, in which he is recommended to make references to the Greek Historians). Boys are recommended to purchase the following:—Gesenius or Lee's Hebrew Lexicon; Gesenius or Lee's Hebrew Grammar; Hebrew Exercises to Stuart and Lee; Robertson's Clavis Pentateuchi; Max Müller's Survey of Language and Lectures on the Science of Languages; Barrett's Comp. to New Test.; Dean Trench on the Study of Words and on the Synonymes of the New Testament.	*June* 1860 to *June* 1861. Herodotus, B. VIII.; Æschylus, Agam. 1—1100; the Gospel of St. Mark (Greek); Horace, 1st B. of Epistles and Ars Poet.; Lucretius, B. I. 1—500; Cicero de Senectute and 1st Cat. Orat.; Homer, Iliad, X. and XI.; Sophocles, Antig.; Virgil, Eclogues, I.—VII.; Persius, 2 Sat.; various Hebrew Psalms; various portions of the Bible; XXXIX. Articles. As the above does not give an idea of the course which a boy goes through in the Head Form during his four years continuance in it, I subjoin— FIRST. Books used from *June* 1861 to *Dec.* 1861; Aristophanes, Acharnians; Homer, Iliad XXII.; Thucydides, latter half of B. I.; the Epistle to the Galatians (Greek); Catullus, Odes, 1, 2, 3, 4, 11, 12, 13, 17, 18, 22, 26, 27, 30, 31, 34, 35, 38, 39, 40, 44, 45, 46, 47, 49, 50, 51; Cicero, pro Archia; Juvenal, X., XI., XII.; Horace, Epodes; various Hebrew Psalms and portions of the Bible; XXXIX. Articles. SECOND. *June* 1859 to *June* 1860. Æsch. Choëph.; Demosth., 1st Phil.; Horace, 2nd B. of Sat.; Tacit. His., B. V.; Ovid's Fasti, B. II.; Homer, Il. XII.; Thucyd., former half of B. I.; Virgil, Georg., I.; Juv. Sat. I. III., XIV., XV., XVI.; St. Luke, latter half (Greek); Plautus, Menæchmei; various Hebrew Psalms and portions of Bible; XXXIX. Articles. THIRD. *June* 1858 to *June* 1859. Homer, Odys. XXIV.; Herod., B. VII.; Aristoph., Acharn.; Terence, Phormio; Horace, Odes, B. IV.; Horace, Sat., B. II.; Sophocl., Œd. Col.; Cicero, Verr., Act 1.; Virgil, Georg., B. II.; St. Luke, former half (Greek); Epist. to Hebr. (Greek); various Hebrew Psalms and portions of Bible; XXXIX. Articles. FOURTH. *June* 1857 to *June* 1858. Demosth. Olynth. II.; Æschyl., Prometh.; Ovid's Fasti, B. I.; Livy, B. I.; Cicero, pro Archia; Homer, Iliad VI.; Soph. Philoct.; Thucyd., B. II.; Virg., Æn. III.; Juvenal, 4 Satires; Persius, 4 Sat.; St. Matth., former half (Greek); various Hebrew Psalms and portions of Bible; XXXIX. Articles. FIFTH. *June* 1856 to *June* 1857. Tacit., Ann., B. I.; Demosth., Phil., I.; Virg., Georg. III., and Virg., Æneid, VII.; Soph., Trach.; Homer, Iliad, XX. and XII.; Hor., Ep., B. II.; Hor., Satires, B. II.; Hor., Odes, B. II. and IV.; Æsch., Agam., 1—1100; Thuc., B. I., former half; 1st Epist. of St. Peter (Greek); various Hebrew Psalms and portions of the Bible; XXXIX. Articles.	*In hearing the Head Form.* Before commencing any book or portion of a book, the Head Master devotes one lesson to a sort of dictated lecture, of which the boys take notes. In this he puts the Form in possession of the history of the author, or of the period, or of the plot of the play, or of the controversies, critical or other, relating to the subject. This, however, he does somewhat in the guise of answers to questions addressed to various boys in the Form, in order to keep up their attention. They have, of course, been desired to prepare to be questioned on the matter in hand; but, as their answers are frequently faulty or imperfect, they are corrected by the Head Master, and thrown into the shape of a running comment. In an ordinary lesson, perhaps, three or four boys are called up in succession to construe. For all great errors, the Head Master appeals to some other boy for correction. If the matter is one on which he desires to call forth thought or ingenuity, or to prove who has read the lesson carefully, he appeals to the whole Form. As the construing proceeds, he insists upon exact, yet elegant and spirited rendering; asks questions on, and directs attention to, niceties of tense, case, preposition, or other particle; demands or gives elucidations of etymological affinities, of analogies of language, of idioms (whether of the author or of the language generally in which he is writing); of constructions, of historical, mythological, geographical, and antiquarian allusions; requires parallel passages from Greek, Latin, or English writers, or places in them where such and such a word or construction occurs; frequently amends the boys' rendering by a version of his own; notices various readings or remarkable emendations, but always insists on the hardest reading being construed. If a poet, such as Juvenal, or Persius, or Catullus, or Aristophanes, is being construed, he often, at the conclusion of the lesson, reads to the Form a good poetical version, as those of Gifford, or Theodore Martin, or Mitchell, pointing out its successful or unsuccessful renderings. In reading the Greek or Roman historians, he takes great pains to make the boys understand the political constitutions or character of the nations under review; distinguishes their mythical and their trustworthy annals; notices remarkable migrations, ethnological affinities, and similar topics, and yet is as careful in observing the philological points connected with the book as he is in reading a poet. He insists upon references being made backwards and forwards in the same author, and to other authors; and in history cites English authors who have gone over the same ground, quoting parallels from modern history. He is very anxious to make boys go to the root of the language, and is continually causing them to refer to their lexicons and dictionaries, and grammars, in his presence, during the lesson. And he is not contented unless they so render their author as to make good and classical English of him; hence he frequently bids them, after construing, read off the Greek or Latin into English, helping them to happy expressions when necessary. Copious notes are taken during the whole lesson, and anything which has been remarked upon once is liable to be demanded of the whole Form again. If he sees boys careless, or indolent in taking notes, he asks for their book, examines it, and desires more care. No places are taken at lessons. The places of the *eight* Monitors are fixed. Those of the *eight* Prompters are fixed for a year only. Those of the Upper Sixth are fixed for half a year only. Both the Christmas and the June examinations vary the places of the Upper Sixth. The June examination varies the places of the Prompters. At the end of each half year, the examination turns mainly on the work done in it, and *marks* express the relative proficiency of all, whether their places vary or no. The classical examination includes Greek prose; Greek iambics, or other verse; Latin prose, narrative, epistolary, oratorical, or philosophical; Latin hexameters, elegiacs, lyrics, and an epigram; Latin and Greek books for translation; a philological paper, and a divinity and history paper, including geography, archæology, &c. I scarcely know where else to notice what I consider an important element in our system, our Public Speeches, which I find a most valuable means of bringing out boys' talents and character, and of giving them ease and self-possession. I superintend the preparation for these myself, aided, of course, by the French master in his own language. The eight Monitors are the only Speakers. The speeches take place twice a year, at Christmas, and in June, when the Prizes are distributed.	I cannot say exactly what authors or how much of them have been committed to memory during the year, from June 1860 to June 1861; but I have four classical *parts* in each week, and as I generally take these *parts* from the books construed during the year, I probably had some Æschylus (Agam.), some Lucretius (B. I.), some Virgil (Eclogues), some Persius, and some Cicero (de Senect.), committed to memory; about 30 lines of a poet, or a moderate chapter in a prose author, constitutes what we call a *part*, *i.e.* a lesson learnt by heart over-night, and repeated by the boys, two and two together, directly after prayers. I frequently select a remarkable passage of Greek or Latin prose for a *part*, or desire some piece of Greek or Latin prose, or of Greek verse, which I have myself corrected, to be written out fair, and said for *part* the next morning. The boys are expected to be able to construe the *part*, as well as to say it by heart, and they construe it in class, as soon as the saying by heart is over. The XXXIX. Articles were said by heart in the course of the year, and the boys were questioned in the matter of them.

MERCHANT TAYLORS'. TABLE C.—MERCHANT TAYLORS'.

6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.	7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.	8. Other Subjects of Instruction forming Part of the regular Work of the Form and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
Here, again, I cannot be exact, but as the eighth Book of Herodotus and the 1st Cat. oration of Cicero, and the Gospel of St. Mark, were portions of the school work, an exact acquaintance with their substance and matter, and a great deal of illustrative matter attaching to them, and derived from history, and comments written in English, were required at the examinations. We read our books very carefully, and many of the boys are singularly apt at quotation. The substance and matter of comments given on the XXXIX. Articles, and of the essays on things classical or sacred written during the year or half year, as the case may be, were also required at the examinations. At June, especially, an acquaintance with the reigns of Elizabeth and James the First was demanded. This included familiarity with the Church events of that period, with the progress of literature, and with biographical, geographical, and other points. N.B.—The boys in the Head Form feel, and are meant to feel, that what they do in school is intended to teach them how to read for and by themselves; and many of the more industrious do a great deal of private work. I have, known, for instance, one boy get up the Second Book of Thucydides; another, two or three Books of Horace's Odes, another the whole of Persius, another a play of Æschylus or Sophocles, and others even more in the course of the half year, without any compulsion. Others have even looked forward to the East India examination while at school, and entered upon a systematic course of English literature with a view to it, without intermitting their classical studies.	ORIGINAL. English. | Latin. | Greek. | Modern Foreign. Under this head, also, I can only speak generally. I seldom require original compositions in verse, except occasionally a poem in Latin hexameters; and I do not very often set original Latin or Greek essays. But English essays, or biographies, or descriptions of historical periods, are set, ordinarily, every week If set on Saturday, such essay is on a subject connected with Divinity; for instance, a question for which Paley's Evidences, or a sermon of Bp. Joseph Butler, or a particular portion of the Analogy, must be consulted (the exact portion being indicated to the Form). Or, again, an essay on the Inspiration of Scripture, or a biography of St. Paul, or a life of Abraham, or an account of the typical character of the Law, is set for an exercise. If set in the week, or for the August holidays, a classical or modern history subject is selected—as the "The Influence of the older comedy at Athens, and its equivalent at Rome, or in the present day," or the examination of some particular tragedy, in the light of Aristotle's definition of τραγωδία, or "the character of Cleon compared with that of some noted person in English or French history," and the like. TRANSLATION. English. | Latin. | Greek. | Modern Foreign. As for translations from English into Latin or Greek, I generally have four in the course of each week. My usual practice is to have four exercises of the same kind in succession. Boys thus make greater progress, and I am better able to mark it. I devote,— *e.g.* One week to Greek prose. Another to Greek verse, generally Trag., Iamb., Trim. Another to Latin hexameters. Another to Latin elegiacs. Another to Latin prose. Varying, however, the hexameters and elegiacs, with lyrics; viz., alcaics, sapphics, and imitations of some of the metres in the Epodes and in Catullus; and Greek iambics, with Greek hexam. This order is broken in upon frequently by other matters, such as translations from Greek or Latin prose into English prose; or renderings of an Ode of Horace or of Catullus, or of a Greek chorus into English verse; or by a philological paper; or an English essay on an historical subject. (For information as to composition in Modern Foreign Languages, see Column 9.)	I have explained the nature of the Mathematical work, by a list of the subjects taught in the several classes, and by a description of the manner in which the examination is made, and the results of it set forth. I forward to the Commissioners one or two sets of the examination papers in Mathematics. I also forward a set of the examination papers in Arithmetic, which will show how we conduct that part of our system. The specimen of our June paper will show how we reward proficiency in mathematics, arithmetic, writing, and writing from dictation. But, as I have said already, boys are arranged for these afternoon subjects, and for Drawing, quite irrespectively of their morning places. Therefore, information on these points does not properly belong to this table, which treats of the regular work of the morning Forms only. In Table B. classical proficiency is compared with proficiency in other subjects.	The French classes are formed on the basis of the Classical or morning Forms; therefore, though I have said something about the French examination already, I give a sketch of the existing system of French teaching, from the Lower Division to the Head Form, both inclusive. *Class of the Lower Division Form.* Pronunciation, elementary reading, grammatical rules and exercises on the noun, article, adjective, and pronoun, conjugation of auxiliary verbs, learning by heart introductory lessons of the "Every Day French Talk." *Class of the Upper Division Form.* Reading and translation from the "Prosateurs Français." Grammatical exercises on the auxiliary verbs, and the first and second conjugation of regular verbs, with repetition of the former part of the grammar. Conjugation of specimens of regular verbs. Learning by heart 15 pages from the 1st part of the "Every Day French Talk." *Class of the 4th and Lower 5th Forms.* Reading and translation from the "Prosateurs Français." Grammatical exercises on the regular, reflective, and impersonal verbs, with repetition of former parts; conjugation of the same. Learning by heart the whole of the 1st part of the "Every Day French Talk." *Class of the Upper Fifth Form.* Reading and translation from the "Prosateurs Français." Grammatical exercises on the regular verbs, the adverbs, the prepositions, the conjunctions, and the interjections. Conjugation of all irregular verbs. Learning by heart the 2nd and 4th parts of the "Every Day French Talk." *Class of the Sixth Form.* Reading and translation from the "Modèles de Poésie," with questions (asked in French) on any part of the lesson. Rules and exercises on the syntax of the noun, article, adjective, and pronoun. Learning by heart the 3rd and 4th parts of the "Every Day French Talk." *Class of the Head Form.* Reading and translation from the "Modèles de Poésie;" French conversation and dictation. Learning by heart the 5th part (selection of idioms and proverbs) of the "Every Day French Talk." Rules and exercises on the syntax of the verb, participle, &c. Translating once a week into French one page of "Le Brun's materials for translating English into French." "Histoire de France" recommended for private reading. N.B.—In every French class each boy brings up a written exercise once a week, which is corrected by the Master, and remarked upon.

MERCHANT TAYLORS'.—TABLE C.

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *viva voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Sixth Form, 26 Boys. The Head Master's Assistant, Rev. C. Crowden, M.A. Number of Boys from the Form who have left the School during the same Year, 11.	Bythner's Hebrew Grammar, (*Dr. Hessey*); Bythner's Lyra Prophetica; Hebrew Psalter; History and Doctrine of XXXIX. Articles, (given in the form of dictated lectures from notes prepared by the Head Master). Horace, Cicero, Livy, Homer's Iliad, Thucydides, Sophocles } No particular editions are enforced. Books used in the lower Forms which are also used in the 6th; viz., the Student's History of Greece (Dr. Smith); The Student's History of Rome, (Dr. Liddell); The Student's Hume's History of England; Wordsworth's Greek Grammar; King Edward the Sixth's Latin Grammar; Beatson's Greek Verse Exercises. Chapman's Every Day French Talk; Delille's French Grammar; Modèles de Poésie; Delille's Prosateurs Français; Spiers' School Dictionary. The Sixth Form constitutes a French Class by itself.	Smith's smaller Dictionary of Antiquities; Smith's smaller Dictionary of Biography and Geography; Bishop S. Butler's Ancient Atlas; Bishop S. Butler's Modern Atlas; Bishop S. Butler's Modern and Ancient Geography. *Jelf's* Kühner's Greek Grammar; *Schmitz's* Zumpt's Latin Grammar; Key's Latin Grammar; Key's Alphabet; Max Müller's Survey of Languages; Max Müller's Lectures on the Science of Languages; Donaldson's Greek Theatre; Dean Trench on "The Study of Words." The books above the line are in the possession of each boy. The others are constantly referred to by the Master, many of them forming the basis of lectures given upon the particular subjects of which they treat. Standard Maps are in the room.	*June* 1860 *to Dec.* 1860. Homer's Iliad, Book II.; Sophocles Œd. Col. 799 lines; Thuc. I., i. to xxvii.; Horace, Epistles, Book I.; Horace, Odes, III., i. to xvi.; Virgil, Æneid, VIII., 1 to 519; Cicero de Amicitiâ, about 200 lines; the two Epistles of St. Peter. *Jan.* 1861 *to June* 1861. Sophocles, Antig. 780 lines; Herodotus Book VII., i. to xxxix; Horace, Satires, Book II.; Horace, Odes, III., 16 to end, and Carm. Sæc.; Livy, Book I., i. to xxiv.; the Epistle of St. James; 1 Cor. i. to vi.; Cicero de Amicitiâ.	The boys are arranged each day according to the merit of their respective exercises (*vide* D). The master then selects certain boys to construe and to explain historical, mythological, geographical, and antiquarian allusions. All errors are passed down the Form, and places taken accordingly. Attention is especially directed to the force and meaning of the moods and tenses, of the particles, &c. Peculiarities in the construction of sentences are noticed, the etymology and history of words traced, parallel passages quoted both for words and sentiment. Such additions are made to the answers of the boys, as the Master deems necessary. During the lesson each boy takes notes. The note-books are occasionally examined by the Master, the errors pointed out, and corrected. At the conclusion of the lesson the position occupied by each boy is entered in a book kept for the purpose.	*June to Dec.* 1860. Sophocles, Œd. Col., about 250 lines; Horace, Odes, III., i. to xvi.; Cicero de Amicitia, about 200 lines; Articles I. to XV. *Jan.* 1861 *to June* 1861. Sophocles, Antig., about 250 lines; Horace, Odes, III., xvi. to end, and Carm. Sæc.; Cicero de Amicitiâ, about 200 lines; Articles XV. to XXIX.	Herodotus, VI. to VIII.; Thucydides, I.; Livy, XXI. to end; Dr. Smith's History of Greece, c. i. to v., and xv. to xxvii.; Dr. Liddell's History of Rome, c. xxviii. to end.
Upper Fifth Form, 31 Boys. Rev. J. A. L. Airey, M.A. Number of Boys from the Form who have left the School during the same Year, 13.	*Heyne's* Homer; *Major's* Hecuba; *Valpy's* Virgil; *Merivale's* Sallust; *Valpy's* Greek Testament; Nicholls' Help to reading the Bible; King Edward VIth's Latin Grammar; Wordsworth's Greek Grammar; Arnold's Latin Prose Composition, Part I.; Arnold's Greek Prose Composition, Part I.; Beatson's Greek Iambic Exercises; Delille's French Grammar; Delille's Répertoire Française; Chapman's French Talk; History of Greece (Smith); History of Rome (Liddell); Student's Hume; Butler's Ancient and Modern Geography.* The French Books are mentioned as part of the work of the *Form*. This Form constitutes one French Class.	I.—*Common to the Form.* Smith's Dictionary of Antiquities; Smith's Greek and Roman Biography; Liddell and Scott's Greek Lexicon (larger); Andrews' Latin Dictionary; Madvig's Greek Syntax; Bos's Grecian Antiquities; Jelf's Greek Grammar; Arnold's Greek Synonyms; Young's English-Greek Lexicon. II.—*Possessed by each boy.* Smith's smaller Latin Dictionary; Liddell and Scott's Greek Lexicon (abridged); Smith's smaller Classical Dictionary; Carey's Latin Gradus; Butler's Ancient and Modern Atlas. III.—*School Property.* Standard Maps of Modern and Ancient Geography.	Iliad, Books XIX., XX., 1 to 109; Hecuba, 714 to end, and 1 to 651; Virgil, Æn. VIII., IX., 1 to 158; Sallust, Jug., XXXII. to LXXXVIII.; Greek Testament, selections.	"Part,"—(or lesson committed to memory over-night) from Grammar or Virgil,—heard in class. Each boy required to repeat, and answer questions on some portion. *Construing lesson*, (prepared generally in school, whilst exercises, done over-night, are being looked over and corrected,) said in class. Some boy is selected to construe the first sentence or paragraph, answer questions of parsing, rules from grammar, Propria quæ maribus, As in præsenti, Syntax, and Prosody, explain peculiarities of construction, and allusions to real or mythical history, geography, chronology, &c. Other boys are in like manner selected, till the lesson is finished. Places are taken, and the place of each boy in the Form is registered after every such lesson. This registry of places is compounded with the result of each half-yearly examination in books and composition, to determine the remove of boys to a higher Form. *Lessons in History* read in class; books then closed and questions asked; and places taken, as in all other class lessons. *Lessons in Geography*, ancient and modern, learnt from the school text-books, heard in class, places taken, and results registered as in construing lessons.	Virgil, about 600 lines; Latin and Greek Grammars, the whole each half-year.	Corrected translation in Latin prose and verse, committed to memory twice a week. Also, during the year, the 2nd and 3rd parts of the Greek History, the whole of Butler's Modern Geography, with tables of Chronological events; and the 3rd part of Nicholls' Help, are read through at least once, and questions asked in class on Mondays and Thursdays. (*See* Column 4).
Lower Fifth Form, 18 Boys. Rev. J. A. L. Airey, M.A. Number of Boys from the Form who have left the School during the same Year, 8.	*Heyne's* Homer; *Valpy's* Virgil; *Valpy's* Greek Testament; Xenophon (Anabasis); Cæsar, de Bello Civili; Nicholls' Help to the Bible; King Edward VIth's Latin Grammar; Wordsworth's Greek Grammar; Arnold's Latin Prose Composition, part I.; Delille's French Grammar; Delille's Prosateurs Français; Chapman's French Talk; History of Greece (Smith); History of Rome (Liddell's); Student's Hume; Butler's Ancient and Modern Geography. The Lower Fifth and Fourth Forms are (for French) taught together.	Smith's smaller Latin Dictionary; Liddell and Scott's Greek Lexicon (abridged); Smith's smaller Classical Dictionary; Carey's Latin Gradus; Butler's Ancient and Modern Atlas. Standard Maps of Modern and Ancient Geography.	Iliad, IX., 431 to end, and X., 1. to 381; Xenophon, Book III., c. v., and Book IV.; Virgil, Æn. VI., 628 to end, and VII., 1 to 248; Cæsar, de Bello Gallico, Book I., c. liv. to end, and Book II. Greek Testament, selections from the Gospels.	The same as for Upper Fifth Form.	Virgil, about 400 lines; Latin and Greek Grammars, the whole each half-year.	Corrected translations, in Latin prose and verse, committed to memory twice a week. Also, during the year, the 2nd and 3rd parts of the Greek History, the whole of Butler's Modern Geography, with tables of chronological events, and the 3rd part of Nicholl's Help, are read through at least once, and questions asked in class on Mondays and Thursdays. (*See* Column 4).

* The Editions specified are those usually given out, but no particular edition is absolutely demanded, except in the case of Major's Hecuba.

TABLE C.—MERCHANT TAYLORS'.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction, forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
ORIGINAL.						
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	None.	None.	See Head Master's Report.		
Prose.	Occasional essays, about 10 in the course of the year.	None.	None.	Ditto.		
TRANSLATION.					Answered in Head Master's General Report.	
Verse.	6 copies, about 200 lines.	52 copies, about 832 lines.	30 copies, about 450 lines.	Ditto.		
Prose.	Occasional translations from Latin and Greek authors.	35 copies, about 875 lines.	30 copies, about 600 lines.	Ditto.		
The exercises are chiefly set from Holden's Fol. Silv. and Fol. Cent.; Beatson's Greek Iambics; Shakspeare, &c.						
TRANSLATION.*						
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	One copy of 8 to 12 lines of elegiacs or hexameters each week, from some English poet.	Beatson's Iambic Exercises, one copy each week, done in school.	See Head Master's Report.	Answered in Head Master's General Report.	
Prose.	Occasional translations from Greek and Latin authors into English prose.	Two exercises each week, one from Arnold's Latin Prose, the other from some English author.	Arnold's Greek prose exercises, one copy each week, done in school, and called a "challenge"; also the exercise from Huntingford's Introduction, Part III.	Ditto.		
TRANSLATION.						
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	One copy of elegiacs or hexameters, (from 6 to 8 lines) each week, from some English poet.	Exercises in Greek accentuation before introduction to Greek verse.	See Head Master's Report.	Answered in Head Master's General Report.	
Prose.	Occasional translations from Greek and Latin authors into English prose.	Two exercises each week, one from Arnold's Latin Prose, the other from some English author.	One copy from Huntingford's Introduction each week.	Ditto.		

* No original composition is done below the Sixth Form.

MERCHANT TAYLORS'.—TABLE C.

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Fourth Form, 23 Boys. Rev. R. Whittington, M.A. Number of Boys from the Form who have left the School during the same Year, 2.	Valpy's Greek Testament; Dalzel's Analecta Græca Minora; King Edward VI.'s Latin Grammar; Bishop S. Butler's Ancient and Modern Geography; Student's History of Greece; Wordsworth's Greek Grammar; Huntingford's Greek Prose Exercises; Nicholl's Help to the Bible (S.P.C.K.); Cæsar (*Dymock*); Arnold's Latin Prose Exercises, Part I.; *Heyne's* Homer; Ovid's Metamorphoses (*Eton*); Virgil *Valpy's edition; Mac Michael's* Xenophon's Anabasis; Arnold's First Verse Book; Delille's French Grammar; Chapman's French Talk; Delille's Prosateurs Français. The Lower Fifth and Fourth Forms are (for French) taught together.	Smith's smaller Latin Dictionary; Liddell and Scott's Greek Lexicon (abridged); Smith's smaller Classical Dictionary; Carey's Gradus; Bishop S. Butler's Ancient Atlas; Standard Maps of Ancient and Modern Geography.	Homer's Iliad, Book I., 220 lines; Xenophon, Anabasis, Book I., chap. viii. and ix.; Virgil, Æneid I., 300 lines; Cæsar de Bello Gallico, Book II.; Ovid's Met., 350 lines; Greek Testament, selections from the Gospels.	Part (or lesson committed to memory) from Ovid or Greek or Latin Grammar, prepared at home in the evening and repeated next morning, when each boy is required to repeat some portion, and answer questions arising out of such lesson. In construing lessons some boy, taken from any part of the Form, is called upon to translate a portion, and to answer questions of parsing, giving the rules for gender, &c., from the "Propria quæ maribus," As in Præsenti, Syntax, and Prosody; questions of history, geography, chronology, arising out of the lesson, are asked, not merely of the boy who is translating, but of other boys, without reference to order in the Form, that attention may be kept up throughout the Form. Places are taken, and the place of each boy entered into a registry after the lesson, or at least once a day, and the remove of boys into a higher Form is determined partly from this registry of daily places, and partly by the report of the half-yearly examination.	Ovid's Metamorphoses, about 350 lines, and each half year the whole of the Latin Grammar, and the Greek Grammar as far as the Syntax.	Corrected translation in Latin prose, and during the year the 1st Part of the Grecian History, with dates, and Ancient Geography with maps; also the 1st and 2nd Parts of Nicholls' Help to the Bible are read through in class, and questions asked.
Upper Division, 25 Boys. Rev. R. Whittington, M.A. Number of Boys from the Form who have left the School during the same Year, 4.	Valpy's Greek Testament; Dalzel's Analecta Græca Minora; King Edward VI.'s Latin Grammar; Bishop S. Butler's Ancient and Modern Geography; Student's History of Greece (Dr. Smith); Wordsworth's Greek Grammar; Huntingford's Greek Prose Exercises; Nicholls' Help to reading the Bible; Cæsar (*Dymock*); Arnold's Latin Prose Exercises, Part I., Ovid's Epistles, *Eton*; Hodgson's Latin Verse; Chapman's French Grammar; Chapman's French Talk. The Upper Division Form constitutes a French class by itself.	Smith's smaller Latin Dictionary; Liddell and Scott's Greek Lexicon (abridged); Smith's smaller Classical Dictionary; Carey's Gradus; Bishop S. Butler's Ancient Atlas; Standard Maps of Ancient and Modern Geography.	Cæsar de Bello Gallico, Book II.; Ovid's Epistles, 350 lines; Æsop's Fables in Analecta Græca Minora, 25 Fables; Greek Testament, selections from the Gospels.	Same as in Fourth Form.	Ovid's Epistles, about 350 lines, and each half year the whole of the Latin Grammar and the Greek Grammar, as far as the Syntax.	Corrected translation in Latin prose, and during the year the 1st Part of the Grecian History, with dates, and Ancient Geography with Maps; also the 1st and 2nd Parts of Nicholls' Help to the Bible are read through in class and questions asked.
Lower Division, 30 Boys. Rev. C. Scott, M.A. Number of Boys from the Form who have left the School during the same Year, 4.	Greek Testament; Wordsworth's Greek Grammar; Analecta Græca Minora; Huntingford's Greek Prose Exercises; Hodgson's Mythology for versification; Electa ex Ovidio et Tibullo, *Eton*; Ellis's Latin Exercises; Archdeacon Sinclair's Catechism; the Student's History of Rome, Liddell; Bishop Butler's Ancient and Modern Geography; King Edward VI.'s Latin Grammar; Chapman's French Grammar; Chapman's Every Day French Talk. The Lower Division Form constitutes a French class by itself.	Liddell and Scott's Greek Lexicon, abridged; Carey's Latin Gradus; English - Latin and Latin-English Dictionary; Classical Dictionary; Bishop Butler's Ancient Atlas; Standard Ancient and Modern Maps in the room where the Form is taught.	Ovid, 300 lines; Analecta Græca, 10 Fables each half year; Greek Testament, portions of the Gospels.	Part, or portion of grammar learnt the preceding evening, is said by each boy repeating a portion. All errors passed down the Form and places taken accordingly. After this lesson the order of the boys is registered. In correcting Huntingford's and Ellis's Exercises each boy takes another's exercise, and marks the mistakes at the master's dictation, and the boys' places are taken according to the number of mistakes. In construing lessons, each boy reads a small portion, if poetry, each boy scans a line, and then each boy construes a small portion or line. All errors are passed down the Form and places taken accordingly, After construing, questions are asked in parsing, proving, history, and mythology.	Ovid, 300 lines; portions of grammar; Sinclair's Catechism and Texts.	History of Rome; Ancient Geography.

TABLE C.—MERCHANT TAYLORS'.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
Translation.						
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	Arnold's Latin Verse composition, an exercise once a week, and also a challenge (*i.e.* an exercise done in school) once a week.	None.	See Head Master's Report.	Answered by the Head Master in his General Report.	
Prose.	None.	Arnold's Latin Prose, Part I., an exercise once a week, and also a translation into Latin from some English prose author once in each week.	An exercise, once a week, in Huntingford's Greek Prose.	Do.		
Translation.						
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	Hodgson's Latin Verse, an exercise of 6 verses twice in the week.	None.	See Head Master's Report.	Answered by the Head Master in his General Report.	
Prose.	None.	Arnold's Latin Prose, Part I., an exercise twice in each week.	An exercise in Huntingford's Greek Prose, prepared at home, once in each week, and also a challenge (*i.e.* an exercise prepared at school), once in each week.	Do.		
Translation.						
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	Hodgson's Mythology for versification, 300 lines, 75 exercises.	None.	See Head Master's Report.	Answered in Head Master's General Report.	
Prose.	None.	Ellis's Latin Exercises, Part II., from page 60 to the end, 45 exercises.	Huntingford's Greek Exercises, Part I., 45 exercises.	Do.		

MERCHANT TAYLORS'.—TABLE C.

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Third Form, 30 Boys. Rev. C. Scott, M.A. Number of Boys from the Form who have left the School during the same Year, 3.	Latin Catechism; Prayers and Psalms; Archdeacon Sinclair's Catechism; Bishop Butler's Ancient and Modern Geography; The Student's History of Rome (Liddell's); Church's Latin Prose Lessons; Ellis' Exercises; King Edward the Sixth's Latin Grammar.	English-Latin and Latin-English Dictionary; Carey's Latin Gradus; Bishop Butler's Ancient Atlas; Classical Dictionary. Standard Ancient and Modern Maps in the room where the Form is taught.	Church's Latin Prose Lessons; Latin Catechism; Prayers and Psalms.	Part or portion of grammar learnt the preceding evening is said, by each boy repeating a portion. All errors are passed down the Form and places taken accordingly. After this lesson the order of the boys is registered. The same as in the lower division in the construing lessons.	Portions of the Latin Grammar; Sinclair's Catechism and Text.	History of Rome; Ancient Geography.
Second Form, 27 Boys. Rev. A. J. Church, M.A. Number of Boys from the Form who have left the School during the same Year, 2.	Holy Bible; Book of Common Prayer; Bishop Trowers' History of England, S. P. C. K.; King Edward VI.'s Latin Grammar; Evangelia (Latinè); Church's Prose Latin Lessons; Henry's First Latin Book; Ellis' Exercises (*Arnold*).	Olding Butler's Geography and maps; Dictionary (Latin-English and English-Latin). Standard Modern Maps in the room where the Form is taught.	Eton Evangelia; 7 verses (on an average) of every Gospel that has occurred during the school year; Henry's 1st Latin Book (the Latin Exercises, 35-60); Church's Latin Prose Lessons, about 30 lessons. N.B.—The lessons 2 and 3 are gone through more than once in the year.	A boy in any part of the Form is set on to construe. A mistake is passed down the Form. Any boy correcting and able to finish the clause or sentence correctly takes the place. The Latin Syntax is quoted to illustrate constructions. The principal parts of verbs, the declension and genders of substantives, simple derivations, are asked. The "As in præsenti" and the "Propria quæ maribus" are quoted. Places are taken for all these things. Special importance is attached to the quotation of the Latin Syntax. General information, suggested by the names of places and persons that may occur, is given.	The "Propria quæ maribus," the "As in præsenti," and selected rules of the Latin Syntax (about 110 in number) are committed to memory. The Catechism is learnt.	The greater part of the Gospels, the Acts, and some part of the historical books of the Old Testament are read; questions are asked and information is given. Olding Butler's Geography is learnt. Questions are asked, the blank maps being used. The History of England (Bishop Trowers' S.P.C.K.) is read. Questions are asked.
First Form, 27 Boys. Rev. A. J. Church, M.A. Number of Boys from the Form who have left the School during the same Year, 3.	Holy Bible; Book of Common Prayer; Bishop Trowers' History of England (S.P.C.K.); King Edward VI.'s Latin Grammar; Ellis' Exercises (*Arnold*); Henry's First Latin Book.	Olding Butler's Geography and Maps. Standard Modern Maps in the room where the Form is taught.	Henry's 1st Latin Book (the Latin Exercises 1-35). These exercises are gone through more than once in the year, according to the changes that may take place in the Form.	The method of hearing this Form in their construing lessons, which are very simple, is the same as that pursued with the 2nd Form, with such differences as are rendered necessary by the tender age of the boys.	The "As in præsenti" and the "Propria quæ maribus" are learnt. The Catechism is learnt.	The Bible, the geography, and the history lessons are the same as in the Second Form.

HARROW.—TABLE C.

HARROW - - - - - -

Monitors and Sixth Form, Upper Division, 30 Boys. The Head Master.
Number of Boys from the Division who have left the School during the same Year, 22.

1. Authors or Books used (not being mere Books of Reference) with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
In the main the same as those enumerated by Mr. Harris for the Lower Division of Sixth Form 1; I may add, Vaughan's edition of Epistle to the Romans; Butler's Analogy; Plautus, Text of *Fleckeisen;* Lucretius, *Bernays Lachmann* and *Creech;* Guizot's English Revolution (English Translation); Aristophanes, *Holden.* Wilkins' Books on Composition are not used in this Form. In French the books used by both divisions of the Form are Masson's Introduction to French Literature, Barrau's Histoire de la Revolution Française; and in German, Schiller, Ermeler's Lesebuch, edited by *Heimann,* Heimann's Materials for translating English into German.	Same as those given for Lower Sixth.	N.B.—[The two Divisions of the Sixth Form do the same work in school, though not the same composition.] Same as given for Lower Sixth. I add only, for both Divisions of the Form, Aristophanes, latter part of *Nubes,* earlier part of *Aves;* in French, 100 pages of Barrau's Histoire de la Revolution Française; in German, Schiller's Maria Stuart.	At second school on Monday the boys bring in some classical book, without notes, as Demosthenes, Horace, Cicero, &c. I then refer them to one passage, or two short passages, which they are supposed never to have seen before. They are allowed half an hour for translating this passage, or these passages, into their MS. books; during the latter half of the hour I call upon them to read out their version of some portion of the passage, and mark them according to its merits. In this manner I am able to call up about 15 boys, taking care to test the different degrees of capacity and proficiency in the Form. With ordinary construing lessons, which are prepared before the boys come into school, I call upon first one boy and then another to read off into English, without taking the Greek or Latin words, some 10 or 12 or 20 lines of the book which for the week we are reading. If a mistake is made, I generally stop the boy at once, instead of waiting till he has concluded the passage. Questions of grammar, quotations, geography, historical illustration, &c. are passed from boy to boy, not necessarily in any fixed order, but so as to keep the whole Form on the alert. I scarcely ever impart any information till it has been proved that everybody in the Form requires it. I make a great point of teaching the less advanced boys through the best scholars of the Form. Some boys are understood to have a special gift for some particular point of excellence; one, for instance, for knowledge of grammar, another for elegance or terseness in rendering a clause, another for knowledge of history; and I always endeavour, as far as possible, to make these rather than myself the ultimate court of appeal. When a sentence is finished, corrections and improvements in rendering, as well as explanations of allusions and difficulties, are invited; but I seldom translate the whole of the passage myself, partly because it would consume time, and partly because the boys might become less attentive when first the passage is translated by one of themselves. In any one "school" I generally call up from five to seven boys; but this varies with the difficulty of the lesson; sometimes not more than two are put on. Every boy is marked for construing, and for the questions which he then answers or fails to answer; but he is not in general marked for answers to questions passed on to him from another. In marking, account is of course taken of style and fluency in translation as well as of accuracy. At fourth school on "whole school days" the boys bring in a written translation of the first 20 lines of the lesson. A considerable number of them, perhaps six or seven, are called upon to read out part of this translation. No places are taken in the Upper Sixth Form. Occasionally, however, I read out to the boys the marks which they have respectively received for composition done in the week, mentioning any exercises of peculiar merit, or any general defects in the treatment of a subject set for a Latin or English theme.	Greek verse, Sophocles, 502 lines; Latin verse, Virgil, 922 lines; Scripture, 13th and 15th chapters of 1st Epistle to Corinthians; 12th chapter of St. Luke; 14th, 15th, 16th (1–12) chapters of St. John. There is a Scripture repetition once a week consisting of 21 verses, 14 old and 7 new. A Greek verse repetition once a week, consisting of 48 lines, 32 old and 16 new. A Latin verse repetition twice a week, consisting of 60 lines, 40 old and 20 new. I may add that for the future, a portion of Horace's Odes, amounting to about 350 lines, will be said at the end of each school quarter, as part of the examination, so that a boy who has been in the Sixth Form for two years, will have said nearly the whole of the Odes by heart. This applies to both divisions of the Form. Boys who have a special gift for learning by heart are encouraged to learn large quantities of Greek or Latin; for example, one boy said to me at one time the whole of the Agamemnon of Æschylus. It seems worth while to mention these long repetitions, which, though voluntary and extra, are not very uncommon, and are rewarded by prizes; 1,000 lines of Greek, and 1,200 of Latin hexameters, are the minimum required. In French, about 300 lines of Molière's Misanthrope; each lesson about 10 lines. In German, about 400 lines from Schiller and various authors; each lesson about 10 lines.	About half of the First Part of Butler's Analogy; a considerable portion of Paley's Horæ Paulinæ; some Articles in Buttmann's Lexilogus; a large part of Guizot's History of the English Revolution; Arnold's History of Rome, the Second Punic War down to the Battle of Cannæ, Vol. III. Schiller's History of the Thirty Years' War, Guizot's English Revolution, Guizot's Cromwell, were the subjects prepared for examination during the holidays. Of these books only the English Revolution was read with me in school. About 12 pages were prepared for each lesson once a week. History of Greece, B.C. 490–301. This was not read in school, but was the subject of successive examinations (on paper) at the end of each school quarter. This year, in consequence of the school breaking up unexpectedly on one occasion, there were only two instead of three examinations; hence the amount of ancient history prepared is less by one-third than it would naturally have been. The examination paper on this subject is not set out of any particular book. The boys, however, are recommended to read Thirlwall and Grote.

HARROW.

TABLE C.—HARROW.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
	ORIGINAL.					
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	Nine copies of not less than 25 lines, or seven stanzas, if lyrics.	One copy of 20 lines for monitors; 16 lines for lower members of Form. This is the compulsory minimum.	None.		
Prose.	Seven themes of not less than 60 lines.	Eight themes of not less than 40 lines.	None.	One French theme.	None.	None.
	TRANSLATION.					
Verse.	Two copies from Aristophanes and Virgil.	14 copies of not less than 25 lines from Cowper, Campbell, Keats, Wordsworth, M. Arnold, Dryden, Hood, Byron, or seven stanzas, if lyrics.	14 copies of not less than 20 lines for monitors, not less than 16 lines for others. From Shakspeare, Plautus, Schiller; almost always from Shakspeare.	In German, one copy from Uhland, 64 lines.		
Prose.	None.	Nine translations from Thirlwall, Merivale, Niebuhr, Burke, Arnold. Length of passage variable; about 30 lines.	Six translations from Arnold, Burke, Tacitus, Curran. Length of passage variable, about 25 lines.	In French, nearly 35 exercises, from English into French, of about 30 lines each; and the same number from French into English, of about 40 lines each. In German, about 40 exercises from English into German, of from 15 to 20 lines each.		

HARROW.—TABLE C.

	1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Sixth Form, Lower Division, 31 Boys. Mr. G. F. Harris. Number of Boys from the Division who have left the School during the same Year, 15.	Greek Testament, *Alford;* Paley's Horæ Paulinæ; Homer's Odyssey, *Löwe;* Herodotus, *Blakesley* or *Gaisford;* Thucydides, *Poppo;* Demosthenes, c. Meidiam, *Buttmann;* Sophocles, *Linwood;* Tacitus, *Carson's text;* Tacitus, Ruperti Comment.; Cicero, Epp. ad Attic. *Tauchnitz;* Cicero, Oliveti Comment.; Virgil, *Wagner* or *Forbiger;* various texts; Plautus, *Lindemann;* Buttmann's Lexilogus; History of Rome, Liddell; History of Rome, Arnold; History of Greece, Smith; History of Greece, Thirlwall; Latin Prose Exercises, Wilkins; Latin Prose, Kennedy's Materials; Greek Prose Exercises, Wilkins; Greek Verse, Kennedy's Palæstra; Greek Grammar, Wordsworth; Latin Grammar, Edward VI. In French and German the same books as the Upper Sixth.	Smith's Dictionary of Antiquities; Smith's Biographical Dictionary; Liddell and Scott's Greek Lexicon; Smith's or Andrewes' Latin Dictionary; Gradus, Quicherat, or Yonge; Harrow Atlases, Ancient and Modern; Riddle's English - Latin Dictionary; Yonge's English-Greek Dictionary.	Greek Testament, 1st and 2nd Epistle to Corinthians; Greek Prose, Herodotus II., c. i. to xcviii., Thucydides III., c. i., to lxxxiv., Demosthenes c. Meidiam; Greek Verse, Sophocles Electra, Sophocles Ædipus Rex, Homer Odyssey, XX., XXI.; Latin Prose, Tacitus Annales, III., and IV., to c. xxxiii.; Cicero Epp. to Atticus, Lib. VII.; Latin Verse, Virgil, Æn. VI.; Plauti Captivi; Trinummus. French and German, same as Upper Sixth.	The construing lessons of each term, exclusive of the Greek Testament, consist of two Greek (one prose and one verse) and two Latin (one prose and one verse) subjects; each of which is read in turn for one whole week in each month. With each construing lesson at the fourth school, is brought up a translation, copied into a MS. book by each boy; this is read over and corrected *vivâ voce*, and these MS. books are looked over once in each week. After the reading of the translations, a boy is called up with about eight or ten lines of the lesson. When he has construed this I go over the same very carefully, and then question the same boy in such matters as arise from the passage, whether grammar, history, antiquities, geography, or the like. Questions are passed down, if not answered, but places are not taken. Each boy, after his part is done, is marked according to the excellence shown in his performance. All the boys write down, in common-place books, notes upon each lesson, and these are looked over once a week. Each boy is called upon to construe at least twice in the week. At the end of each month the marks obtained under the heads—1, Construing; 2, Composition; 3, Repetitions and History; 4, Divinity and Scripture Repetitions are added together and the places are changed according to the result, which is publicly announced to the Form on the Monday after the end of each month. Editions containing the *text* of the author alone are brought into school.	Verse. Greek, Sophocles, 384 lines; Latin, Virgil, 540 lines. Prose. Greek, Demosthenes, 140 lines; Cicero, 480 lines. Scripture. Collect, Epistle and Gospel of each Sunday. Each ordinary repetition is said thrice; the two previous lessons being repeated with each new one. French and German, same as Upper Sixth.	About half Paley's Horæ Paulinæ; All Guizot's History of the English Revolution; History of Greece B.C. 490 to 301.
Fifth Form, First Division, 35 Boys. Mr. B. H. Drury. Number of Boys from the Division who have left the School during the same Year, 11.	English Version of Old Testament; Greek Testament; Homer's Iliad; Demosthenes, Public Orations; Æschylus; Livy; Horace; Virgil; Wordsworth's Greek Grammar; Tiarks' German Grammar; Ermeler's Lesebuch; Delille's French Grammar; Choix de Narrations. Texts only, in all cases, allowed in school.	No uniformity is required in books of reference. The choice of them is mainly left to the boy's private tutor.	St. John's Gospel, chap. x. to end; Acts of the Apostles, chaps. i. to xii; Demosthenes de Coronâ; Homer's Iliad, Books XIII., XIV., XV.; Æschylus, Septem contra Thebas, and Persæ, 1 to 501; Horace's Satires, Book I.; Ovid's Fasti, part of Book V.; Virgil, Georgic IV., Æneid, XII., 1 to 553; Livy, Book XXV. (latter half), and Book XXVI.	About 12 boys are called up to construe and parse in each lesson. All the boys during the lesson take notes of anything worth writing in their common-place books. Questions arising out of the lesson, in grammar, history, geography, or antiquities, are asked of the boys called up, and if they cannot answer are passed about (in no fixed order). Generally speaking, I give the information only when none of the boys supply it.	Virgil, 4th Georgic and 450 lines of 12th Æneid; Horace, 2nd Book of Odes by about half the remove; Greek Grammar, various parts; parts of various German Authors, about 300 lines; parts of various French writers in Choix de Narrations, about 240 lines.	Joshua, Judges, Ruth, Samuel I., II., Kings I. II., Chronicles II.; Butler's Geography, Asia Minor, Africa, the East; Smith's History of Greece (Peace of Nicias to 301 B.C.); Liddell's History of Rome (early history to 366 B.C.); History of England (Student's Hume), from the Wars of the Roses to the battle of Waterloo.

TABLE C.—HARROW.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
ORIGINAL.					None.	None.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None	312 lines, 12 exercises of 26 lines each.	None.	None.		
Prose.	400 lines, *i.e.*, one English theme each month.	280 lines, *i.e.*, one Latin theme each month.	None.	Same as Upper Sixth.		
TRANSLATION.						
Verse.	None.	468 lines from various English authors; Milton, Thomson, Macaulay, Moore, W. Scott, &c., &c.	182 lines generally from Kennedy's Palæstra.	Same as Upper Sixth.		
Prose.	About 1,560 lines, being a translation of about 20 lines of a previous lesson done for three evenings in each week.	About 1,130 lines, chiefly from Wilkins'LatinProse,and Kennedy'smaterials for Latin prose, 24 lines each exercise.	About 750 lines, chiefly from Wilkins' Greek prose exercises, 24 lines each exercise.	Same as Upper Sixth.		
ORIGINAL.					None.	None.
	English.	Latin.	Greek.	Modern Foreign.

Prose.	8 copies, about 50 lines each.	8 copies, about 28 lines each.	None.	None.		
TRANSLATION.						
Verse.	Occasionally at examinations.	30 copies, about 24 lines each.	15 copies of 12 lines from middle portion of Kennedy's Palæstra Musarum; 35 copies of 4 lines each from earlier part of same book.	None.		
Prose.	Constantly at examinations, and frequently during the quarter.	57 copies, about, variable in length.	30 copies, about, variable in length.	Tiarks' German Exercises; Delille's French Exercises.		

HARROW.—TABLE C.

	1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Book used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *viva voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Fifth Form, 2nd Division, 36 Boys. Mr. F. Rendall. Number of Boys from the Division who have left the School during the same Year, 14.	Greek Testament; Homer's Iliad; Æschylus; Demosthenes; Livy; Virgil; Horace; Ovid's Fasti. The text alone of these authors is used in school; there is no rule as to the editions used out of school in preparing them.	Dictionaries; Lexicon; Gradus, Greek and Latin; Grammars; Kennedy's materials for Latin Prose; Wilkins' Greek Exercises; Smith's Dictionary of Antiquities; Smith's Classical Dictionary; Harrow School Atlas (ancient); Harrow School Atlas (modern). Beatson's Greek Iambics; Euclid; Algebra or Arithmetic (Colenso's); French or German Reading Book.	Gospel of St. John, c. viii. to end; Acts of Apostles, c. xiii.; Homer, Iliad, XIII., 402 to end; XIV., XVI., 505; Æsch., Sept. c. Theb. Persæ, 1 to 554; Demosthenes de Cor. (*P. Reiski*), 284 to end; Demosthenes, Olynth. I.; Livy, XXV., s. 22 to end; XXVII., s. 40; Virgil, Georg., IV.; Virgil, Æneid, XII., 1 to 534; Horace, Sat., I., II., i, ii; Ovid, Fasti, v.; German Reading Book, 30 pages; Choix de Narrations.	Boys are selected at discretion to construe a short passage after reading it in the original; they are then questioned in any points of history, geography, grammar, or etymology that present themselves in the passage; from 10 to 16 boys are so questioned fully; chance questions are also put to the whole set from time to time, the master giving always the correct construing or answer subsequently.	Portions of Livy, Virgil, Horace, Ovid. About 50 lines a week compulsorily and 50 more voluntarily by some of the most industrious and able. About 240 lines at the examination at the end of each term. Portions of French and German authors; 100 lines each school term of German and 80 of French.	Old Testament, Joshua - Chronicles (incl.); History of England (Student's Hume) A.D. 1483 to 1788; History of Rome (Liddell), down to B.C. 367; History of Greece (Smith), B.C. 421–387.
Fifth Form, Third Division, 33 Boys. Mr. E. H. Vaughan. Number of Boys from the Division who have left the School during the same Year, 8.	Homer (text); Æschylus (*Paley's text*); Xenophon's Hellenics (text); Virgil (text); Livy (text); Ovid's Fasti (*Paley's*); Beatson's Greek Iambics; Greek Testament (text); Wordsworth's Greek Grammar; Dr. Wordsworth's Latin Grammar; Dr. Smith's History of Greece; Liddell's History of Rome; Smith's Student's Hume; Butler's Ancient and Modern Geography; Kennedy's Curriculum, Latin Prose. *French:*—Delille's French Grammar and Exercises; Choix de Narrations (Masson). *German.*—Ermeler's Lesebuch; Tiarks' Grammar and Exercises. Colenso's Algebra; Colenso's Arithmetic; Euclid. Natural Sciences, a voluntary examination in a given subject each term.	Atlas, Ancient and Modern, generally Harrow Atlas; Smith's Small Classical Dictionary and Antiquities generally used.	Homer's Iliad, XIII., 402-768, XIV., 1-432, XV., 1-629. Horace, Od. III. Æschylus, Sept. c. Theb.; (nearly the whole); Æschylus, Persæ, 1 to 526; Virgil, Georgics, IV.; Æneid, XII. (1 to 553); Livy, XXV. (about half) and XXVI. (about 40 chapters); Greek Testament, Gospel of St. John (latter part); Acts of the Apostles, c. i. to xii. inclusive; German, Ermeler's Lesebuch, about 20 pages; French, Choix de Narrations, about 12 pages (prose or poetry) each term. They are most of them in this division beginners in German.	Boys (often as many as 10 each lesson) called upon to construe 4 or 5 lines each. Questions in parsing asked generally, and general questions relating to the lesson. Marks given for construing, and also for questions and parsing. These marks thus gained, together with others for repetition, maps, geography, history, composition, &c., are added up every fortnight, and the Form re-arranged accordingly. Places are not taken.	Old Testament repetition (the Prophets or Proverbs) from 10 to 15 verses a week; Virgil, Georgic, IV. 1-148; Horace, Od. III., about 7 stanzas being learnt new each lesson; Greek Grammar, different parts. The large print by heart, the small print the substance only. I have not preserved an accurate account of the amount of the repetitions done during the year.	Holy Scriptures, Old Testament, Joshua, Judges, Ruth, Samuel, I., II.; Kings I., II.; Chronicles, I., II.; Smith's Greece, Peloponesian war to the death of Alexander; Liddell's Rome, beginning to the end of Book II.; Student's Hume, from the wars of the Roses to the battle of Waterloo. This has been done during the three vacations.
Fifth Form, Fourth Division, 35 or 34 Boys. Mr. T. H. Steel. Number of Boys from the Division who have left the School during the same Year, 10.	Homer, any good text; Euripides, *Paley's text*; Livy, any good text; Ovid's Fasti, any good text; Virgil, any good text; Beatson's Greek Iambics; Greek Testament, any good text; Bishop Wordsworth's Greek Grammar; Dr. Wordsworth's Latin Grammar; Smith's History of Greece; Liddell's History of Rome; Smith's Student's Hume; Oxenham's Latin Elegiacs; Wilkins' Latin Lyrics; Kennedy's Curriculum; Wilkins' Greek Prose; French Grammar, Delille's; Choix de Narration, Masson; Colenso's Arithmetic; Colenso's Algebra; Colenso's or Potts's Euclid; Natural Science, voluntary, a different subject each term.	Smith's Small Class. Dictionary; Smith's Dictionary of Antiquities; Atlas, Ancient and Modern, chiefly Harrow Atlas.	Homer, Iliad, Books VIII. and IX.; Euripides, Bacch., 660 to end; Euripides, Electra, all; Livy, XXV., c. xxviii. to end; and XXVI., c. i to xl, inclusive; Ovid's Fasti, Book V.; Virgil, Georgic IV. and Æneid, XII., verses 1 to 553; Greek Testament, Acts, chapters i. to xx.; German, Ermeler's Lesebuch, about 20 pages; French, Choix de Narrations, about 12 pages, prose or poetry.	About 8 or 9 boys are called upon in each lesson; these construe and parse about 4 or 5 lines each, and are asked collateral questions referring to history, geography, mythology, &c. Questions that are missed are passed down to about the 3 or 4 next boys, and, if not answered then, are answered and explained by the master. Negative marks are given for missing the questions, and positive for answering them; and also a number of marks, ranging from 1 to 10 for Greek lessons, and from 1 to 7 for Latin lessons, is given to each boy after construing. These, with marks for composition, references, maps, composition in school, &c., are summed up every fortnight, and the new list in order of boys is arranged accordingly. Attention is also given to the keeping of note books, and marks assigned, usually every week, according to the mode in which they are filled up.	Old Testament, repetition, about 15 verses weekly; Virgil, G. 1V., about 250 lines; Livy, B. XXVI., about 4 or 5 chapters; Virgil, Æneid, XII., about 250 lines; Greek Grammar, verbs in $\mu\iota$; anomalous verbs, and Syntax as far as the prepositions (the substance only); Latin Grammar, marked rules in the Syntax; voluntary rep. Alcaic and Sapphic Odes, in Horace, Od., books III. and IV.; German, about 50 lines each term, or 150 lines in all, from different authors; French, about 240 lines in all, from Choix de Narrations.	Holy Scriptures, Old Testament, Joshua, Judges, Ruth, 1st term; Samuel, I., II., 2nd term; Kings, I., II., Chronicles, II., 3rd term. In holidays,—Student's Hume, holiday task, 3 vacations, wars of the Roses to the battle of Waterloo. During school term,—Smith's Greece, Peloponnesian war to death of Alexander; Liddell's Rome, beginning to Licinian Rog.

TABLE C.—HARROW.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."

Prose.	None.	None.	None.	None.		
		TRANSLATION.			None.	None.
Verse.	None.	About 42 exercises or 22 elegiacs (20 verses each), and 20 lyrics (5 stanzas each). Lent term shortened owing to illness in the school.	Greek sentences, from 10 to 14 lines each week.	Tiarks' Exercises in German; Delille's ditto in French; forty exercises in the year, both German and French.		
Prose.	None.	Weekly exercises, either from Kennedy's Curriculum or from passages selected by the master, so as to be afterwards corrected and re-translated.	Occasional translations of Wilkins' Greek prose exercises; about 10 lines at a time once a week.			

HARROW.—TABLE C.

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated, *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Remove, 36 Boys. Mr. E. H. Bradby. Number of Boys from the Division who have left the School during the same Year, 8.	Greek Testament, Lloyd's text; Homer, *Oxford* or *Tauchnitz text;* Euripides, *Paley's text;* Cicero, *Rugby selections, text;* Virgil, *Heyne's text;* Horace, *Oxford text;* Smith's History of Greece; Liddell's History of Rome; the Student's Hume; Keith Johnston's Physical Geography of Europe; Kennedy's Curriculum Stili Latini; Beatson's Greek Iambics; Latin Grammar (Edw. VI.); Delille's French Grammar; Choix de Narrations by G. Masson; Oxenham's Latin Elegiacs; Colenso's Arithmetic; Colenso's Euclid; Natural Science (voluntary), one subject each term; *e.g.* Page's Introductory Text Book of Geology.	Smith's smaller Classical Dictionary; Harrow Atlas, classical; Harrow Atlas, modern; Wall Map of Physical Geography of Europe; Greek and Latin Dictionaries, &c.	Greek Testament, St. Matthew, chapters i. to xi.; St. Mark, chapters vii. to xi.; Homer's Iliad VIII., IX.; Euripides, Bacchæ, 660 to end; Euripides, Electra, all; Cicero in Catalinam, IV.; Cicero, pro Archiâ poetâ; Cicero, pro Milone, c. i. to xx.; Virgil, Æneid, V.; Horace, Odes, Book IV.; French, portions of Masson's Choix de Narrations, about 30 pages.	Call up one boy at a time to construe a few lines; explain the allusions, if any, and parse the words. Mark him according to his proficiency. Pass questions which he cannot answer round the form and mark the boy who answers right. From 8 to 10 boys, taken in no regular order, put on in a construing lesson. No places taken.	Horace and Virgil, about two thirds of the quantity marked as read in Col. 3; Euripides, 200 to 300 lines by a few boys; this was voluntary, not a part of the necessary work. The Bible repetitions of Monday morning, generally about 12 verses verses selected from the Old Testament. Voluntary repetition, 40 lines of Ovid's Fasti per week. French, about 240 lines from the Choix de Narrations.	Scripture, Joshua, Judges, Ruth, I. and II. Samuel, I. and II. Kings, I. and II. Chronicles, in parts; Student's Hume, holiday task, 3 times; wars of Roses to battle of Waterloo; Smith's History of Greece, from Peloponnesian War to death of Alexander; Liddell's Rome, from beginning to Licinian Laws; about two thirds of Keith Johnston's Physical Geography of Europe.
Shell, 1st Division, 36 Boys. Mr. C. F. Holmes. Number of Boys from the Division who have left the School during the same Year, 9.	Homer, text; Horace, text or *Macleane's edition, small;* Virgil, text; Cæsar, *Long's,* De Bello Gallico; Cicero, text, Orations; Euripides, text; Xenophon Anabasis, *Macmichael;* Greek Testament and text; Edward VI.'s Latin Grammar; Wordsworth's Greek Grammar; Smith's History of Greece; Liddell's History of Rome; Smith's Student's Hume; Oxenham's Latin Elegiacs; Wilkins' Latin Lyrics; Kennedy's Curriculum Stili Latini; Delille's French Grammar; Masson's Choix de Narrations; Colenso's Arithmetic; Colenso's Algebra, Euclid; Natural Science (voluntary), one subject each term.	Smith's small Classical Dictionary; Smith's small Dictionary of Antiquities; Atlas, ancient and modern, chiefly Stamford's Harrow Atlas.	Greek Testament, St. Matthew, chap. i. to xi.; Virgil, Æneid, V.; Horace, Odes, Book IV.; Cicero, De Lege Manilia; Xenophon, Anabasis, V., c. xv., VI. c. iv.; Euripides, Medea, 1-575; Euripides, Alcestis, 280-1104, part in; Homer's Iliad, V., 1 to 288; Choix de Narrations, between 30 and 40 pages; repetition from the same, about 240 lines; Delille's Gr. and Exercises.	Each boy when put on to construe first reads the passages carefully, correcting false breathings or quantities; he then translates into good English, the style of which varies as far as is possible with the author; proper names are explained, derivations asked, and general questions that may arise from the author. The question is passed on from boy to boy, and a distinct mark is given to a boy who answers a fairly difficult question. With each Greek and Latin lesson a list of words is brought up, which should severally have the derivation and literal meaning so as to ensure, if possible, that the word be "looked out;" also a list of proper names, with a short substance of the article from Smith's Classical Dictionary. Each boy is compelled to keep a note-book and reproduce the information given in a previous lesson. No places taken.	Bible repetition, about 12 verses weekly; Horace, Odes, Book I., i. to xi., 300 lines; Virgil, Æneid, Book V., about 400 lines; Greek Grammar, elements of, to end of verbs in $\mu\iota$; Latin Grammar, syntax, marked rules; voluntary repetition, Ovid's Fasti.	Holy Scripture, Joshua, Judges, Ruth, I. and II. Samuel, I. and II. Kings, II. Chronicles; Student's Hume, holiday task, 3 times, wars of the Roses to the battle of Waterloo; Smith's History of Greece, from Peloponnesian War to death of Alexander; Liddell's History of Rome from beginning to Licinian Laws: Butler's Geography, ancient and modern, Italy and Greece, Europe.
Shell, 2nd Division, 35 to 37 Boys. Mr. A.G. Watson. Number of Boys from the Division who have left the School during the same Year, 5.	Homer, Iliad, text; Horace, text or *Macleane's smaller edition;* Virgil, text; Cæsar, *Long's,* De Bello Gallico; Cicero Orations, text; Euripides, text; Xenophon Anabasis, *Macmichael;* Greek Testament, text; Edw. VI.'s Latin Grammar; Wordsworth's Greek Grammar; Smith's History of Greece; Liddell's History of Rome; Smith's Student's Hume; Oxenham's Latin Elegiacs; Wilkins' Latin Lyrics; Kennedy's Curriculum, Stili Latini; Wilkins' Exercises in Greek Prose; Butler's Ancient and Modern Geography; Delille's French Exercises; Delille's French Grammar; Masson's Choix de Narrations; Colenso's Arithmetic, Euclid; Natural Science (voluntary), one subject each term, *e.g.* Page's Geology (part of).	Smith's small Classical Dictionary; Smith's small Dictionary of Antiquities; Atlas, ancient and modern, chiefly Stamford's Harrow Atlas; Greek and Latin Dictionaries, Gradus, &c.	Greek Testament, St. Matthew, ch. iv. to xi.; St. Mark, ch. vii. to xi.; Virgil Æneid, V.; Xenophon, Anabasis, Lib. V., c. v. to VI., c. iv.; Horace Odes, Book I., c. i. to xii.; Cæsar, De Bello Gallico, Book VIII., i. to xxx.; Cicero, pro Lege Manilia, c.xiii. to end; Cicero in Catalinam, I. and part of II.; Euripides, Alcestis, 280 to 1104; Euripides, Medea, 1 to 575; Homer's Iliad, V. 1 to 288; Ovid's Fasti, Lib. I. to II., 616, (with certain omissions;) French, portions of Masson's Choix de Narrations (about 10 pages each term).	Call up boys by selection to construe, parse, and explain the various allusions. Errors passed down the form for correction, and places taken accordingly. Necessary corrections, with explanations and observations, are given by the master. From 8 to 10 boys are put on in each construing lesson. In repetitions a portion is said by every boy. The Form is placed once in each week by the aggregate number of marks of the previous week. Once a month reports of the progress and conduct of all the boys are sent by their tutors to their parents. At the end of each term the proficiency of the boys is tested by an examination in most of the work of the term, and the Form is finally arranged by the aggregate marks of the term, and the examination as obtained in Classics, History, Divinity, Mathematics, and Modern Languages collectively.	Scripture repetition, about 12 verses weekly (in 31 weeks exclusive of examination weeks); Horace, Odes, Book I., i. to xi., 350 lines; Virgil, Æneid, Book V., about 400 lines; Greek Grammar, elements of, to end of verbs in $\mu\iota$; Latin Grammar, syntax, selected rules of; voluntary, Milton, *e.g.*, L'Allegro, &c., 30 or 40 lines weekly. French: — Delille's French Grammar, four conjugations of regular verbs, with the exercises on them; Choix de Narrations, about 80 lines each term. Latin prose sentences by heart; Greek prose sentences by heart.	Holy Scripture, Joshua, Judges. Ruth, I. and II. Samuel, I. and II. Kings, II. Chronicles; Student's Hume, (holiday task), 3 times, from wars of the Roses to battle of Waterloo; Smith's History of Greece, from Peloponnesian War to death of Alexander; Liddell's History of Rome, from beginning to Licinian Laws; Butler's Geography, ancient Italy, America, &c. Voluntary:—Natural Science, Henslow's Botany, 2 chapters; Page's Introductory Text Book of Geology, half of. Euclid, Books I., II., and III., according to the proficiency of the different boys.

TABLE C.—HARROW.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."

Verse.	Occasional; *e.g.*, an Ode of Horace into English verse.	About 44 exercises in 31 weeks;* *i.e.*, 24 elegiacs, each 16 lines (Oxenham's elegiacs); 20 lyrics (Wilkins' lyrics), each 4 stanzas.	Greek sentences, about 6 each time; (these form only portion of a lesson).	French exercises, 40 exercises in the year.		
Prose.	Rarely, if ever, an English theme.	Weekly exercises of 20 lines each from Kennedy's Curriculum, Stili Latini.	None.	None.		

* *i.e.*, excluding examination weeks. The school broke up earlier than usual in the spring term, owing to illness.

HARROW.—TABLE C.

	1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated, *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Sixth, Third Division, 35 Boys. Mr. F. W. Farrar. Number of Boys from the Division who have left the School during the same year, 8.	Horace (the Odes), text; Homer, the Iliad, text; Xenophon, the Anabasis, *Long;* Ovid, the Fasti, text; Cicero pro Lege Manilia, text; Cæsar de Bello Gallico, *Long;* Greek Testament; Smith's Greek History; Liddell's Roman History; Butler's Modern Geography; Wordsworth's Greek Grammar; King Edward VI. Latin Grammar; French Grammar, Delille; Masson's Choix de Narrations; Oxenham's Elegiacs; Wilkins' Lyrics; Colenso's Arithmetic; Colenso's Algebra; Simpson's Euclid.	Dictionaries, Classical Dictionary; (Smith's smaller one), Harrow Atlas, &c.; Gradus.	Xenophon Anabasis, Book V., parts of IV. and VI.; Homer's Iliad, Book V., 300 lines, and part of Book III.; Cicero pro Lege Manilia (half); Or. against Cataline I.; Horace Odes, parts of Books I. II. IV.; Cæsar de Bell. Gall. VII., i.—xxi.; Greek Testament, St. Mark, i.—ix.; Masson's Choix de Narrations, about 24 pages.	Call up as many boys as the time will admit. Every mistake is passed down the form until some boy corrects it. Places taken throughout the lesson. Questions asked on the grammar, words, allusions, &c. of each piece translated, and every lesson made, as far as possible, a vehicle for general knowledge. All the requisite information drawn, as far as possible, from the knowledge already possessed by the whole number of the boys. The old lesson always done again with the new one, and the boys required to remember and reproduce from their notes whatever was told them the time before. Each boy after saying a lesson or construing a passage is marked according to the merit of his work, and the Form is placed every week in order of merit.	Horace, a number of Odes; Latin Grammar, all the chief rules of syntax; Greek Grammar, the declensions, conjugations, &c., and a large number of rules in accidence; the Gospels for each Sunday; various passages of English poetry, &c.	Smith's Greek History, B.C. 421-301. Liddell's Roman History to B.C. 367; Modern Geography, Great Britain and America; Greek Grammar (accidence); Old Testament History (Joshua to Daniel); the Student's Hume latter half); Euclid; French Grammar, &c.
Sheil, Fourth Division, 36 Boys (average). Mr. E. E. Bowen. Number of Boys from the Division who have left the School during the same Year, 7.	Homer (text); Xenophon's Anabasis (*Long*); Cæsar (text); Cicero's Orations (text); Horace (text); Greek History (Smith); Roman History (Liddell); Ancient Geography (Butler); Oxenham's Latin Elegiacs; Wilkins' Latin Lyrics; Latin Grammar (Edward VI.); Greek Grammar (Eton, *Wordsworth*); Greek Testament (text); French Grammar (Delille); Masson's Choix de Narrations; Colenso's Arithmetic; Colenso's Algebra; Euclid (*Simpson*).	Smith's smaller Classical Dictionary; Ancient Atlas (small Harrow); Modern Atlas (small Harrow); Liddell & Scott's smaller Lexicon; Latin-English Dictionary; Gradus ad Parnassum.	Xenoph. Ana. Book V., and part of IV. and VI.; Homer, Iliad, Book V. about 300 lines; Cicero, Or. against Cataline; Cicero, pro Lege Manilia (half); Horace, Odes, Book I., and part of II. and IV.; Greek Testament, St. Mark, ch. i.—x.; Cæsar, Bell. Gall., Book VII., ch. i.—xxii.; Masson's Choix de Narrations, about 24 pages.	Boys are set on, arbitrarily, to construe; each is asked questions in the parsing, proper names, &c. of the portion which he construes. Mistakes passed down the form, places taken accordingly; the marks of the placing at the end of school taken down, and all marks added up weekly. Boys are encouraged in various ways to take notes of the lesson and the explanations given.	Horace, 32 odes; Scripture, 14 chapters; extra voluntary repetition Greek Testament; Latin Grammar, syntax rules; Greek Grammar, accidence (part). [The above estimate is only approximate, as near as can be ascertained now.] * The grammars contain more than is thought necessary to learn: the selected portions are learnt by the form repeatedly in the year.	Roman History (Liddell), to 367 B.C.; Greek History (Smith), B.C. 421—301; Ancient Geography (Butler), Italy, Greece, Palestine, England; Greek Grammar, accidence (part);* Old Testament History, Joshua to Nehemiah; also Greek and Roman History, oral instruction; Delille's French Grammar, part;* Euclid, various.
Fourth Form, First Division, 36 Boys. Mr. J. Smith. Number of boys from the Division who have left the School during the Year, 3.	Xenophon's Anabasis, *Macmichael*, Grammar School Classic; Cæsar, *Long*, Grammar School Classic; Ovid, Selections, *Eton*; History of Greece, Goldsmith, *Simpson's* Edition; History of Rome, Goldsmith, *Simpson's* Edition; History of England, Markham; Greek Grammar, Wordsworth; Latin Grammar, King Edward VI.; Delille's French Grammar; Choix de Narrations; Colenso's Arithmetic; Bland's Verses.	Harrow School Atlas.	Xenophon, Lib. IV., c. iii. to end of book; Cæsar, Lib. III. to Lib. IV. c. iv.; Ovid, Phyllis Demophoonti; Laodamia Protesilao; Penelope Ulyssi; Choix de Narr. about 24 pages.	A boy reads a portion of the author in Greek or Latin, then construes it, and is asked such questions on history, geography, or grammar as arise. Parsing words is the chief work, and of this every boy has his share; but in construing, the number who are called upon varies; sometimes it is possible to get a small quantity construed by every boy, more frequently by 10 or 15 boys. All errors, &c. are passed down the Form, places are taken, and registered at the end of each lesson. At the close of each week a list is published of the order resulting from the addition of all the marks gained in the week.	Ovid, 300 lines, by the whole Form; and 240 lines in addition, voluntarily learnt by the abler and more industrious boys; Macaulay's Lays of Ancient Rome; Virginia; Ivry; various portions of the Bible, amounting to about 150 verses; Greek Grammar, various portions; Latin Grammar, 60 rules of syntax; 36 Hymns from Dr. Vaughan's Chapel Hymn Book; Choix de Narr. about 60 lines.	History of Greece, B.C. 421—301, from p. 91 to 251; History of Rome to B.C. 367, from p. 57 to 107; History of England, A.D. 1485—1789. from p. 243 to p. 493; Joshua, Judges, Ruth, I. II. Samuel; I. II. Kings; St. Mark; St. Luke, i.—ix.; French Grammar.

TABLE C.—HARROW.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
	ORIGINAL.				None, except in so far as such subjects directly arise out of the regular work, already described.	
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	Occasional sets of English verse on some given subject.	None; very seldom, an easy fable given, to be written in Latin.	None.	None.		
Prose.	Occasional themes.	None.	None.	None.		
	TRANSLATION.				None.	None.
Verse.	Odes of Horace and passages of Homer, occasionally to be turned into English verse.	16 lines of Elegiacs and Lyrics twice a week (Oxenham's Elegiacs, Wilkins' Lyrics). About 44 exercises in the year.	None.	None.		
Prose.	Occasional translations of the authors construed in Form.	An easy piece of English to be turned into Latin once or twice a week. The length of the pieces varies with their difficulty; generally about 12 lines.	None.	Exercises from Delille's Grammar. About 20 exercises in the year.		
	ORIGINAL.				None, as regular work of the Form.	None, in Form.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	None.	None.	None.		
Prose.	Cannot be classified; described as far as possible in return D.					
	TRANSLATION.					
Verse.	Only very seldom.	(With tutor) twice a week 16 lines, or less. Books used are Oxenham's Elegiacs, Wilkins' Lyrics. The number of exercises of this kind done in the year is rather more than 40. Each exercise is corrected originally by the tutor; it is then shown up in Form, and entered in the marks of the week.	None.	None.		
Prose.	Not systematic; described in return D.					
	ORIGINAL.				None.	None.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	None.	None.	None.		
	None.	None.	None.	None.		
	TRANSLATION.					
Verse.	None.	60 copies of 14 lines each from Bland's Latin Hex. Pent. Very few boys do the whole, 14 in each set.	None.	None.		
Prose.	About 36 translations of Ovid, and a few of Cæsar or Xenophon.	36 copies of 5 sentences each; the English given by the master, based upon a previous lesson.	As in the case of Latin; but too variable for No. to be specified.	About 40 exercises from Delille.		

HARROW.—TABLE C.

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated, *viva voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Fourth Form, Second Division, 32 Boys. Mr. W. J. Bull. Number of Boys from the Division who have left the School during the same Year; None.	Xenophon's Anabasis, *Macmichael's edition;* Cæsar de Bello Gallico, *Long;* Electa ex Ovidio, Eton; Greek Grammar, Wordsworth; Latin Grammar, Edward VI.; Geography, Irish Society; History of Greece, Goldsmith, abridged by Simpson; History of Rome, Goldsmith, abridged by Simpson; French Grammar, Delille; Choix de Narrations; Colenso's Arithmetic; Bland's Verses.	Greek Lexicon, Liddell and Scott; Latin Dictionary, Riddle or Smith; Gradus; Atlas, Butler, Black, or Harrow.	Xenophon's Anabasis, Lib. IV., c. iii. to end of book; Cæsar de Bello Gallico, Lib. III. and IV. to c. iv.; Ovid, Deianira Herculi, Penelope Ulyssi, Phyllis Demophoonti; French, Choix de Narrations, about 24 pages.	Call up boys by selection to construe. The parsing done afterwards by boys who have not construed. All errors passed down the Form and places taken accordingly. The Form marked at the end of the lesson according to the resulting order. Separate marks given to those who are put on in construing. The Form is placed every Sunday in the order of merit for the preceding week.	Ovid, about 300 lines by the whole Form, and about 240 more said voluntarily by the higher boys; Scripture, Psalms, 103, 121, 122, 124, 139, 145, and The Epistle of St. James; Macaulay's Lays, about 500 lines said voluntarily by about one-third of the form; Hymns, about 36 from Dr. Vaughan's Chapel Hymn Book; Latin syntax, 60 rules selected; Greek Grammar accidence, and a few selected rules; French, Choix de Narrations, about 60 lines. The Latin syntax and Greek accidence are gone through at least twice and often three times in each term.	Scripture, Old Testament, Joshua, Judges, I. and II. Sam., I. and II. Kings; New Testament, St. Mark and St. Luke, i. to xviii. (in English version); Simpson's Greece, p. 91 to 251; Simpson's Rome, p. 57 to 107; Markham's England, p. 243 to 493.
Fourth Form, Third Division, 17 Boys, and Third Form. Mr. H. E. Hutton. Number of Boys from the Division who have left the School during the same Year; 5.	Xenophon's Anabasis, *Long;* Eton Electa ex Ovidio; Cæsar de Bello Gallico, *Long;* Arnold's Epitome Historiæ Romæ; Principia Græca, Hutton; Simpson's History of Rome; Ellis's Latin Exercises (from Cicero); Edward VI.'s Latin Grammar; Colenso's Arithmetic; Choix de Narrations, Masson; Delille's French Grammar and Exercises; Harrow Chapel Hymn Book.	Harrow Atlas; Gradus ad Parnassum (ad lib.); Latin Dictionary (ad lib.); Liddell's and Scott's (smaller) Greek Lexicon; Bland's Elegiacs.	Cæsar de Bello Gallico, II., xx. to xxxv., III., i. to xiii., the work of two terms; Arnold's Epitome Hist. Ant.; the chapters on Roman History from commencement to B.C., 451, the work of one term; Eton Electa ex Ovidio, 400 lines; Xenophon's Anabasis, IV., VIII., s. 1 to 14; Xenophon's Anabasis, V., i., ii., s. 1 to 14; Choix de Narrations, about six pages, each term, equal to 18 pages.	Each lesson consists of about 10 Greek, 12 Latin lines. Each boy in the form called up the same number of times in the week. Reads a portion, then construes Greek (or Latin) and English, then parses. Questions unanswered passed down, and a record kept by marks of the answers. Places not taken, but marks for questions answered added to total of week's marks. If the lesson be Ovid, the boy scans the lines as he reads. In such short lessons, the chief object is to ground thoroughly in the grammar of the languages, and geographical, historical, &c., allusions and illustrations are (comparatively) few, restricted, in fact, to what is required for a thorough acquaintance with the meaning of the author.	Ovid, 150 lines (compulsory), 150 lines (voluntary), total 300; selections from Scripture, about 300 verses; French, Choix de Narrations, about 60 lines; Latin Grammar, to end of irregular verbs (3 times in the year); Latin syntax, 60 selected rules (3 times in the year); Greek Grammar, (from Principia Græca) if possible to end of τύπτω (3 times in the year).	English, Greek, and Roman History as in IV., i., and IV., ii.

TABLE C.—HARROW.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."

RUGBY.—TABLE C.

RUGBY - - - - -

1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated, *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Sixth Form, 42 Boys. The Head Master. Number of Boys from the Form or Division of Form who have left the School during the same Year, 25.					
Hughes's Manual of Geography; Robertson's Charles V. The boys are always required to bring books without notes into school for construing lessons; and they generally use Tauchnitz's or Teubner's Classics.	Smith's Dictionary of Antiquities; Spruner's Atlas; Hughes's Bible Atlas; Smith's Biographical Dictionary.	Cicero de Naturâ Deorum, II. The First Book had been done in the preceding half-year. Juvenal, XI., XII., XIII., XIV., XV., XVI.; Virgil, Georgic, IV.; Æneid, XI., XII.; Lucretius, VI.; Aristophanes, Aves, Equites; Æschylus, Prom. Vinct.; Odyssey, XXI.-XXIII.; Herodotus, VIII.; Thucydides, III.	Call up four, five, or six boys by chance selection; each boy's name so called being marked to secure that all shall be called an equal number of times in the course of a month. The boy called stands up in his place, reads till he is told to stop, then translates into English without taking the words of the original. If he makes a mistake, he is stopped, and another is called on to correct him, and if he fails, then another, and so on. Slight inaccuracies or expressions which, though bad otherwise, are not inaccurate, are not noticed till he has done. Then these slips are noticed one by one; a better rendering is called for, either from himself or from some one else. Sometimes these sentences, sometimes the whole passage, is translated by the master. Then the passage is parsed, and historical, geographical, or other allusions are asked for. Finally, the master makes observations on the grammatical, historical, &c., &c., questions, that may present themselves. But the aim of the lesson is not to give information so much as to make every boy thoroughly understand the author, and more stress is laid upon the shades of meaning expressed by moods, tenses, collocation of words, &c., &c., and upon the connexion of thought, than upon any knowledge extraneous to the passage which it might be thought to illustrate. After reading a book through, two or three lessons are devoted to a retrospect of what is contained in it. If it be a philosophical or historical book, the master sometimes requires an analysis of it, but always finally gives a careful analysis of his own. In this analysis the connexion of events, if the work be historical, of reasoning if it be argumentative, is worked out.	Virgil, Book XI.; Juvenal, Sat. XI., XII.; Lucretius, Book VI.; Virgil, Georgic, IV. The repetitions are 60 lines a week. On Monday mornings they learn six or seven verses of the Bible instead.	Thucydides, III.; Herodotus, VIII.; Livy, VIII.; Cicero, De Naturâ Deorum, II.; Robertson's Charles V.; Hughes' Geography, Europe.
The Twenty, 23 Boys. Mr. T. S. Evans. Number of Boys from the Form or Division of Form who have left the School during the same Year, 5.					
Homer (the plain text); Horace (*Orellius*); Thucydides (*Arnold*); Sophocles (*Hermann* and also *Schneidewin*); Æschylus (*Paley*); Plato (*Stallbaum*); Greek Grammar (Wordsworth); Latin Grammar (Kennedy's).	Liddell and Scott's Greek Lexicon; Andrew's Latin Dictionary; Smith's Dictionary of Antiquities; Butler's Atlas.	Sophocles, Electra, Cicero, De Officiis, Lib. III.; Horace Odes, Books I. and III.; Plato, Phædo, c. i.-xxxii. (about one-half); Virgil, Æneid Second; Cicero, Second Philippic; Ovid "Nux Elegia"; Euripides, 300 lines; Homer, Iliad, XVII. *Divinity.* St. Peter's First and Second Epistles; and Corinthians, Epist. I., cc. i.-xii.	Call up one boy at a time, who, after reading aloud ten or a dozen lines of the lesson, translates them into English without taking the Greek or Latin words. When he has construed the piece, which he is allowed to do without being interrupted, in order to encourage fluency, he is questioned on the mistakes he has made, and if he cannot correct them, the questions are passed on to others. No taking of places during the lesson. As he questions each boy after his construe, the master draws attention to or briefly explains the allusions, the connexion of the argument, the structure of sentences, and requires illustrations of idioms from English authors, and from Greek and Roman. The last quarter of an hour is mostly occupied by the master in translating the lesson *vivâ voce*. Four boys in succession are mostly set on to construe each lesson.	Horace, 30 odes; Virgil, 500 lines; Sophocles, 700 lines.	Books of Joshua and of Judges; the 1st and 2nd Books of Kings; Macintosh's History of England, Vol. I. pp. 1-130; Smith's History of Greece, Book IV., pp. 239-418; Merivale's Fall of the Roman Republic, pp. 456-553. Every boy is expected to get up the argument and general substance of every book or part of a book he has learnt in the form.

RUGBY.

Prose.	None.	28 short pieces, involving hard constructions.	12	None.		

RUGBY.—TABLE C.

1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Fifth Form, Upper Division, 35 Boys. Mr. C. Evans. Number of Boys from the Form or Division of Form who have left the School during the same Year, 7.					
Latin Grammar, Kennedy; Greek Grammar, Wordsworth; Homer, *Dindorf*; Thucydides, *Bekker, Arnold; Æschylus, Dindorf*; Sophocles, *Dindorf*; Demosthenes, *Bekker, Penrose*; Virgil, *Heyne, Forbiger, Conington*; Horace, *Orelli*; Cicero, *Zumpt*; Livy, *Bekker*; Greek Testament, Textus Receptus; Smith's History of Greece; Liddell's History of Rome.	Smith's Latin Dictionary; Liddell and Scott's Greek Lexicon; Smith's Classical Dictionary; Atlas, Society U.K.	Homer, Iliad, Book I.; Thucydides, Book II.; Æschylus, Eumenides; Sophocles, Electra; Virgil, Georgics, I., II., IV.; Horace, Odes, I.; Cicero de Officiis, Book III.; Livy, Book V.; Greek Testament, St. Mark and Acts of the Apostles.	The passage for translation generally consists of 50 lines. The lesson lasts an hour, during which 8 or 10 boys are called up, the rest sitting, to translate, parse, and answer questions on points illustrative of the passage. The boys are called up by selection, in no regular cycle, yet so that, on the average, every boy is set on once in every four lessons. No places are taken, but marks are given for every good answer, as well as for every translation, and on these marks, combined with those of the half-yearly examinations, promotions depend. Questions are not passed down the form in regular order, but are distributed, as much as possible, to fix the attention of the whole form, with due regard to the special wants of individuals. Notes are taken during the lesson by the pupils. At the end of a lesson the passage is generally translated by the master.	Æschylus, Eumenides, 350 lines; Virgil, Georgic I., and 150 lines of Georgic II., Georgic IV.; Livy, V., six chapters; Sophocles, Electra, 300 lines; Horace, Odes I., 25 odes; Milton and Shakespeare, 300 lines.	Smith's Greece; Liddell's Rome; 300 pages of each. St. Mark, Acts of the Apostles; Thucydides, II.; Livy, V.
Fifth Form, Second Division, average 33 Boys. Mr. C. A. Anstey. Number of Boys from the Form or Division of Form who have left the School during the same Year, 8.					
Homer, Iliad and Odyssey (plain text); Virgil (without notes); Livy (*Cuvier*); *Clough*'s Plutarch's Lives; Smith's Greece; Liddell's Rome; Beatson's Greek Iambics; Crombie's Gymnasium; Kennedy's Materials; Æschylus, Prometheus (*Oxford edition*); Ovid's Fasti (*Rugby School edition*); Horace's Odes, (plain text) (*Wilkins* or *Maclean*); Wordsworth's Greek Grammar; Kennedy's Latin Grammar; Collis's Cards (Greek and Latin verbs); Cicero's Orations (*Rugby edition*); Greek Testament (*Oxford edition*).	Butler's Atlas; Smith's Antiquities; Smith's Classical Dictionary; Riddle's or Ainsworth's Latin Dictionary; Liddell and Scott's Greek Dictionary, large edition.	Iliad, 24th; Prometheus; Virgil, Æn. VII. (400 lines); Livy, Book III., 30 chapters; Horace, Book I., Odes; Ovid's Fasti, Lib. II.; Cicero pro Sexto Am. (two-thirds); Acts, the whole; Herodotus, parts of II.	About 10 boys called up by selection at each lesson to construe, explain, and parse. Errors passed down the form and answers to questions valued in marks. No change of places *generally* at each lesson, but at the end of each month, and according to the marks obtained during that time at each lesson, by construing, parsing, and by answers to questions and composition. N.B. The parsing not reserved till the whole construing of lesson is finished, but accompanying each boy's construing.	Virgil, about 400; Ovid, about 400; Horace, about 450; Milton's Paradise Lost, average 200 or 300; Greek and Latin Grammar, all the large print, with several of the more useful rules in small print; syntax, accents (all, two or three times over), and constant practice in Collis's Cards and Kennedy's irregular verbs, substantives, &c. Besides the above, a large quantity of lines is learnt by each boy as an extra at the Christmas examination.	Butler's Geography, generally; Smith's Greece; Liddell's Rome; and in illustration of subject of lesson, quotations from all books learnt in the lower forms. Every boy is expected to get up the argument and general substance of every book or part of a book he has learnt in the form.

TABLE C.—RUGBY.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Prose.	None.	None.	None.	None.		
TRANSLATION.						
Verse.	None.	30 copies of 16 verses (elegiacs, hexameters, or lyrics) from some English poet, made easy.	24 copies of 8 or 10 lines, Greek iambics, translated from a Greek play or Beatson.	None.		
Prose.	None.	Latin sentences, *vivâ voce*, afterwards repeated once or twice a week; 30 copies from Kennedy's Materials or Crombie's Gymnasium of about 20 lines each.	Occasional lessons from Wilkins' Greek Sentences. Quantity done in the year from 15 to 20 pages.	None.		

RUGBY.—TABLE C.

Fifth Form, Second Division, 33 Boys. Mr. C. T. Arnold.
Number of Boys from the Form or Division of Form who have left School during the same Year, 6.

1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *viva voce*, and the Quantity of each in the year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in same year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Homer, *Oxford Text*; Aristophanes, *Holden's Expurgated*; Æschylus, *Oxford Text*; Demosthenes; Wilkins' Olynthiacs; C. T. Penrose, Select Orations; Herodotus, *Oxford Text*; Virgil, *Oxford Text*; Horace, *Oxford and Cambridge Text*; Cicero, Select Orations, *a Rugby Reprint from Nobbe's Text*; Livy, *Bekker*, 3 vols.; Greek Testament, *Oxford Text*.	Liddell and Scott's larger Lexicon; Malt-by's Gradus; Wordsworth's Greek Grammar; Kennedy's Latin Grammar; Smith's Classical Dictionary; Kiepert's Wandkarte of Greece and Italy; Keith Johnstone's School Atlas; Stanley's Palestine.	Iliad, XXIV.; Aristophanes, parts of Vespæ; Æschylus, Prometheus Vinctus, and Septem contra Thebas; Demosthenes, 1st Olynthiac; Herodotus, parts of II.; Virgil, Æneid, VII.; Horace, Ode I.; Cicero pro Sexto Roscio Am. pro Milone; Livy, III.; Acts of Apostles, Greek Testament.	Call up on an average six boys in each lesson to construe, into English always and all through often, and in parts from English back to Latin or Greek. Errors passed on for correction to other boys; no places taken, but marks given; constant parsing and repetition of grammatical forms; questions in geography and history where names occur in lesson; and, after each lesson, construing it over to the boys. Details continually varying according to the kind of boys then in form; clever boys, loosely prepared, would require different handling from slow boys, who had been kept too exclusively to grammar and parsing; boys entering upon new subjects for the first time from boys reading work, to which they had been accustomed for some years; the end in view being in all cases the same, viz., to ensure, 1st, accuracy in grammatical forms; 2nd, a spirited rendering into English, suitable to the author; 3rd, an understanding of his argument and feeling of the author. And the most direct means to encourage boys to work for this end being (in this part of the school especially, where the stimulus of taking places at every lesson is for the first time removed), to give a distinct value in marks to each kind of excellence, and to every effort made to attain to such excellence, and to give them an idea every week or fortnight how their mark account stands.	Virgil, 400 lines; Horace, 500 lines; Æschylus, 300 lines; extracts from English Poets, Scott, Wordsworth, Tennyson, &c., 400 lines. So far compulsory for all. One of the following necessary,—400 Milton or Shakspeare, 600 Scott or Tennyson, or Campbell, or any standard lyric poets; 500 Horace, Odes; 300 Greek Play; 300 Homer, 300 Virgil.	Clough's edition of Plutarch's Lives (selections, half); Smith's Greece, Pelopponesian War; Liddell's Rome, Punic Wars, with choice from Smith's Greece, other parts; Arnold's Rome, c. xliii.-xlv.; Macaulay's England, iv., v.; Clough's Selections from Plutarch (other half); Hughes' Geography, p. 69-125, with 2 maps, one completely finished, the 2nd in outline for examination. Boys are expected to pass an examination in the substance of the authors put down in column 3; but it is not the custom to "commit substance and matter to memory."

Upper Middle Form, First Division, 98 Boys.
Mr. L. F. Burrows.
Number of Boys from the Form or Division of Form who have left the School during the same Year 9.

Oxford Greek Test.; Sir J. Mackintosh's England; Rev. J. White's France; Hughes' Geography. All Latin and Greek texts, small editions, without notes, chiefly Parker's.	Liddell and Scott's Lexicon; Kennedy's Latin Grammar; Wordsworth's Greek Grammar; Smith's Classical Dictionary; Arnold's Gradus; Malt-by's Gradus; Keith Johnstone's Atlas; Andrew's Latin Dictionary.	The Gospel of St. Matthew in Greek; Herodotus, 70 chapters of Book III.; Euripides, Hecuba; Cicero, De Lege Manilia; Sallust, 25 chapters of the Jugurthine War; Ovid's Fasti, Book IV., 500 lines; Horace, Book IV., Carmen Sæc.	Each boy called on to construe and parse in Latin or Greek at any rate once in a fortnight, frequently oftener. Places taken in all ways, marked at end of each lesson and marks added up at end of each week. French and mathematical and composition marks all added together, the whole total being made about equal to the marks of the half-yearly examination. Boys promoted according to this last total.	Hecuba, 150 lines; Horace, 250; Ovid, 250; Shakspeare, 200; Milton, Lycidas. Parts of the Bible.	Tales of a Grandfather, 12 chapters; White's France, 100 pages; Sir J. Mackintosh's England, 250 pages of Vol. II.; Geography, passim; Book of Judges, with Stanley's Palestine.

TABLE C.—RUGBY.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
	ORIGINAL.				10 lessons of an hour each, on laying down coast outline, rivers, &c. on a map.	A paper given after each lesson to test their understanding of what was told them, and their ability to apply it.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	2 copies, 60 lines, original on some subject.	2 copies, 20-30 lines, original on some subject.	None.	See other Returns.		
Prose.	4 copies, 120 lines, original on some subject.	2 copies, 30-40 lines, original on some subject.	None.	See other Returns.		
	TRANSLATION.				And *see* Table B b.	
Verse.	2 copies, 40 lines, from some passage construed in form.	40 copies, 640 lines, from "British Poets;" Dublin pieces, adapted.	28 copies, 280 lines, from easy bits of English Poetry, adapted, with many words given.	See other Returns.		
Prose.	20 copies, 400 lines, from the books being construed in form.	56 copies, 1,120 lines, Kennedy's Materials, Crombie's Gymnasium, Foliorum Centuriæ.	28 copies, 560 lines, chiefly from Wilkins' Elementary Greek Prose Book.	See other Returns.		
	ORIGINAL.				Maps illustrating work done; say 24.	
	English.	Latin.	Greek.	Modern Foreign.		
Verse	An occasional copy.	An occasional copy.	None.	None.		
Prose	An occasional copy.	None.	None.	None.		
	TRANSLATION.				*See* Table B b.	
Verse.	A few translations from Greek choruses; say 6.	Walford's 2nd Verse Book; Wilkins' Lyrics; Moberly's Verses, about 1,000.	Beatson's Iambics, say 200.	None.		
Prose.	None.	Dr. Kennedy's Curriculum; about 50 pages.	None.	None.		

RUGBY.—TABLE C.

1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Upper Middle Form, First Division, 37 Boys. Mr. T. W. Jex Blake. Number of Boys from the Form or Division of Form who have left School during the same year, 9.					
Herodotus, Sallust, Ovid, Cicero, Horace; Text only, no notes. Euripides Hecuba; English Notes, very brief and few; published by Parker, West Strand. Grammars, Wordsworth's Greek, Kennedy's Latin. Collis' Greek and Latin Verb Card. Walford's Second Series of Latin Elegiacs; Wilkins's Latin Lyrics; Beatson's Greek Iambics; Moberly's Praxis; Kennedy's Curriculum.	Smith's smaller Classical Dictionary; Atlas, Arrowsmith, or Butler, or Spruner, or Keith Johnstone. Liddell and Scott's larger Lexicon; Andrew's, Smith's or Riddle's Latin Dictionary; Yonge's English-Greek; Riddle and Arnold's English-Latin; Maltby's Greek Gradus; Yonge or Arnold's Latin Gradus; or Quicherat's Thesaurus.	Herodotus IV., lxi-lxxxvii., cxviii.-clx.; Sallust, Jugurtha, c. i.-xxv; Ovid's Fasti, IV., 500 lines, not entirely consecutive; Euripides, Hecuba; Cicero, Pro lege Manilia; Horace, Odes, 4th Book; St. John's Gospel, c. i.-x.; St. Luke's Gospel, c. i.-viii.	Place-taking form. Call up each boy to construe and parse, at least once each week; generally six at each of the eight construing lessons. Give him marks for his performance (maximum 100 out of 800 maximum total of week's marks), apart from those he gets by his place at the end of lesson. Pass all his mistakes down the form, and let the best answerer come up. If the mistake is not answered before it reaches the bottom, not invariably take it to the top, but ask it wherever attention seems to flag. Hear repetitions (except Bible) in the same way, passing down mistakes, calling up in no fixed order, but putting on every boy in each lesson.	Æneid, IX., 200 lines; Fasti, IV., 200 lines; Hecuba, 300 lines; Horace, Odes IV., 344 lines, during the 2 half-years. Milton's Lycidas; Shakspeare's Henry VIII., A. iv. Sc. 2., 170 lines, part of 2 holiday tasks. 300 verses, more or less, of the Psalms or New Testament.	White's France (illustrated and enlivened from Carlyle's French Revolution), p. 432-534; Mackintosh's England, Vol. II., p. 1-130; Hughes' Geography, France, with maps; Alpine System, with rivers flowing south, and cities on them, partly Hughes, partly Johnson's Handbook. During 2 half years. Mackintosh's England, Vol. II., p. 131-247; Tales of a Grandfather, 12 chapters. Part of 2 holiday tasks. Judges, with Stanley's Palestine.
Upper Middle Form, Second Division, 34 Boys. Mr. A. G. Butler. Number of Boys from the Form or Division of Form who have left the School during the same Year, 5.					
Homer, small Oxford edition; Ovid, *Cookesley's* Electa ex Ovidio; also Ovid's Fasti, *Paley's edition*; Horace, *Macleane's smaller edition*; Anthologia, *Rugby edition*; Virgil's Eclogues, *small Oxford edition*; Cæsar, *Long's edition*; Liddell's smaller History of Rome; Hughes' Geography; Greek Testament; Wordsworth's Greek Grammar; Kennedy's Latin Grammar; Collis's Cards of Irregular Greek and Latin verbs; Moberly's Latin Elegiac Verse Book; Walford's ditto; Wilkins's Latin Lyrics; Kennedy's Curriculum; Moberly's Praxis.	Smaller Liddell and Scott's Lexicon; Smith's Latin Dictionary; Long's Atlas, or the Harrow ditto; a classical dictionary, either smaller Smith, or Rich's; Gradus, Young or Arnold; English-Latin Lexicon, either Riddle's or Yonge.	Virgil, the Eclogues; Homer, Il. X. and XXIII.; Cæsar, Books IV. and VI.; Ovid (Electa ex Ovidio, *Cookesley*), 500 lines; Horace, Book IV., Odes; Anthologia (Evans), 200 lines.	A Latin lesson averages 35 lines, a Greek 22; in the former the less familiar words, in the latter nearly every word is parsed. Each boy, who is called up, construes from 2 to 4 lines; if he make mistakes, he is corrected and "taken up" by some one below him. If he does well he keeps his place, and gets extra marks. Every one is marked at the end of lesson by his place in form, his number, *i. e.* from the bottom.	About 650 lines made up of Horace, Ovid, and Virgil; and ten verses of the Bible weekly.	Joshua, Judges, Samuel, I. and II.; and Gospel of St. Luke in English; History of Greece (Smith, 120 pages; History of Rome (Liddell), 120 pages; Hughes' Geography (say) 50 pages.
Upper Middle Form, Second Division, 32 Boys. Mr. C. B. Hutchinson. Number of Boys from the Form or Division of Form who have left School during the same Year, 17.					
Homer, small Oxford edition; Ovid, *Cookesley's* Electa ex Ovidio; also Ovid's Fasti, *Paley's edition*; Horace, *Macleane's smaller edition*; Anthologia, *Rugby edition*; Virgil's Eclogues, *small Oxford edition*; Cæsar, *Long's edition*; Liddell's smaller History of Rome; Hughes' Geography; Greek Testament; Wordsworth's Greek Grammar; Kennedy's Latin Grammar; Collis's Cards of Irregular Greek and Latin verbs; Moberly's Latin Elegiac Verse Book; Walford's ditto; Wilkins's Latin Lyrics; Kennedy's Curriculum; Moberly's Praxis.	Smaller Liddell and Scott's Lexicon; Smith's Latin Dictionary; Long's Atlas, or the Harrow ditto; a classical dictionary, either smaller Smith, or Rich's; Gradus, Young or Arnold; English Latin Lexicon, either Riddle's or Yonge.	Iliad, X., XXIII. 1-800; Anthologia (*Rugby edition*), p. 41-61; Ovid (Eton selections); Laodameia Protesilao, Dido Æneæ, and Nos. V., VI., and XIV.—LXXIV.; LXXVII.-LXXXI., Virgil, Ecl., V.-X.; Horace, Odes, Book IV.; Cæsar, Bell. Gall., Books III., IV., and VII., chap. i-lvii.; St. Luke in Greek, chap. i.-xiv. The above was the work done in form; each boy, with two exceptions, prepared besides this, in tutor, Homer, Iliad, VI.; Virgil, Æneid, IX., 1-620. N.B. The two boys who did not prepare classical subjects with their tutor, read extra mathematics instead.	An average of 6 boys "set on" to construe at each lesson, so that each boy may be put on twice a week. The boy set on construes, parses, and explains allusions occurring in his piece; all errors passed down the form, and places taken accordingly. The whole lesson always construed to the form by the master, after the boys have finished. A Latin lesson averages 35 lines; a Greek 25. Marks are given for construing, and at the end of the lesson every boy is also marked by his place in form.	Ten verses of the Bible weekly; Horace, 200 lines; Ovid, 300 lines; Virgil, 150 lines; Greek Grammar to end of verbs in $\mu\iota$; Latin Grammar, Accidence, rules for Gender, and Syntaxis Minor (special rules); Collis's irregular Greek and Latin verbs.	Liddell's smaller History of Rome; "The Punic and the Civil Wars;" Hughes' Geography, North America; St. Luke's Gospel in English.

TABLE C.—RUGBY.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction, forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other subjects."
		ORIGINAL.				
	English.	Latin.	Greek.	Modern Foreign.

* The clever boys would do considerably more than this.

RUGBY.—TABLE C.

1 Authors or Books used, (not being mere Books of Reference), with the Edition.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ vo.e.* and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Upper Middle Form,* 3rd Division, 29 Boys. Mr. Moberly. Number of Boys from the Form or Division of Form who have left the School during the same Year, None.					
Greek Testament, *Bishop Lloyd;* Homer (*Oxford text*); Cæsar, *Long;* Xenophon's Anabasis. *Macmichael;* Ovid, Selecta ex; Praxis of Latin composition, Moberly; Examples in Elegiac Verse, Moberly; Smith's History of Greece; Hughes' Geogaphy	Lexicon, Liddell and Scott (abridged); Dictionary (Latin), Yonge's; Gradus, any edition; Atlas, Butler's or Johnstone's; Greek Grammar, Wordsworth; Latin Grammar, Kennedy; Latin and Greek Verbs, Collis.	Cæsar, Two Books; Ovid, 2,000 lines; Xenophon, eight chapters; Homer, 1,000 lines; Greek Testament, 12 chapters. N.B. — This is an average estimate, the form having been constituted only in September 1861.	1. Each boy construes from two to three times in the week, for which he has a special mark. 2. He also has many questions in each lesson passed to him, taking places for a successful answer. Numbers in the form are taken after each lesson. 3. In Greek, construing is word by word, or nearly so; in Latin, a sentence (main or subordinate) is taken together.	Ovid, Selections, 400 lines; Psalms at the rate of 12 verses per week.	Smith's History of Greece, from the beginning to B. C. 400.
Lower Middle Form, 30 Boys. Mr. E. A. Scott. Number of Boys from the Form or Division of Form who have left the School during the same Year, 4.					
Xenophon's Anabasis, plain text; Homer, Iliad, plain text; Ovid, Electa *Cookesley;* Cæsar, *Long;* Smith's History of Greece (the larger was used during the year ended Midsummer 1861; now the smaller has been substituted); Wordsworth's Greek Grammar, Kennedy's Latin Grammar; Moberly's Latin Verses; Moberly's Latin Prose Exercises; Walford's or Penrose's Latin verses.	Yonge's English-Latin Dictionary; Smith's Latin-English Dictionary; Liddell's small Greek Lexicon; Smith's small Classical Dictionary; Maps, &c.	Iliad, VI., 500 lines; Ovid, 600 lines; Cæsar, 1st Book; Xenophon, 32 pages.	A boy called up to construe three lines of Xenophon. The same piece construed by another boy, or by two others, if a hard piece; questions asked, and constructions explained. The same process repeated until the lesson is finished; provided always, that about a quarter of an hour is left for parsing. Each boy is called up, or as many as the time will allow of, and required to parse a word completely. In Cæsar or Ovid the same method is pursued, except that in Cæsar about five lines are construed, in Ovid two or four. Boys are called up by selection, and all errors passed down the form.	Ovid, 200 lines every half-year. These are exacted in the half-yearly examinations. Portions of Scripture are also learnt, two each week, but these are not exacted subsequently. Every boy is set on in every repetition lesson, without fail.	Smith's Greece to the Persian wars; St. Luke; Genesis; Exodus.
Lower Middle Form, 27 Boys. Mr. J. Percival. Number of Boys from the Form or Division of Form who have left the School during the same Year, 10.					
Homer (*Oxford text*); *Macmichael's* Xenophon; *Long's* Cæsar; Eton selections from Ovid; Greek Testament; Wordsworth's Greek Grammar; Kennedy's Latin Grammar; Moberly's Verse Book; Moberly's Praxis; Smith's History of Greece.	Butler's Atlas; Johnstone's Atlas; Liddell and Scott's small Lexicon; Riddle's small Latin Dictionary; Yonge's English-Latin Dictionary.	Iliad 6th, 200 lines; Xenophon's Anabasis, 32 pages; Cæsar, one Book; Ovid, about 600 lines; Greek Testament, 12 chapters of St. Luke.	Call up any boy, by selection, to construe, explain allusions, and parse; then call up another boy to construe the same sentence, and answer similar questions; then call up several in succession to parse single words, or explain constructions, &c., always by selection, till the sentence is exhausted, and so on through the lesson. All errors passed down the form, and places taken accordingly.	Ovid, 400 lines; Psalms, about 12 verses each week.	Smith's History of Greece, down to the Persian wars; also the period of Philip and Alexander the Great. St. Luke's Gospel, 12 chapters.

* This form having been constituted in September 1861, the statement

subjoined is of what *would* have been done in the year.

RUGBY.—TABLE C.

1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Methods of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Remove, varying from 32 to 40 Boys. Mr. H. J. Buckoll. Number of Boys from the Form or Division of Form who have left the School during the Year, 6.					
Xenophon's Anabasis (no particular edition); Kennedy's Palæstra Latina; Wordsworth's Greek Grammar"; Kennedy's Latin Grammar; Markham's History of England; Smith's History of Greece.	Smith's Classical Dictionaries; no Atlas in particular required. Maps with the outlines pricked, are occasionally brought in and filled up by the boys in school; the rivers, mountains, places, &c. to be inserted, being dictated at the time by the master.	Xenophon's Anabasis, about 370 lines, from Books I. and IV.; Kennedy's Palæstra, prose, about 900 lines; Kennedy's Palæstra, verse, about 350 lines.	In construing lessons, the first boy called up reads the Latin or Greek sentence, and then reads it off in English, *e.g.*:— "PuppibusegressusLatia stetit exul in herba." "Having gone forth from his ships, there stood a banished man on the sod of Latium." The second boy called up construes his passage, *e.g.*:— "Felix exilium cui locus ille fuit." Felix, happy he, cui, to whom, locus ille, that spot, exilium fuit, was a place of banishment.	In so elementary a form so much time must be given to learning the Greek and Latin grammars by heart, that there is little room for committing classical passages to memory; about 100 lines, however, of Ovid have generally been learnt for the examinations at Midsummer and Christmas. Also the English Poetry alluded to in No. 7 of this Table, under the head of verse translation.	Markham's England, 150 pages, Smith's Greece, 100 pages.
This is done in order that the boys may be practised in both methods of rendering Latin and Greek into English, the third boy as first, the fourth as the second, and so on. In asking questions, whether parsing, historical, or geographical, the question is first given out, and then the boy named who is required to answer it, *e.g.*:—ἴστω, parse, Fitzherbert. The object of this is to secure as far as possible the continued attention of the whole form. The parsing sometimes precedes the construing, sometimes is intermixed with it, and sometimes follows it. All errors are passed down the form, and places taken accordingly; but as this in itself is not a fair test (because a boy may have done badly throughout the lesson, and by a single answer mount to the top just before the places are marked), marks are given for construing and parsing to each boy called up, according to his proficiency. This unavoidable unfairness of place-taking alone is also counterbalanced by the mode in which lessons by heart are heard. The boys in these are classed in several columns, according to their proficiency. The first column contains those who say their portions by heart perfectly and fluently; the second, those who say right, but not fluently; the third, those who can correct themselves when they are told that they are wrong; and the last, those who fail altogether. Those in the first column have a mark of 40, those in the second of 30, those in the third of 20, those in the fourth, 0.					
IV., III., II. Form, 25 Boys. Mr. H. T. Rhoades. Number of Boys from the Form or Division of Form who have left the School during the same Year, 3.					
Wilkins' Greek Delectus; Kennedy's Latin Grammar; Wordsworth's Greek Grammar; Bradley's Exercises in Latin Composition; Penrose's Exercises in Latin Verse Composition; Kennedy's Palæstra Latina; Kennedy's Tirocinium; Markham's History of England.	Any school Atlas. The books used for translation or composition include vocabularies.	It is difficult to say how much is done in this part of the school in translation and composition, as the same work is done more than once during the year, and a portion only is given for examination. The number of lines construed during the year would be about 400 in Greek Delectus, 500 in Palæstra Latina. The Latin Grammar also serves in part as a construing lesson.	Call up boys by selection to construe. All mistakes passed down the form, and places taken accordingly. Those who gain places proceed to construe and parse in order, so that each boy either construes a passage or parses several words. Numbers entered in a book at the end of each lesson. After exercises have been marked, the boys are made to go over them again in form, explaining the cases, tenses, &c. Places taken and entered as before.	Collect and Gospel for the week. About 500 lines of English poetry. Greek Grammar, as far as the end of τίπτω. In Latin Grammar the gender of nouns, &c. to the extent of about 300 lines.	Markham's History of England, about 100 pages; Hughes Geography, about 30 pages; Samuel Book I. and part o Book II.

TABLE C.—RUGBY.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."

Prose.	None.	12 sentences from Bradley's Exercises every week, making 444 sentences in the year. In the 3rd Form Ellis used instead of Bradley.	None.	None.		

SHREWSBURY.—TABLE C.

SHREWSBURY

1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Sixth Form, First and Second Divisions, 23 Boys. The Head Master. Number of Boys who have left the School during the same Year, 11.					
For Grammars and Exercise books used, *see* Report of Form V. The Text books usually supplied are— Homer, *Dindorf;* Pindar, *Cookesley* or *Donaldson;* Æschylus, *Paley;* Sophocles, *Dindorf;* Aristophanes, *Holden;* Thucydides, *Arnold;* Herodotus, *Long;* Plato, *Stalbaum;* Aristotle, *Oxford;* Demosthenes, *Dindorf;* Horace, *Orelli;* Virgil, *Wagner;* Juvenal, *Mayor;* Tacitus, *Orelli;* Livy, *Raschig;* Cicero (*various*); Boettichcr's Historia Antiqua; Liddell's Rome; Smith's or Keightley's Greece; Oxford Greek Testament; Wheeler's Analyses of Bible; Barrett's Companion to Greek Testament; Paley's Evidences; Butler's Analogy; Easy Lessons in Reasoning; Sheppard's Decline of Roman Empire; Attwill's Universal History; Butler's Geography; Fougers's Classiques Français; Barnard Smith's Arithmetic; Todhunter's Algebra; Todhunter's Trigonometry; Drew's Conic Sections; Parkinson's Mechanics; Todhunter's Differential and Integral Calculus.	Lexicon, Liddell and Scott: Andrews' Latin Dictionary; Zumpt's Annales; Maps and Plans to Herodotus and Thucydides; Spiers' French Dictionary; Butler's Atlases; Smith's Dictionaries.	Homer's Iliad, book xviii., Odyssey, book viii.; Pindar, Nemea, Isthmia; Æschylus, Septem. c. Thebas, Choephori; Sophocles Antigone, Œdipus Rex, Œdipus Coloneus; Aristophanes, Acharnenses, Equites, Vespæ; Plato, Hippias Major, Io; Thucydides, book iv.; Demosthenes, in Leptinem, de M. G. Legatione; Herodotus, book iv.; Aristotle, Ethics, i. and ii.; Virgil, Æn. vi. Georg. iii.; Horace Carm. books 1 and 4, Epodes Sat. book ii., Epp. books i., ii., ad Pisones; Lucan, book 1; Excerpta from Lucretius and Martial; Cicero de Officiis, iii.; Epist. ad Att., ii.; Philipp. ii.; Tacitus, Hist., book ii.; Livy, books ix., x.; St. Luke's Gospel; Epistles to Romans and Galatians; Classiques Français, St. Simon Fontenelle, Montesquieu, Fenelon, &c., 80 pages.	The boy "called up" reads aloud the Greek or Latin till stopped, from 10 to 20 lines according to his calibre. Then he says the English of what he has so read, not being stopped in doing so unless he is actually wrong; but liable to correction at the close, for want of judgment or taste in his translating. He is then questioned on the passage as to matter, illustration, parsing, &c. according to need. He is then marked, and another called up, and so on. When the lesson is thus gone through with the boys, I go through it again myself, construing, commenting, and explaining, the boys using their note-books. My plan is always to have one Greek book, prose or verse, with one Latin book, verse or prose, on hand at the same time: as Thucydides and Horace, or Æschylus and Livy, and about 80 lines of one are said with 40 lines of the other at second and third lessons. I finish a book, or a play, before going to another author. In examinations I lay great stress on preparation of matter, as well as style and verbal criticism.	Virgil, 3 books; Horace (Odes) 2 books; Cicero, 30 chaps. of "De officiis;" Sophocles' Ajax; Greek and Latin syntaxes, once a year each.	Bible History, Wheeler's (one of the Testaments in a year); Roman History; Atwill's Universal History; Butler's Analogy. It must be observed that boys are advised and expected to read a great deal of matter not included in school lessons, and that they have a library containing such books as Grote's and Merivale's Histories, Pictorial and Macaulay's England, &c. &c.
Fifth Form, First and Second Divisions, 33 Boys. Mr. Calvert. Number of Boys who have left the School during the same Year, 14.					
Homer, Iliad, *Bekker;* Xenophon, Cyropædia, *Dindorf;* Euripides, Hecuba, Medea, *Oxford* 18 *mo.;* Greek Testament; Cicero, Opera Selecta, *Edinburgh, Boyd;* Tacitus, Germania, Agric. Annals, i., *London, Taylor and Walton;* Virgil, *Wagner* Ed. Min.; Nowell's Catechism, *Simpkin and Marshall;* Liddell's History of Rome; Smith's History of Greece; Wheeler's Analysis of Old Testament History; Student's Hume; Kennedy's Latin and Greek Grammars, Palæstra Latina, Palæstra Stili, Palæstra Musarum; Bradley's Latin Exercises; Arnold's Introductions to Latin and Greek Prose Composition; Wilkin's Notes for Latin Lyrics; Oxenham's Latin Elegiac Verse; Barnard Smith's Arithmetic; Colenso's Algebra, Colenso's Trigonometry; Potts's Euclid, smaller edition; Beautès des Ecrivains Français anciens et modernes, V. de Fivas, *8th edition;* Grammar of French Grammars, V. de Fivas; Bonnechose's History of France.	Smith's Classical Dictionary, Smith's Dictionary of Antiquities; Butler's Ancient and Modern Atlas; Carey's Gradus; Lexicons, Greek, Liddell and Scott; Latin, Andrews' Freund; Spiers' French and English Dictionary.	Homer's Iliad, xiii., xvi.; Euripides, Hecuba, Medea; Xenophon, Cyrop., i. ii., vi.; Greek Testament, Acts of the Apostles; Cicero; Cato Major, Lœlius, in Catalinam i., iv., Pro Archiâ Poeta, Pro Leg. Manil.; Tacitus Germania; Virgil; Æn., vii., ix., xi.; Nowell's Catechism (the whole); Les Fourberies de Scapin; Extracts from Les Fables de La Fontaine. During the time referred to in the report there was no difference in the work done by the two divisions of the form. Some few, never more than 3, belong to the non-collegiate class, and while Greek lessons are going on, either attend the mathematical or French lessons of other forms, or employ themselves on English or French history and composition. Thus, in the year referred to, were gone through the first 7 chapters of Bonnechose, and English history from the time of James I. to the present time.	At the beginning of a lesson, the last lesson is read over into English, by the lower boys of the Form, any one failing for want of preparation is sent down, and another called up. The day's lesson is then taken, the Latin or Greek being first read and then construed (Latin or Greek and English). Each boy reads into English the portion construed by the boy who was up before him, and then proceeds to the fresh part of the lesson. Parsing questions and others relative to the subject are asked of the boy up, in general, and if not answered are passed to the others. Places are not taken. If time allows, after the master has given his translation, and explanations, the whole new lesson is again read into English by some of the lower division, who are nevertheless at times called up at first, though not so often as the upper boys. A written translation, of more difficult passages, is sometimes required to be made and brought up immediately after the lesson.	Euripides, 200 lines; Cicero, 250 lines; Tacitus, 100 lines; Virgil, 500 lines; Greek Grammar, Syntax and Appendix on Prepositions; Latin Grammar, Syntaxis Major.	For Classical Authors *see* Column 3. Wheeler's Analysis of Old Testament History (the whole); Liddell's History of Rome, books i. to iv.; Smith's History of Greece, books i. to iii. Student's Hume, from James I. to present time; Bonnechose's History of France, ch. i.-vii. The Geography connected with all these subjects is taught by means of blank maps drawn by the boys themselves and brought up with every lesson containing geographical allusions. The Student's Hume (during the time referred to in the report) was used for the purpose of making analyses of English history. (See Table C. under head English Prose, Original). The matter and style of poetical authors are treated generally as those of prose writers.

SHREWSBURY.

TABLE C.—SHREWSBURY.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same year.	9. Method employed to test individual Proficiency in such "other Subjects."
	ORIGINAL.				Arithmetic, Euclid, and algebra form part of the regular work of every boy; but such boys as are sufficiently advanced are further instructed in trigonometry, conic sections, mechanics, differential and integral calculus, according to their respective attainments. The upper division have 3 lessons a week, which, together, occupy 4 hours; the lower have 2 lessons a week occupying 3 hours. Each boy is also required to produce at the beginning of one of the lessons an exercise (generally in algebra or trigonometry) appointed at the time of the previous lesson.	Every boy's proficiency in Euclid is tested both *vivâ voce* (with the "black-board") and by written examination at the lessons. Proficiency in other mathematical subjects is tested mainly by written examination. Also at the end of each half year there is a general examination in all the work done in that half year.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	Heroic, 12; Elegiac, 20; Lyric, 16; Exercises, about 1,000 lines in the year.	None.	None.		
Prose.	Four or five themes or essays in the year.	26 themes in the year.	None.	None.		
	TRANSLATION.					
Verse.	Sometimes an epigram (*ad libitum*) to translate.	10 or 12 passages into Latin verse, about 300 lines in the year.	200 iambics from Palæstra Musarum, No. 8, and trochaic or anapæstic occasionally for best scholars.	None.		
Prose.	Cicero, De officiis, about 30 chapters in the year.	Palæstra Stili and Curriculum into Latin once a fortnight, about 60 pages in the year; Arnold's Latin prose all once a year.	Passages occasionally given into Greek prose from Palæstra Stili, about 10 pages in the year; Arnold's Greek prose all done once a year.	40 French exercises and 20 passages to translate into English.		
	ORIGINAL.				Arithmetic, Euclid, and algebra form part of the regular work of every boy. Boys sufficiently advanced are instructed in trigonometry. Both the upper and lower divisions have 3 lessons a week, together occupying 4 hours. Each boy is also required to produce an exercise (generally in arithmetic) after the plan mentioned under the Sixth Form.	The methods are the same as in the Sixth Form.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	Occasionally, but translations form the main part of the exercises.	None.	None.		
Prose.	An English theme, or, analysis of English History about five times in the year. No particular quantity is insisted on, but care and attentive work are required.	Occasional.	None.	None.		
	TRANSLATION.					
Verse.	None.	Elegiac and Heroic, 35 copies, about 600 lines; partly from various authors, partly from Oxenham's Latin Elegiacs; 20 copies, about 400 lines from Wilkins's Lyrics.	20 copies, 240 lines, by the upper division only; the rest doing either Latin Arnold, or extra Latin Lyrics.	None.		
Prose.	No regular exercise farther than what is required in the examination half-yearly.	35 copies, 700 lines, mainly from Kennedy's Palæstra Stili Latini.	Arnold's Greek Prose composition once a week, two exercises at a time. See Table D., Saturday, 7¾ to 9. The whole book is thus gone through in the course of the half year.	36 copies in French, about 720 lines.		

TABLE. C.—SHREWSBURY.

	1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Fourth Form, Upper and Lower Divisions, 34 Boys. Mr. Burbury.* Number of Boys who have left the school during the Year, 8.	Xenophon's Anabasis, *Carmichael's;* Arnold's First Greek Book; Dr. Kennedy's Palæstra Latina (containing Extracts from Virgil, Ovid, and Horace, and an Abstract of Roman History in Latin Prose); Virgil, *Oxford Text;* Ovid's Fasti, Text; Dr. Kennedy's Greek and Latin Grammar; Livy, *Oxford Text;* Bradley's Latin Exercises; Arnold's Greek and Latin Prose Composition; Outlines of Greek, Roman, and English Histories; Sinclair's Explanation of the Church Catechism; Riddle's Scripture History; Greek Testament; Sullivan's Geography; L'Histoire de France, *Fleury;* Grammaire des grammaires par V. De Fivas; Hall's Second Course; Gasc's Materials for French Prose Composition.	Liddell and Scott's smaller Greek Lexicon; Riddle's smaller Latin Dictionary.	Upper.—Virgil, Æneid, two books, Ovid's Fasti, two books; Xenophon's Anabasis, four books; Livy, 50 chapters; Palæstra; the prose extracts, and the selections from Ovid (about 400 lines); Fleury's Histoire de France (about 100 pages). Lower.—Ovid's Fasti, two books; Arnold's First Greek Book; Dr. Kennedy's Palæstra; the prose extracts and the selections from Ovid (about 400 lines); Fleury's Histoire de France (about 100 pages); Greek Testament (about half of St. Luke's Gospel).	Any one of the boys being called upon stands up and reads the Latin or Greek till told to stop. He then construes what he has read, taking the Latin or Greek by a few words at a time, and rendering them into English, as literally as possible. He is then questioned in the syntax and parsing. When the lesson has been gone through, the boys, as they sit, are questioned haphazard to see how far they have attended to the questions asked, or the explanations given, in the course of the lesson. Occasionally, also, the previous lesson is construed, and questions on it asked, with the same object. Boys are punished for proved inattention, but there is no "taking places." The order of boys in the form is changed once a month, according to the master's general impression, or according to the average of the boys' marks (which are given for every lesson, and summed up in a weekly average).	Upper.—Ovid's Fasti, about 1,800 lines. Lower.—Ovid's Fasti, about 1,200 lines. Upper and Lower.—Greek and Latin Grammar, as in column 1. Such boys as are excused Ovid's Fasti repeat from Milton's Poetical Works about 1,200 lines.	Outlines of History, as in column 1; Riddle's Scripture History (the whole); Sullivan's geography generalized (about 200 pages); Arithmetic, algebra, and Euclid; Sinclair's Explanation of the Church Catechism (the whole).
Third, Second, and First Form, 40 Boys. Mr. Greenwood. Number of Boys who have left the School during the same Year, none.	Arnold's First Greek Book; Dr. Kennedy's Greek Grammar; Dr. Kennedy's Latin Grammar; Dr. Kennedy's Palæstra Latina; Dr. Kennedy's Tirocinium; Walford's Latin Verses; Arnold's Latin Verses; Bradley's Latin Exercises; Arnold's Latin Exercises; Child's History of Rome, Greece, and England; Sullivan's Geography; Riddle's Scripture History; Sinclair, Church Catechism; Girdlestone, Church Catechism; Hall's French Reading Lessons; Hall's Second French Course; Euclid (*Pott's*); Barnard Smith's Arithmetic; Colenso's Algebra: Latin Vocabulary; Spelling Book superseded; L'Histoire De France, par Fleury.	Liddell and Scott's small Greek Dictionary; Andrews' Latin Dictionary; Butler's Atlases.	Upper Third.—Arnold's First Greek Book—the whole; Palæstra Latina, prose and verse extracts, nearly the whole. Lower Third.—Arnold's First Greek Book, to ex. 20; Palæstra Latina prose, from p. 154 to 185; verse, from 96 to 106. Second. — Arnold's First Greek Book, to ex. 11; Tirocinium, from p. 24 to the end. The 1st form does not get beyond the Latin Accidence; Fleury's Histoire de France (about 50 pages); Hall's Second Course (nearly the whole); Hall's First Course (about 60 pages).	We begin by going through the previous lesson. A boy reads the Greek or Latin until he is told to stop, and then translates literally the piece which he has read, taking the Greek or Latin words. The new lesson is then gone through in the same way; after which most of the words in the lesson are carefully parsed. The boys do not change places, but receive a mark for each lesson. At the end of each week they are told what their marks for the week are, and at the end of the month these marks are added together, and the boys take a new order, which they keep for the next month. The Upper and Lower 3rd do their construing and grammar lessons separately. In the others they are taken together.	Extracts from Ovid and Tibullus, about 250 lines. For the Upper 3rd only, the rest doing grammar.	Sinclair on the Church Catechism; the whole. Girdlestone. The 2nd form has gone through the part called "The Young Churchman Armed," three times; History of England to the end of reign of George II.; Sullivan's Geography, Europe; Arnold's Latin Exercises, to ex. 15, four times over; Riddle's Scripture History; the whole of the New Testament; Old Testament to chapter viii.; Greek Grammar to the end of verbs in μι (3rd form); 2nd form to the end of the contracted verbs; Latin Grammar to the end of Syntaxis Minor and Prosody.

* Mr. Burbury vacated the Second Mastership in June 1861.

TABLE C.—SHREWSBURY.

7. The Kinds and Quantities (as far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
Original.					Arithmetic, Euclid, and algebra form part of the regular work of every boy. Both the Upper and Lower Divisions have 3 lessons a week, together occupying 4 hours. Each boy is required to do an exercise similar to that in the 5th form.	The methods are the same as in the 6th form.
	English.	Latin.	Greek.	Modern Foreign.		
	None.	None.	None.	None.		
Translation.						
Verse.	None.	2 copies (12 or 16 lines each) weekly, translated from English, which is dictated by the master.	None.	None.		
Prose.	Occasional translations of selected passages.	1 copy weekly, about 30 lines, of a passage selected, or of one dictated by the master.	1 exercise weekly, written, and also gone through orally.	1 copy weekly in French, about 15 lines (translation of the exercises in De Fivas' French Grammar). French.—A few of the more advanced boys together with the non-collegiates of the 5th form send in every alternate week an additional translation of about 20 lines selected from "Gasc's Materials for French Prose Composition."		
Original.					Arithmetic and Euclid form part of the regular work of every boy in the 3rd, 2nd, and 1st forms. These forms have 4 lessons a week, together occupying 4 hours. Each boy is also required to do an exercise similar to that in the 5th form. A few boys sufficiently advanced are further instructed in algebra.	The methods are the same as in the 6th form.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	None.	None.	None.		
Prose.	None.	None.	None.	None.		
Translation.						
Verse.	None.	Walford's.	None.	French.		
Prose.	None.	Bradley; Arnold.	None.	Hall's Second French Course. One exercise weekly for the more advanced boys. One exercise weekly from Hall's First Course for beginners, or for those boys who have learnt but a short time.

TABLE D.

SHOWING

The Employment of Time in Lessons, and the Composition done, by each Division within a given period.

ETON.

FIRST DIVISION, SIXTH FORM, AND PART OF UPPER FIFTH, 32 BOYS. THE HEAD MASTER.

Lessons and Compositions during two School Terms, from January 16 to August 2.

	Lessons.	Compositions.
Sunday	No school lessons. All done with the tutor.	A Latin theme set on Saturday, not less than 30 lines, shown up to the tutor, at such time as he fixes to the Head Master, on Wednesday morning. A translation from an English author into Latin, and one into Greek, not less than once in each school time. A copy of Latin verse, if Hexameters not less than 40; if elegiacs, not less than 30, set on Monday, shown up to the tutor the time fixed by him to the Head Master on Friday morning. A copy of Greek iambics once in four weeks, about 30 lines. A copy of lyrics about three times in each school term.* A set of questions in divinity, set on Saturday, shown up to Head Master Monday morning. A translation from a Greek or Latin author into English every week in which a saint's day occurs.
Monday	7 to 7½; or 7½ to 8½. According to time of year, Greek Testament. 11 to 12. Mathematical school. 3 to 3¾. Homer Odys., 45 lines. 5½ to 6. Cicero Epistles.	
Tuesday	7½ Repeat Theocritus, 45 lines. 8¼ to 9. Eurip. Ion., Œsch. Agamemnon. 11 to 12. Lucret. Lib. I. Virgil, Georg. I, II. 60 lines. Half Holiday.	
Wednesday	7½ Repeat Virgil or Lucretius. 11 to 11¾. Homer Odys. 3 to 3¾. Cicero, Epistles. 5 to 6. Mathematical school.	
Thursday	7½ Repeat Ovid's Fasti, 40. 8½ Repeat Greek Play, 50 lines. 11 to 11¾. Thucyd. Lib. III. Demosth. 3. Repeat Demosth. adv. Zenotherium et Apaturium.	
Friday	7½. Repeat Homer, 90 lines. 11 to 12. Mathematical school. 3 to 4. Horace, Satires or Epistles 70 lines. 5½ to 6. Demosth. or Thucyd.	
Saturday	7½. Repeat Horace, 90 lines. 8¼ to 9. Eurip. Ion. Æsch. Agamemnon. 11 to 11¾. Theocritus, 45 lines.	

SUMMARY OF LESSONS.

Greek construing	8
Greek repetition	4
Latin construing	4
Latin repetition	3
Mathematical	3
	22

* The doing Greek iambics *or* Latin verse is optional, the lyrics are compulsory.

N.B.—The above scheme is that of a *regular* week's work. But this is often broken in upon by saints' days, anniversary, commemoration, &c. The present school term of 12 weeks contains 6 regular weeks.

The boys in this Division during the present school time (April 1862) write two English essays, on subjects set by the Head Master one month before they are written; they are referred to books for information on the subject and allowed three hours and a half to write the exercise.

They have also a portion of ancient and modern history set during each school time, in which they are examined by papers during the last week of the school time.

I am not able at this distance of time to state with accuracy the amount of composition and repetition done in the year ended July 1861; but I hope that the statement of the work of a school time, as given above, will afford a sufficiently clear view of the work done.

CHARLES O. GOODFORD.

April 15, 1862.

SECOND DIVISION, PART OF UPPER FIFTH FORM, 32 BOYS. REV. F. E. DURNFORD.

Lessons and Compositions during the Year 1861.

	Lessons.	Compositions.
Sunday	No school. A page of questions is set on Saturday, to be done on Sunday, shown up on Monday.	A Latin prose exercise weekly, original or translation at the discretion of the master, (the Head Master,) not less than 40 lines, usually 50 or 60.
Monday	7½ to 8. Greek Testament Epistle. 11 to 12. Mathematics. 3 to 3¾. Homer Odyssey, Σ to Ω, 40 lines a lesson. Livy, 24th book, or Cicero's Letters, 40 lines a lesson.	
Tuesday	7½ to 8. Greek play, 45 lines Agamemnon, Antigone. 8 to 8¾. Repeat Poetæ Græci: Saturday's Greek Lesson. 11 to 11¾. Lucretius, or Virgil's Georgics or Eclogues, 60 lines. Half Holiday.	A Latin verse exercise, original or translation, about 40 lines, varied occasionally by Greek iambics or Latin lyrics. The Prose exercise is shown up on Wednesday, the verse on Friday. A translation from Latin into English is shown up on Saturday, whenever a saint's day falls in the week.
Wednesday	7½ to 8.34. Repeat Ovid's Fasti, 40 lines, showing up Latin Prose exercise. 11 to 11¾. Homer as on Monday. 3 to 3¾. Livy or Cicero as on Monday. 5 to 6. Mathematics.	
Thursday	7½ to 8.40. Repeat Virgil or Lucretius or Greek play, lesson construed on Tuesday. 11 to 11¾. Construe Thucydides, or Demosthenes or Herodotus, 40 lines. 3 to 3¾. Repeat Greek prose, or Latin prose, 40 lines. No school at 5.	
Friday	7½ to 8.40. Repeat two lessons of Homer. Show up verse exercise. 11 to 12. Mathematics as on Monday. 3 to 4. Horace, Satires and Epistles, 70 lines. 5½ to 6. Greek prose, construe as on Thursday at 11.	
Saturday	7½ to 8. Greek play as on Tuesday. 8 to 8¾. Repeat Horace, 70 lines. 11 to 11¾. Poetæ Græci, Theocritus, Callimachus, 20 to 40 lines. Half Holiday.	

SUMMARY OF LESSONS.

A translation (of Latin prose into English) is added to the exercises in every third regular week, and whenever a saint's day occurs.

Tenth, Eleventh, Twelfth, and Thirteenth Divisions. The Remove, about 160 Boys.

Lessons and Compositions during the whole Year from Election 1860 to Election 1861.

Lessons.		Compositions.
Sunday.	—	One Latin essay (called theme) of at least 14 lines in the Lower Remove, and 16 lines in the Upper Remove. Theme set on Saturday morning and shown up in school on Tuesday morning. One copy of Latin elegiacs of at least 14 lines in Lower Remove and 16 in Upper Remove. Set on Monday at 11; shown up on Friday at 7½. About twice in a school time a copy of elegiacs substituted for the theme, and lyrics (Alcaics or sapphics) for the verses; 3 stanzas in Lower Remove and 4 in Upper Remove being the minimum. A Greek exercise of sentences (8 in Lower Remove and 10 in Upper Remove) from "Arnold's Introduction to Greek Prose Composition;" shown up on Friday at 3. When there is a saint's day† in the week, a translation from Cornelius Nepos into English prose is substituted for the Greek exercise. Other exercises. Sunday questions shown up on Monday at 7½. Maps shown up on Thursday at 7½. Description, shown up on Friday at 5½.
Monday	7½.* Greek Testament, St. Mark. 11 to 11¾. Poetæ Græci, Pars. I. 3 to 3¾. Cornelius Nepos. 5½ to 6. Horace's Odes.	
Tuesday	7½. Saying Virgil. 11 to 12. Mathematics. Half Holiday.	
Wednesday	7½. Say short Ovid. 11 to 11¾. Poetæ Græci, Pars. I. 3 to 3¾. Grecian history, Macedonian period. 5½ to 6. Horace's Odes.	
Thursday	7½. Geography. 11 to 12. Mathematics. 3 to 3¾. Scriptores Græci (Xenophon, not Anabasis). Play at 4.	
Friday	7½. Say Poetæ Græci. 11 to 11¾. Virgil's Æneid, Books I., II., III. 3. Say Horace's Odes. 5½ to 6. Virgil's Æneid, Books, I., II., III.	
Saturday	7½. Geography. 11 to 12. Mathematics.

In reply to a request that the return for the Sixth and Upper Fifth might be extended so as to embrace the whole year, the Head Master says:—

"I have great difficulty in making the returns of the work of the whole year, according to the desire of the Commissioners. Our long, or spring half-year, used to be divided into three periods. The first, which we call '*Common Time*,' consisting of about six weeks, was arranged precisely in the same manner as the short, or autumn half-year, in respect of lessons. In the next six weeks, which we call '*Easter Time*,' the hours were generally the same, except that we had a *whole remedy* on Tuesdays, and that the hour from 12 to 1 on Saturdays was devoted to elocution. The *work* so far differed from the ordinary work that we did *Horace's Odes* instead of Virgil and Homer on Mondays and Wednesdays in the forenoon; that we did little besides *Greek grammar* and grammatical exercises in the school afternoons; and that a *Latin lyrical task* took the place of the Greek verse on Saturdays.

"But this work has been much interrupted by our Easter holidays, and our Easter time must be reconstructed. I really cannot say how much we did or left undone in Easter time 1861.

"In the remaining eleven weeks (which we call '*Cloister Time*'), we continue the whole remedy on Tuesdays, and the lyrical task on Saturdays; but *Horace's Satires* or *Epistles* take the place of the Odes, and in the latter part of the afternoon of school days we construe *Juvenal* or (on alternate days) *Theocritus*.

"I trust that this information may supply what the Commissioners desire."

Sixth Form, Lower Division, 19 Boys. The Head Master.

Lessons and Compositions during the Autumn Half-year, 1861.

Lessons.	Compositions.
Sunday - 4 to 4¾. Greek Testament.	The Greek Testament and the Livy are done with the head master. The other classical lessons with Mr. Griffith.
Monday - 9 to 10½. Thucydides. 10½ to 12. Greek history or Latin composition. 2 to 4. Mathematics. 5 to 6. Livy.	
Tuesday - 7½ to 8. Greek Testament. 9 to 12. Mathematics; Half Remedy. 4 to 4¾. Preparations, French and German.	
Wednesday 7½ to 8. Greek Testament. 9 to 10. Homer. 10 to 12. Greek exercises. 3½ to 4½. Sophocles.	Latin prose translation or Latin essay,
Thursday - 7½ to 8. Greek Testament. 9 to 10½. Virgil. 10½ to 12. Composition with tutor; Half Remedy. 4 to 5¾. As Tuesday.	—
Friday - 7½ to 8. Greek Testament. 9 to 12. Mathematics. Half Remedy. 4 to 4¾. As Tuesday.	Latin verse; translated or original: generally hexameters.
Saturday - 7½ to 8. Greek Testament. 9 to 9¾. Repetition of Sophocles. 9¾ to 12. Greek iambics and looking over tasks. 3 to 4¾. Preparing Thucydides, &c.	Greek iambics sent in at 12.

Summary of Lessons.

Greek Testament	3½ hours.
Greek subjects in school - -	3 forenoons, 9 hours. Wednesday afternoon, 1 hour.
Latin - - -	4 hours.

	4 to 6. French and verses.	
	7 to 8½. Latin Grammar learnt for Saturday.	
Saturday	7½ to 8. Bible reading.	Translation into Latin prose, about 10 or 12 lines.
	9 to 10. Latin Grammar said; Latin lesson learnt.	
	10 to 11. Latin lesson said.	
	11 to 12. Translation from English into Latin, about 12 lines.	
	3 to 5. French, and English History analysis.	
	7 to 8½. English poetry for Monday, and Greek tree on Paper.	

Summary of Lessons.

Bible reading and catechising	6
Greek	3
Latin	5
Arithmetic, &c.	3
French†	2
English History	2
Repetition:—English 1, Greek and Latin 5	6
Grammar paper*	1
Total	28

Every exercise, analysis, and grammar paper is marked, and the marks are added, as they are given, to the ordinary marks for the lessons.

Every boy is required also to have a word book, in which either words marked beforehand or those which he does not know are written down, and some account given of their forms and meanings; these are looked over also and marked.

Occasionally, for a few weeks before the Easter holidays, in both divisions of the Fourth Form, the syntax in the Latin grammar takes the place of a Latin lesson; the examples being written down and afterwards translated *vivâ voce*. Then the rules are explained and applied by the boys from the examples respectively. Also for the last twelve weeks of the summer half-year the hour from 11 to 12 a.m. on Saturdays has been lately occupied with a lecture on some scientific subject.

* The Grammar Paper is a paper of questions, set, generally on Tuesday from 11 to 12.

† French is mentioned four times, but the class is divided for French Lessons, each division only going twice.

TABLE D.

WIN-CHESTER.

FOURTH FORM, JUNIOR DIVISION, 10 Boys. Mr. H. E. MOBERLY, Assistant Classical Master.

Lessons and Compositions from Feb. 3 to Dec. 16, 1861.

	Lessons.	Compositions.
Sunday	Collect and Gospel explained and learnt by heart.	—
Monday	7½ to 8. Catechising. 9 to 10. Repetition of English poetry; Greek lesson prepared. 10 to 11. Greek lesson said. 11 to 12. Arithmetic and algebra. 2 to 3½. Latin lesson prepared; Ellis' Exercises gone through. 3½ to 4½. Latin lesson said. 5 to 6. Ellis' Exercises done. 7 to 8½. Repetition for the next morning learnt; Greek and Latin nouns and verbs declined on paper.	Ellis' Exercises, 20 lines.
Tuesday	7½ to 8. Bible reading. 9 to 10. Latin Grammar repetition. 10 to 11. Latin lesson learnt; in this time either words are parsed on paper, or some piece translated. 11 to 12. Latin lesson said. 4 to 6. French and verses. 7 to 8½. Greek Grammar, repetition learnt, and as Monday. *See* Monday	Latin verses, 10 lines (minimum).
Wednesday	7½ to 8. Bible reading. 9 to 10. Greek Grammar, repetition, and Greek lesson learnt. 10 to 11. Greek lesson said. 11 to 12. Arithmetic and Algebra. 2 to 3½. Latin lesson learnt and verses. 3½ to 4½. Latin lesson said. 5 to 6. Latin verses. 7 to 8½. Repetition, Latin Grammar learnt, &c., as Monday.	Latin verses of Tuesday finished and sent in.
Thursday	7½ to 8. Repetition, Latin Grammar. 9 to 10. Repetition continued; Latin lesson learnt. 10 to 11. Latin lesson said. 11 to 12. English History analysed. 4 to 6. French. 7 to 8½. Greek Grammar learnt for Friday, and as Monday.	—
Friday	7½ to 8. Bible reading. 9 to 10. Greek Grammar said. 10 to 11. Greek lesson learnt. 11 to 12. Greek lesson said. 4 to 6. French and verses. 7 to 8½. Latin Grammar learnt for Saturday, and as Monday.	Latin verses, 4 lines to be sent in on Saturday morning.
Saturday	7½ to 8. Bible reading. 9 to 10. Latin Grammar said, and Latin lesson learnt. 10 to 11. Arithmetic. 11 to 12. Latin lesson said. 3 to 5. French, English history analysis, or map. 7 to 8½. English poetry for Monday.	—

Latin	5
Arithmetic	3
French	2
English history	1
Repetition	6
Total	26

The boys in this division, as in the senior division, only go twice a week to French.

The two divisions, especially the senior, are examined on paper at the end of each quarter; the senior regularly, the junior not so; because it is of more use to go through the work of the latter over and over again in the course of the quarter.

For a considerable portion of the summer half-year Tuesday morning, from 11 to 12, is given up to verses, instead of the usual Latin lesson. This becomes more necessary in the summer, because the boys are out in the evening. For the same reason school begins at 2 on Saturday afternoon, instead of 3 during the last twelve weeks of the summer half-year. At the same time, on the afternoon of Tuesday, Thursday, and Friday, they have an hour's work from 4 to 5, instead of two from 4 to 6.

WESTMINSTER.

WEST-MINSTER.

SIXTH FORM, 20 Boys. THE HEAD MASTER.

No. 1.—Lessons and Compositions during the Autumn of 1860.

	Lessons.	Compositions.
Sunday	No lesson.	One Latin essay of at least 30 lines. Set on Friday at noon, for Monday morning. In alternate weeks written translations into Latin prose, from English substituted.
Monday	8 to 9. Repetition of Greek Testament. 10 to 11½. Greek Testament, (2 Corinth.) 11½ to 12½. Davison on Prophecy. 3½ to 5½. Euclid and Algebra, or Higher Mathematics.	
Tuesday	8 to 9. Repetition (Plautus). 10 to 11½. Demosthenes (part of Meidias, and Androtion). 11½ to 12½. Plautius (Trinummus). 3½ to 4½. French. 4½ to 5½. (Composition looked over).	One copy of Latin verses of at least 24 lines alternately original and translated. Set Wednesday for Friday.
Wednesday	8 to 9. Repetition. 10 to 11½. Demosthenes. 11½ to 12½. Plautus. Half Holiday.	One copy of Greek iambics of at least 16 lines, from English. Every third week translation into Greek prose substituted. Set Monday for Wednesday.
Thursday	8 to 9. Repetition. 10 to 11. Demosthenes. 11 to 12. Horace, Sat. ii., iii. to end (at 12, Rehearsal of Speeches). 3½ to 5½. Mathematics.	A saint's day falling at the time of any exercise commutes it for English composition, in verse, usually translation.
Friday	8 to 9. Repetition. 10 to 11. Demosthenes. 11 to 12. Plautus. 12 to 12½. (Speeches). 3½ to 4½. French. 4½ to 5½. Composition Lecture.	
Saturday	8 to 9. Repetition (Latin prose). 10 to 11. Mathematics. 11 to 12. Roman history. Half Holiday.	Epigrams are now and then set, if there be extra pressure of work, in lieu of the longer exercise.

Greek Delectus. 2 to 2½. Preparation of geographical lesson. 2½ to 3. Lesson in geography. 3 to 3½. Preparation of lesson in English history. 3½ to 4. Lesson in English history. 8 to 9. Preparation of lessons.	Latin exercise (Ellis' Exercises).
Tuesday	7¾ to 8½. Repetition of Ovid. 9½ to 10¼. Preparation of lesson. 10¼ to 11. Lesson in Latin. 11 to 11½. Preparation of lesson. 11½ to 12. Lesson in Greek. 2 to 4. French. 8 to 9. Preparation of lessons.	Greek exercise (Howard's Exercises).
Wednesday	7¾ to 8½. Repetition of Ovid. 9½ to 12. Mathematics. Half Holiday. 8 to 9. Preparation of lessons.	A portion of grammar written out and learnt.
Thursday	7¾ to 8½. Repetition of Ovid. 9½ to 10¼. Preparation of lesson. 10¼ to 11. Lesson in Latin. 11 to 11½. Preparation of lesson. 11½ to 12. Lesson in Greek. 2 to 2½. Preparation of grammar lesson, Latin. 2½ to 3. Lesson in grammar. 3 to 3½. Preparation of grammar lesson (Greek). 3½ to 4. Lesson in Grammar. 8 to 9. Preparation of lessons.	Exercises of week corrected.
Friday	7¾ to 8½. Repetition of Ovid. 9½ to 10¼. Lesson in Latin composition (verses). 10½ to 11. Verses. 11 to 12. Examination in work of week. 2 to 4. French. 8 to 9. Preparation of lessons.	Latin exercise, as on Monday.
Saturday	7¾ to 8½. Repetition of Ovid. 9½ to 12. Mathematics. Half Holiday.	—

* These two lessons are done with another master; at these hours I take the 4th Form and some of the 5th also.

FIRST FORM, 10 BOYS. REV. ROBERT R. WATTS.

Lessons and Compositions during the quarter ending December 12, 1861 (the same course is followed throughout the year).

	Lessons.	Compositions.
Sunday	10½ to 11. Collect and gospel. 3 to 4. Scripture history.	Analysis of a short portion of Scripture, shown up on Monday morning.
Monday	7¾ to 8½. Catechism. 9½ to 10. Prepare lesson. 10 to 10¾. Latin Delectus. 10¾ to 11½. Prepare lesson. 11½ to 12. Latin grammar. 2 to 4. History and geography.	Every evening a portion of an exercise from Henry's First Latin Book; a vocabulary of the verbs in the construing lesson for the next day, with a translation of the last lesson.
Tuesday	7¾ to 8½ Grammar by heart. 9½ to 10 Prepare lesson. 10 to 10¾ Greek Delectus. 10¾ to 11½ Prepare lesson. 11½ to 12 Greek grammar. 2 to 4 French or arithmetic.	
Wednesday	7¾ to 8½ Grammar by heart. 9½ to 12 Arithmetic. Half Holiday.	—
Thursday	7¾ to 8½ Grammar by heart. 9½ to 10 Prepare lesson. 10 to 10¾ Latin Delectus. 10¾ to 11½ Prepare lesson. 11½ to 12 Latin grammar. 2 to 2½ Prepare lesson. 2½ to 3¼ Greek or Latin lesson. 3¼ to 4 Grammar prepared and repeated.	
Friday	7¾ to 8½ Grammar by heart. 9½ to 10¾ Prepare lesson. 10¾ to 11 Greek Delectus. 11 to 11½ Prepare work. 11½ to 12 Examined in work of the week. 2 to 4 French or arithmetic.	On Friday evening the exercises of the week written over and corrected.
Saturday	7¾ to 8½ Grammar of the week repeated. 9½ to 12 Arithmetic. Half Holiday.	No exercise on Saturday evening.

UPPER MATHEMATICAL SCHOOL, FIRST DIVISION, 15 BOYS. REV. R. R. WATTS, Mathematical Master.

Lessons.	Compositions.
Sunday. —	—
Monday. —	—
Tuesday - Prepare Euclid, and work examples for Wednesday morning.	—
Wednesday 9.30 to 12, Mathematics.	—
Thursday. —	—
Friday - Prepare Euclid for Saturday morning.	—
Saturday - 9.30 to 12. Mathematics.	—

TABLE D. — CHARTER-HOUSE.

Upper Mathematical School, Second Division, 16 Boys.
Rev. C. R. Dicken, Master of the Second Division of the Upper Mathematical School.

Lessons during the year 1861.

Lessons.	Compositions.
Sunday. —	—
Monday. —	—
Tuesday evening - Preparation of Mathematics for Wednesday morning.	—
Wednesday - 9½ to 10½. Euclid *vivâ voce*, and in writing. 10½ to 12. Colenso's Arithmetic.	—
Thursday. —	—
Friday evening - Preparation of Mathematics for Saturday.	—
Saturday - 9½ to 10½. Euclid *vivâ voce*, and in writing. 10½ to 12. Colenso's Algebra.	—

Upper Mathematical School, Third Division, 21 Boys. Mr. H. T. Forster.

Lessons.	Compositions.
Sunday. —	—
Monday. —	—
Tuesday - Prepare Euclid for Wednesday morning	—
Wednesday - 9½ to 10½. Write and say Euclid. 10½ to 12. Arithmetic and Algebra.	—
Thursday. —	—
Friday. —	—
Saturday - 9½ to 12. Arithmetic and Algebra.	—

Middle Mathematical School, First and Second Division, 38 Boys. Rev. F. Poynder and Mr. J. W. Irvine.

Lessons.	Compositions.
Sunday. —	—
Monday. —	—
Tuesday - Work prepared in evening for following morning.	
Wednesday - First Division. Euclid from 9½ to 12. Second Division. Arithmetic from 9½ to 12.	—
Thursday. —	—
Friday. Work prepared in evening for following morning.	—
Saturday - First Division. Arithmetic from 9½ to 12. Second Division. Euclid from 9½ to 12.	—

Lower Mathematical School, First Division, 7 Boys. Rev. Richard Elwyn, Master of Division.

Lessons.	Compositions.
Sunday. —	—
Monday. —	—
Tuesday - Prepare work for following morning.	—
Wednesday - 9½ to 10¾. Euclid. 10¾ to 12. Arithmetic.	—
Thursday. —	—
Friday - Prepare work for following morning.	—
Saturday - 9½ to 10¾. Euclid. 10¾ to 12. Arithmetic.	—

Lower Mathematical School, Second Division, 15 Boys. Mr. Stewart.

Lessons.	Compositions.
Sunday. —	—
Monday. —	—
Tuesday. —	—
Wednesday - 9½ to 10½. Writing. 10½ to 12. Arithmetic.	—
Thursday. —	—
Friday. —	—
Saturday - 9½ to 10½. Writing and dictation. 10½ to 12. Arithmetic.	—

French, First Division, 28 Boys.

Lessons and Compositions during the Year ended at the Summer Holidays, 1861. Mons. Mariette.

Lessons.	Compositions.

ST. PAUL'S.

Eighth Class, 18 Boys. The High Master.

Lessons and Compositions from June 1860, to June 1861.

	Lessons.	Compositions.
Sunday	No attendance.	
Monday	9.20 to 10. Greek Testament, (St. Paul's Ep.) heard. 10 to 10.40. Plato, Apologia prepared. 10.40 to 11.20. Plato heard. 11.20 to 12. Horace, Sat. prepared. 12 to 12.40. Horace, heard. 12.40 to 1. Next day's work prepared. 2 to 4. Mathematics, Diff. Calculus, hydrostatics, algebra, Euclid, &c.	One Latin, or Greek prose translation of about 20 lines, set on Thursday, given up on Friday morning.
Tuesday	9.20 to 10. Rep. Horace or Virgil, heard. 10 to 10.40. Greek play, Sophocles, Aristophanes, prepared. 10.40 to 11.20. Greek play heard. 11.20 to 12. Cicero de Finibus prepared. 12 to 12.40. Cicero heard. 12.40 to 1. Next day's work prepared. 2 to 4. French, classical exercises looked over.	One copy of Latin hexameters, elegiacs, lyrics, successively, occasionally, but rarely, varied by setting English verse, of about 20 lines set Saturdays, given up the following Saturday.
Wednesday	9.20 to 10. Retranslation, Terence, or Cicero. 10. to 10.40. Greek play prepared. 10.40 to 11.20. Ditto heard. 11.20 to 12. Ter. Andria prepared. 12 to 12.40. Ditto heard. 12.40 to 1. Next day's work prepared. Half Holiday.	
Thursday	9.20 to 10. Retrans. Sophocles heard. 10 to 10.20. Greek play prepared. 10.40 to 11.20. Ditto heard. 11.20 to 12. Horace, Sat. prepared. 12 to 12.40. Ditto heard. 12.40 to 1. Next day's work prepared. 2 to 4. Mathematics, as above.	
Friday	9.20 to 10. Latin or Greek prose, or Wilkins' Greek Prose Exercises. 10 to 10.40. Thucydides prepared. 10.40 to 11.20. Thucydides heard. 11.20 to 12. Cicero prepared. 12 to 12.40. Cicero heard. 12.40 to 1. Next day's work prepared. 2 to 4. French, classical exercises looked over.	One copy of Greek iambics translation of about 20 lines in succession with the Latin verses.
Saturday	9.20 to 10. Latin or Greek verses read over. 10 to 10.40. Greek play prepared. 10.40 to 11.20. Greek play heard. 11.20 to 12. Ter. Andria prepared. 12 to 12.40. Ter. Andria heard. 12.40 to 1. Lessons for Monday prepared. Half Holiday.	One English essay, from six to twelve pages in succession with the Greek and Latin verses.

	20

Seventh Class, 15 Boys. The High Master.

Lessons and Compositions from June 1860 to June 1861.

	Lessons.	Compositions.
Sunday	No attendance.	
Monday	9.20 to 10. Prepare Herodotus lesson. 10 to 10.40. Construe Greek Testament. 10.40 to 11.20. Construe Herodotus. 11.20 to 12. Prepare Virgil. 12 to 12.40. Construe Virgil. 12.40 to 1. Prepare next day's work. 2 to 4. Mathematical lessons.	One copy of Latin verses, hexameters, elegiacs, or lyrics, not less than 12 lines.
Tuesday	9.20 to 10. Prepare Greek play. 10 to 10.40. Say repetition Virgil, and construe Greek play. 10.40 to 11.20. Prepare Horace. 11.20 to 12. Construe Horace. 12 to 12.40. Prepare Virgil. 12.40 to 1. Construe Virgil. 2 to 4. French lessons, classical compositions looked over.	—
Wednesday	9.20 to 10. Prepare Herodotus. 10 to 12.40. Say Horace repetition, and construe Herodotus. 10.40 to 11.20. Herodotus or Virgil prepared. 11.20 to 12. Virgil or Herod. construed. 12 to 12.40. Horace prepared. 12.40 to 1. Same heard, or prepare next day's work. Half Holiday.	One Latin prose translation of about 12 lines.
Thursday	9.20 to 10. Prepare Greek play, Latin prose looked over. 10 to 10.40. Say re-translation of Greek play. 10.40 to 11.20. Greek play. 11.20 to 12. Livy or Virgil prepared 12 to 12.40. Same construed. 12.40 to 1. Prepare next day's work. 2 to 4. Mathematical lessons.	—
Friday	9.20 to 10. Prepare Herodotus. 10 to 10.40. Construe Herodotus. 10.40 to 11.20. Prepare Horace. 11.20 to 12. Construe Horace. 12 to 12.40. Prepare Virgil. 12.40 to 1. Next day's work, or say Virgil or Horace. 2 to 4. French lessons and classical compositions looked over.	—
Saturday	9.20 to 10. Verses looked over, prepare Greek play. 10 to 10.40. Greek play construed. 10.40 to 11.20. Prepare Virgil or Horace. 11.20 to 12. Construe Virgil or Horace. 12 to 12.40. Prepare next day's lessons. 12.40 to 1. Ditto. Half Holiday.	—

Sixth Class, 15 Boys. Rev. J. Kempthorne.

Lessons and Compositions during the Year ending June 1861.

	Lessons.	Compositions.
Sunday.	—	—
Monday	9 to 10.50. Greek Testament. Review of all done the preceding week. Repetition of a few verses in the original (*). 11 to 11.40. Learn Virgil, and a few lines of fair copy of the last verse exercise by heart. 11.40 to 12.10. Say fair copy, and take from dictation the English for a fresh copy; to be shown up Wednesday morning. 12.10 to 1. Say Virgil.	— — Latin Verse.
Tuesday	9 to 9½. Short lesson of Greek Test., and the same every day. 9½ to 10. (*) Repetition of Virgil. Arnold's Prose with fifth class. 10 to 10.50. Learn Livy. 11 to 12. Say Livy. 12 to 1. Learn Xenophon or Plato.	Latin Verse.
Wednesday	9 to 9½. Greek Testament. 9½ to 10. (*) Book work from Arnold's Latin Prose, or an article from Classical Dictionary; then take (from dictation) English for Latin prose, with notes for help. Shown up Friday morning. 10 to 10.50. Say Xenophon or Plato. 11 to 12. Learn Homer or Æschylus. 12 to 1. Say ditto.	— Latin Prose.

TABLE D.

ST. PAUL'S.

	Lessons.	Compositions.
Thursday	9 to 9½. Greek Testament. 9½ to 10.50. Examination, alternate weeks, with the 5th Class, in one Greek and one Latin subject, on the quantity done since last such examination (*vivâ voce* June to Christmas, papers January to June). On intervening days the last papers looked over, or a piece of extempore translation done. 11 to 12. Learn Homer or Æsch. 12 to 1. Say ditto.	—
Friday	9 to 9½. Greek Testament. 9½ to 10. Learn an exercise of Arnold's Greek Prose. 10 to 10.50. (*) Say Xenophon or Plato. 11 to 11½. Arnold's Greek Prose (say). 11½ to 12.10. Learn Virgil. 12.10 to 1. Say ditto.	—
Saturday	9 to 9½. Greek Testament. 9½ to 10. (*) Say retranslation of Livy. 10 to 10.50. (*) Lesson in geography or history alternately. 11 to 1. Composition. An exercise of Arnold's Latin Prose; then fair copy of Latin prose dictated and learnt, and exercises looked over, partly up at class, mistakes having been previously marked for correction. The fair copy partly elicited orally from the boys.	—

SUMMARY OF LESSONS.

Greek Test., 5 short lessons, 1 full ditto.
Greek, 4 } + examinations (= nearly 2 lessons.)
Latin, 3 }
Composition, 3 short, 1 full (not including "retranslation.")
History and Geography, 1 short, 1 full.

* The work marked (*) has been learnt or prepared the evening before, at home.

N.B.—The variations in the authors read, &c., at different periods of the year are not sufficient to necessitate separate Tables. During part of the year Plato's Crito took the place of Xenophon's Cyropædia, and the Persæ of Æschylus, that of Homer.

FIFTH CLASS, 19 BOYS. REV. J. KEMPTHORNE.

Lessons and Compositions during the Year ending June 1861.

	Lessons.	Compositions.
Sunday.	—	—
Monday	9 to 10.50. Greek Testament with 6th Class. 11 to 11.40. Correct (at class) past week's verses. 11.40 to 1. Learn Xenophon and part of lesson in Arnold's Latin Prose.	—
Tuesday	9 to 9½. (*)Short Greek Testament lesson with 6th Class. 9½ to 10. (*) Arnold's Latin Prose with 6th Class. 10 to 10.50. Say Xenophon. 11 to 12. Learn Cicero. 12 to 1. Say ditto.	Latin verses in evening, from T. K. Arnold.
Wednesday	9 to 9½. Greek Testament. 9½ to 10. (*) Repetition of Virgil, and during latter part of year dictation of English for prose, with 6th Class; shown up Friday morning. 10 to 10.50. Learn Xenophon. 11 to 12. Say Xenophon. 12 to 1. Learn Cicero, and write a portion for retranslation.	—
Thursday	9 to 9½. Greek Testament. 9½ to 10.50. Examination alternately with 6th Class (see table of that Class). 11 to 12. Say Cicero and retranslate. 12 to 1. Learn Virgil.	During former half of the year, Latin verses as on Tuesday. Set Thursday, shown up Saturday.
Friday	9 to 9½. Greek Testament. 9½ to 10. (*) Retranslate part of Virgil lesson. 10 to 10.50. Learn Arnold's Greek Prose. 11 to 11½. Say ditto. 11½ to 12.10. Say Virgil. 12.10 to 1. Learn exercise of Arnold's Latin Prose.	—
Saturday	9 to 9½. Greek Testament. 9½ to 10. Learn lesson of grammar. 10 to 10.50. (*) Geography or history with sixth class. 11 to 1. Grammar lesson, and composition with 6th Class, and as in their table.	—

SUMMARY OF LESSONS.

Greek Test., 5 short lessons, 1 full ditto.
Greek, 2 } + examination (= nearly 2 lessons).
Latin, 4 }
Composition, 4 short, 1 full (not including "retranslation.")
History and Geography, 1.

(*) implies "learnt or prepared at home during the preceding evening."

N.B.—In both classes a short lesson of grammar brought up with the first construing lesson of every day except Monday.

FOURTH AND THIRD CLASSES, 40 BOYS. REV. E. T. HUDSON.

Lessons and Compositions during one week in the year ending June 1861.

	Lessons.	Compositions.
Sunday	—	—
Monday	9 to 1. 4th Class. Latin grammar; Bible; Cæsar; verses. 3rd Class. Latin grammar; Bible; nonsense verses; Greek Delectus. 2 to 4. Arithmetic.	—
Tuesday	4th Class. Latin grammar; Cæsar retranslation; Greek Delectus, Arnold. 3rd Class. Latin grammar; Ovid retranslation; Nepos; Greek tree, scan and prove. French.	—
Wednesday	4th Class. Latin grammar; Ovid, Diatessaron verses. 3rd Class. Latin grammar; Nepos retranslation; Ovid.	—
Thursday	4th Class. Latin grammar; Ovid retranslation; Cæsar, Arnold. 3rd Class. Latin grammar; Ovid retranslation; Greek tree; Greek Delectus; scan and prove nonsense verses. 2 to 4. Arithmetic.	—
Friday	4th Class. Latin grammar; Cæsar retranslation; Diatessaron verses. 3rd Class. Latin grammar; Greek Delectus retranslation; Greek tree; Nepos; nonsense verses. 2 to 4. French.	—
Saturday	4th Class. read History of Greece and answer geographical and historical questions; Latin grammar; Ovid, Arnold; Greek grammar repetition. 3rd Class. Latin grammar; Grecian history; Greek grammar repetition.	—

The above represents the work of one week taken at random; of course the same author will not always be construed on the same day of the week. The Greek trees, nonsense verses, and scanning lessons (of the 3rd class) take up only a short time.

SECOND AND FIRST CLASSES, 14 and 16 BOYS. REV. JAMES COOPER.

Lessons and Compositions during the whole Year.

	Lessons.	Compositions.
Sunday.	—	—
Monday	9 to 10. 2nd Class. Exercise (Selæ. c. V. T.), corrected and retranslated; Gospel of Sunday explained. 10 to 11¼. 1st Class. Exercise corrected; Collect repeated; Grammar or Delectus. 11¼ to 12. 2nd Class. Delectus. 12 to 12½. 1st Class. Grammar. 12½ to 1. 2nd Class. Grammar. 2 to 4. 1st and 2nd Class. Barnard Smith's Arithmetic.	—

TABLE D.

ST. PAUL'S.

	Lessons.	Compositions.
Tuesday	9 to 10. 2nd Class. Exercise corrected; grammar.	—
	10 to 11½. 1st Class. Exercise corrected; grammar.	
	11½ to 12. 2nd Class. Selectæ c. V. T.	
	12 to 12½. 1st Class. Grammar.	
	12½ to 1. 2nd Class. Grammar.	
	2 to 4.	
Wednesday	9 to 10. 2nd Class. Exercise corrected; syntax.	—
	10 to 11½. 1st Class. Exercise corrected; grammar or Delectus.	
	11½ to 12. 2nd Class. Delectus.	
	12 to 12½. 1st Class. Grammar.	
	12½ to 1. 2nd Class. Grammar.	
Thursday	9 to 10. 2nd Class. Exercise (Delectus) re-translated and corrected.	—
	10 to 11½. 1st Class. Exercise corrected; grammar.	
	11½ to 12. 2nd Class. Delectus.	
	12 to 12½. 1st Class. Grammar.	
	12½ to 1. 2nd Class. Grammar.	
	2 to 4. Barnard Smith's Arithmetic.	
Friday	9 to 10. 2nd Class. Exercise corrected; syntax.	—
	10 to 11½. 1st Class. Exercise corrected; grammar or Delectus.	
	11½ to 12. 2nd Class. Delectus.	
	12 to 12½. 1st Class. Grammar.	
	12½ to 1. 2nd Class. Grammar.	
	2 to 4.	
Saturday	9 to 10. 2nd Class. Exercise corrected; accidence.	—
	10 to 11½. 1st Class. Exercise corrected; grammar.	
	11½ to 12. 2nd Class. Selectæ. c. V. T.	
	12 to 1. 1st and 2nd Classes. Bible reading.

MERCHANT TAYLORS'.

MERCHANT TAYLORS.'

Head Form, 23 Boys. The Head Master.

Specimen of Lessons and Compositions during the Year ending June 1861.

	Lessons.
Sunday	The school does not assemble on Sundays.
Monday	9½ to 9.25. Prayers.
	9.25. Notes of absences from the whole school brought up to the Head Master for signature.
	9½ to 11¾. Head Master occupied with Head Form.
	9½ to 10¼. Essays given up and looked over by Head Master as far as time will permit in school, remarks made *to each boy* separately. Head Form *generally* preparing Lesson which is either Greek Testament or Hebrew.
	N.B. This is of course varied, if instead of an Essay, a *part* has been set to be said two and two, or by examination of the Form generally.
	10¼ to 11¾. Head Master hears Head Form their lesson.
	11¾. Head Form at French till 12.40, then Prayers; Head Master with part of 6th Form in Hebrew 11¾ to 12.40.
	12¾. Dismissal.
	1¾ to 3¾. Mathematics; Prayers at opening and close.
Tuesday	9½ to 9.25. Prayers.
	9.25. Notes of absences, &c., and exercises of Monitors and Prompters given up.
	9½. Head Master hears *parts* of Monitors and Prompters, two and two; directly a Monitor has said his part, he hears his boy of the Upper Sixth say his, and looks over his boy's exercise.
	10 to 10¼. *Part* construed, &c., as a 1st Lesson, by the Head Form, to Head Master.
	10¼ to 11¾. Head Form occupied in preparing 2nd lesson. Head Master engaged in looking over exercises, calling up boys one by one.
	11¾ to 12.40. Head Master hears 2nd lesson.
	12.40. Prayers.
	12¾. Dismissal.
	1¾ to 3¾. Mathematics and Drawing. Prayers at opening and close.
Wednesday	9½ to 12¾. As on Tuesday. (Prayers as usual.)
	1¾ to 3¾. Mathematics. (Prayers as usual.)
Thursday	9½. Prayers.
	9.25. Notes of absences, &c., Mathematical exercises given up.
	9½ to 10¾. Lesson prepared by Head Form. The Head Master occupied in calling up boys one by one to comment on exercises not looked over by him in school for want of time.
	10¾ to 11¾. Lesson of Head Form construed, &c. to Head Master.
	11¾ to 12.40. Head Form at French.
	12.40. Prayers.
	12¾. Dismissal.
	11¾ to 12.40. Head Master with part of 6th Form in Hebrew.
	1¾ to 3¾. Mathematics. (Prayers as usual.)
	Sometimes on Thursday the Head Master examines one of the Lower Forms from 9½ to 10¾. He is then obliged to work at more of the Head Form's exercises out of school.
Friday	9½ to 12¾. As on Tuesday. (Prayers as usual.)
	1¾ to 3¾. Mathematics and Drawing. (Prayers as usual.)
Saturday	9½ to 12¾. As on Tuesday. (Prayers as usual.) No afternoon school on Saturday.

Summary of Lessons.

It is perfectly impossible for me to give a more accurate account of a week's work than the above. But I have set forth the employment of the Head Form so fully in table C, that I think it can scarcely be necessary. I have only to add here, that as a general rule, if the *part* is from a Latin author, the 2nd lesson is from a Greek author, and *vice versâ*, so that I have always an author of each language in hand at once. I have said also that the *part* consists of about 30 lines of poetry, or a moderate chapter of prose. The 2nd lesson consists of about 60 or 100 lines of poetry, or 3 or 4 chapters of prose.

N.B.—The above arrangement is varied occasionally, if the *part* is some exercise corrected and re-written, or if the morning is occupied, as it sometimes is, in an historical lecture, or a philological paper &c.

Compositions.

With regard to the exercises, I can only make the following statement. As a general rule I set four translations from English every week (for Monday, Tuesday, Thursday, and Friday evening) into Greek prose, Greek Verse, Latin prose, Latin verse, devoting a week to each sort. But (as I observed in Table C. Column 7), this order is broken in upon by translation from Greek or Latin into English, by philological or historical papers, or by a classical essay, &c. On Wednesday evening the exercise is a Mathematical one; and there is no Classical *part* on Thursday morning.

On Saturday is set invariably something of a sacred character, viz., an essay connected with Holy Scripture, or Jewish History, or Christian doctrine, evidences, or Butler, or the XXXIX. Articles, or some Hebrew composition; sometimes a *part* consisting of some passage from Scripture or Greek Testament is set. Sometimes a portion of Scripture has to be read for *viva voce* examination.

The Head Master is not teaching in school in the afternoon, but is occupied from 1 to 3 in looking over the exercises of the Head Form, which cannot be got through in the morning; or in other school business, as seeing parents, and generally superintending the work of the School, or examining a Form.

TABLE D.

MERCHANT TAYLORS'.

Sixth Form, 26 Boys. Rev. C. Crowden, M.A.

Specimen of Lessons and Compositions during the Year ended June, 1861.

	Lessons.	Compositions.
Sunday.		
Monday	9½ to 9.25. Prayers. 9.25 to 10. Articles I.-XXIX. Joshua to II. Kings. 10 to 11. Preparation of Greek Testament. I. & II. St. Peter, St. James, I. Corinthians. 11 to 11¾. The Master hears the lesson prepared. 11¾ to 12.40. A portion of the boys learning Hebrew with the Head Master. The remainder doing composition. 12.40 to 12¾. Prayers.	Latin verse.
Tuesday	9½ to 9.25. Prayers. 9.25 to 10. Repetition and translation of *part*. Hor., Carm. III., and Carm. Sæc. 10 to 11. Preparation of lesson. Soph. Œd. Col. 799 lines; Soph. Antig. 780; Homer Il. II. 11 to 11¾. The Master hears the lesson prepared. 11¾ to 12.40. French. 12.40 to 12¾. Prayers.	Greek prose.
Wednesday.	9½ to 9.25. Prayers. 9.25 to 10. Repetition and translation of *part*. Soph., Œd. Col., 250; Antig. 250. 10 to 11. Preparation of lesson. Thuc. I. 1–27. Herod. VII. 1–39. History of Greece. 11 to 12. The Master hears the lesson prepared. 12 to 12.40. Composition, varied occasionally by a lecture on philology. 12.40 to 12¾. Prayers.	Mathematical exercise.
Thursday	9.15 to 9.25. Prayers. 9.25 to 10. Liddell's Hist. of Rome, XXVIII. to end. 10 to 11. Preparation of lesson. Hor. Epist. I. Sat. II. Virgil, Æn. VIII. 1–519. 11 to 11¾. The Master hears the lesson prepared. 11¾ to 12.40. A portion of the boys learning Hebrew with the Head Master. The remainder doing composition. 12.40 to 12¾. Prayers.	Greek iambics.
Friday	9½ to 9.25. Prayers. 9.25 to 10. Repetition and translation of *part*. Hor. Carm. III. and Carm. Sæc. 10 to 11. Preparation of lesson. Hor. Epist. I. Sat. II. Virgil, Æn. VIII., 1–519. 11 to 11¾. The Master hears the lesson prepared. 11¾ to 12.40. French. 12.40 to 12¾. Prayers.	Latin prose.
Saturday	9½ to 9.25. Prayers. 9.25 to 10. Repetition and translation of Cic. de Am., about 400 lines. 10 to 11. Preparation of lesson. Cic. de Am. Livy I., 1–24. Soph. Antig. 780. 11 to 12. The Master hears the lesson prepared. 12 to 12.40. Lecture on composition. Prose composition, occasionally done by the Master and Form together. 12.40 to 12.45. Prayers.	Articles to be learned, and Scripture lesson to be prepared.

Mathematics - 10 hours per week (in afternoons).

Out of this boys in four highest classes of Mathematics devote 1 hour per week to Drawing.

For Greek prose is occasionally substituted an English essay (generally on subjects connected with the antiquities and history of Greece and Rome).

Passages of Latin and Greek verse are set from time to time to be translated into English verse.

The exercises are set in accordance with the table given above. They are brought to the Master the next morning. They are examined by him, as far as time permits, with the boys individually. In all cases the errors are marked and pointed out to the several writers. In the case of prose compositions, the errors marked by the Master are corrected by the boys. A translation of the passages set both for prose and verse is generally read out and taken down. The passages selected for prose are frequently done by the Master and Form together.

The following system of marking the compositions is adopted. Each exercise when examined is placed in one of 5 classes. When the examination of the whole is completed, the Master compares the exercises in each of the classes and arranges them in numerical order according to their respective merit: *e.g.*, the head boy of class I. is marked 1^1, the boy at the head of class II. 6^2, 7^2, according to the number of boys placed in class I. These marks are entered in a book, and determine the relative position of the boys for the lesson of the day. *Vide* C.

Upper Fifth Form, 31 Boys. Rev. J. A. L. Airey, M.A.

Lessons and Compositions during the year ending at Midsummer, 1861.

	Lessons.	Compositions.
Sunday.		
Monday	9½ to 9.25. Prayers. 9·25 to 10¾. Nicholls' help to the Bible. Corrected exercises repeated memoriter. 10¾ to 11¾. Greek Testament. 11¾ to 12.40. Beatson's Iambic Metre, and Greek Prosody. 12.40. Prayers. 1¾ to 3¾. Mathematics and Drawing, or Arithmetic and Writing.	For Tuesday morning—Translation from some English poet into Latin elegiacs, or hexameters, (from 8 to 12 lines,) to be written at home, brought to school on Tuesday morning, and corrected after "part."
Tuesday	9½ to 9.25. Prayers. 9.25 to 10. "Part" heard. 10 to 10¾. Exercises corrected, individually. 10¾ to 11¾. Hecuba, or Homer. 11¾ to 12.40. Greek iambics, "challenge" exercise. 12.40. Prayers. 1¾ to 3¾. Mathematics, &c.	For Wednesday morning—Two, or more sections (rules and exercises) in Arnold's Latin prose composition, to be written out and learnt, and said in class on Wednesday morning.
Wednesday	9½ to 9.25. Prayers. 9.25 to 10¾. "Part" heard and exercises corrected. 10¾ to 11¾. Virgil or Sallust. 11¾ to 12.40. French. 12.40. Prayers. 1¾ to 3¾. Mathematics, &c.	For Thursday morning Mathematical exercises.
Thursday	9½ to 9.25. Prayers. 9.25 to 10¾. History; corrected exercises repeated memoriter. 10¾ to 11¾. Geography. 11¾ to 12.40. Arnold's Greek Prose Composition and rules. 12.40. Prayers. 1¾ to 3¾. Mathematics, &c.	For Friday morning — Translation from English into Latin prose (from 12 to 20 ordinary octavo lines,) to be written at home, brought to school on Friday morning, and corrected after "Part."
Friday	9½ to 9.25. Prayers. 9.25 to 10. "Part" heard. 10 to 10¾. Exercises corrected. 10¾ to 11¾. Hecuba, or Homer. 11¾ to 12.40. Arnold's Greek Prose ("challenge" exercise). 12.40. Prayers. 1¾ to 3¾. Mathematics, &c.	For Saturday morning—Select sentences from Xenophon's Cyropædia (Huntingford's Introduction,) to be written at home, brought to school on Saturday morning, and corrected, after "part."
Saturday	9½ to 9.25. Prayers. 9.25 to 10¾. "Part" heard, and exercises corrected. 10¾ to 11¾. Virgil, or Sallust. 11¾ to 12.40. French. 12.40. Prayers.	For Monday morning—Epitome of a section from Nicholls' Help to be prepared and read in class.

Sunday.	—	—
Monday	9¼ to 9.25. Prayers. 9.25 to 10½. Collects, &c. repeated. 10½ to 11¼. The Bible read. 11¼ to 12¼. Psalm or Catechism learnt and repeated. 12¼ to 12.40. Preparation for next day, or exercise corrected. 12.40 to 12¾. Prayers.	Exercise written and part learnt at home.
Tuesday	9¼ to 9.25. Prayers. 9.25 to 10.20. Part (Latin grammar) looked over and repeated. 10.20 to 11¾. Exercise corrected or Latin lesson (Henry's 1st Latin Book) said. 11¾ to 12.40. Latin exercise written. 12.40 to 12¾. Prayers.	Do.
Wednesday	9¼ to 9.25. Prayers. 9.25 to 9.50. Part (Latin grammar) repeated. 9.50 to 10.20. Latin lesson (Henry's 1st Latin Book) prepared. 10.20 to 11.40. Exercises corrected and Latin lesson said. 11.40 to 12.40. Latin exercise written. 12.40 to 12¾. Prayers.	Arithmetical exercise.
Thursday	9¼ to 9.25. Prayers. 9.25 to 10.40. Modern geography lesson prepared. 10.40 to 11½. Geography lesson said. 11½ to 12¼. History of England read. 12¼ to 12.40. Preparation for next day, or exercise corrected. 12.40 to 12¾. Prayers.	Exercise written and part learnt at home.
Friday	The same as Tuesday.	Do.
Saturday	The same as Wednesday, till 12.45.	Collect and Psalm or Catechism learnt for Monday.

Summary of Lessons.

Collects, Psalms, Catechism learnt and repeated.
Lesson in modern geography. Reading of history.
Four parts of Latin grammar learnt and repeated.
Four exercises written at home and corrected in school.
Four exercises written and corrected in school.
Two or more Latin lessons.
Arithmetic and Writing, 10 hours per week in the afternoon.

HARROW.

MONITORS and SIXTH FORM, UPPER DIVISION, 30 BOYS.
THE HEAD MASTER.

Lessons and compositions during the year ending July 29, 1861.

	Lessons.	Compositions.
Sunday	3¼ to 4¼. An epistle, with either Paley's Horæ Paulinæ, or Butler's Analogy.	A Latin prose exercise (original or translation from an English author) of at least 40 lines. Subject given at fourth school, Friday. Exercises brought up to the head master at first school, Wednesday.
Monday	7½ to 9. An epistle, with repetition by heart from Scripture of 21 verses, 14 old, 7 new. 11 to 12. Translation on paper from Greek or Latin book, described in Table C. 3½ to 5½. (3 to 5 in summer). Mathematics in two divisions. 5½ to 6½. (5 to 6 in summer). Construing lesson; first 20 lines brought up translated on paper.	Every third or fourth week an English essay of not less than 60 lines takes the place of the above.
Tuesday	8½ to 9. Aristophanes, *Nubes* and *Aves*. Half holiday.	One copy of Latin hexameters or Latin elegiacs (original or translation from any English poet) of at least 26 lines. Subject given at fourth school, Monday. Exercises brought up at first school, Thursday.
Wednesday	7½ to 9. Construing lesson; repetition from Sophocles (iambic lines) of 48 lines, 32 old, 16 new. 11 to 1. Modern languages in two divisions. 3½ to 5½. Mathematics, as on Monday. 5½ to 6½. Construing lesson, as on Monday.	One copy of Greek iambics, almost always translation, generally from Shakspere, at least 20 lines for monitors, 16 lines for others.
Thursday	7½ to 9. Construing lesson; repetition from Virgil of 60 lines, 40 old 20 new. 11 to 12. History, 10 or 12 pages of Guizot's English Revolution, or 12 or 14 pages of Arnold's Rome, Vol. III. Half holiday.	We have generally two translations into Greek prose, and two or three copies of Latin lyrics (original or translation, of not less than 7 stanzas) sent in every school quarter. These take the place of some one of the above-named exercises, generally of the Greek verse or Latin verse.
Friday	7½ to 9. As on Thursday. 11 to 1. As on Wednesday. 3½ to 5½. As on Wednesday. 5½ to 6½. As on Wednesday.	In translations the length of the exercise depends on the length of the passage set.
Saturday	7½ to 9. Construing lesson without repetition; this has subsequently been converted into Homer, with articles from Buttmann's Lexilogus. 11 to 12. Construing lesson; this has subsequently been converted into Homer. Mr. Westcott always takes the Form for me at second school on Saturday.

Total	22

Each of the monitors has in turn his "monitor's week." During this, instead of the regular composition of the week, he does his "monitor's exercise," generally a copy of from 40 to 60 Greek iambics, from a passage selected by himself, and approved by the head master. Special pains are taken with the "monitor's exercise." It is sent in on Saturday.

I may explain that in each week we read only one book for construing, Greek verse, Latin prose, Greek prose, Latin verse, successively. Latterly I have introduced Homer at both schools on Saturday. A book of the Odyssey is read at first school; a book of the Iliad (with Mr. Westcott) at second school; or *vice versâ*.

ADDITIONAL RETURN respecting the COMPOSITIONS for the MONITORS and UPPER SIXTH FORM. THE HEAD MASTER.

I will here explain to the Commissioners our method of looking over the composition of the monitors and Upper Sixth Form. This duty is shared by Mr. Westcott and myself. The first 10 boys in the Form, which consists of 30, come always to me. The remaining 20 go to Mr. Westcott, but in such a manner that one-fourth of this lower division, *i.e.*, five boys, come to me instead in each week; consequently in a month I have taken the composition of every boy in this division. The time which I devote to looking over the exercises with the boys is given above. Tuesday is the morning which I reserve for the variable fourth part of Mr. Westcott's division.

I may add that third school on "whole school days" (Mondays, Wednesdays, and Fridays) is the hour which I devote to examining the lower Forms. My aim is to hear each of these Forms twice during each quarter.

Looking over Composition. Monitors and Upper Sixth.
The Head Master.

Sunday.	—
Monday	10 to 11. One boy, the head of the school, comes for composition.
Tuesday	10. 1st boy from Mr. Westcott's division. 10½. 2nd. 11. 3rd. 11½. 4th. 12. 5th. Two or three of these boys are almost always in the room at once; the composition of the last is never looked over till 1 o'clock.
Wednesday	10 to 12. Three boys of my own division coming respectively at 10, 10½, 11. 12 to 1. A fourth boy.
Thursday	—
Friday	10 to 12. Four boys, coming respectively at 10, 10½, 11, 11½. 12 to 1. A fifth boy.
Saturday	—

Looking over Composition.* Monitors and Upper Sixth.
Mr. Westcott.

Sunday.	—
Monday	10 to 11. Looking over composition (three exercises), two boys. 3 to 4½. Looking over composition (three exercises), three boys.
Tuesday.	—
Wednesday	11 to 1. Looking over composition (three exercises), four boys. 3 to 4½. Looking over composition (three exercises), three or four boys.
Thursday	10 to 11. Looking over composition (three exercises), two boys.
Friday	10 to 11. Looking over composition (three exercises), two boys. 3 to 4½. Looking over composition (three exercises), three boys.
Saturday	12 to 1. Looking over composition (three exercises) two boys.

* Each exercise is, as a general rule, looked over and partly corrected beforehand.

SIXTH FORM, LOWER DIVISION, 31 BOYS. MR. G. F. HARRIS.

Lessons and Compositions during the year ending July 29, 1861.

	Lessons.	Compositions.
Sunday	3¼ to 4¼. Greek Testament, Epistles; with Paley's Horæ Paulinæ.	—
Monday	7½ to 9. Scripture repetition (Collect, Epistle, and Gospel); Greek Testament, Epistles. 10 to 11. English into Greek prose, read *vivâ voce*. 11 to 12. Composition of first half of form looked over. 3½ to 5½. Mathematics, in 2 divisions. 5½ to 6½. Construing lesson, with translation of part of old lesson.	(*a*) Verses, and (*b*) prose exercise set; (*c*) Latin prose of Friday read over, and corrected *vivâ voce*.
Tuesday	7½ to 8¼. Aristophanes, with head master.	—
Wednesday	7½ to 9. Construing lesson. 11 to 12. Modern languages, French or German in 2 divisions. 3½ to 5½. Mathematics, in 2 divisions. 5½ to 6½. Construing, with translation.	(*d*) Lyrics shown up, (*e*) Greek prose corrected *vivâ voce*.
Thursday	7½ to 9. Repetition, 60 lines Latin, 20 new, 40 old; 48 lines Greek, 16 new, 40 old; with construing lesson. 10½ to 11. Construing lesson. 11 to 12. Composition of second half looked over.	(*f*) Lyrics or Greek Iambics alternately set; (7 stanzas or 14 lines); (*g*) prose exercises shown up, English and Latin, original and translation, alternately (30 to 50 lines).

TABLE D.

HARROW.

	Lessons.	Compositions.
Friday	7½ to 9. Repetition, as above; with construing lesson.	(*a*) Latin prose set, about 24 lines.
	11 to 1. Modern languages in 2 divisions.	
	3½ to 5½. Mathematics, in 2 divisions.	
	5½ to 6½. Construing lesson, with translation.	
Saturday	7½ to 9. Repetition, as above; with construing lesson.	(*b*) Verses shown up, elegiacs and hexameters, original and translation, alternately (26 lines).
	11 to 12. Examination in history, *viva voce*, Arnold's Rome 16 to 20 pp.	
	12. Look over common place and translation books.

Fifth Form, First Division, 34 Boys. Mr. Drury.

Lessons and Compositions during the Year 1861.

	Lessons.	Compositions.
Sunday	3½ to 4½. Old Testament, 6 chapters.	——
Monday	7½ to 9. Greek Testament, and repetition of Old Testament.	10½ to 11, Latin prose composition, Latin verses set, Latin theme or English (alternately) set.
	11 to 12. Mathematics.	
	3 to 4. Latin lesson.	
	5 to 6. Greek lesson.	
Tuesday.	——	
Wednesday.	7½ to 9. Greek Grammar and Latin lesson.	Latin verses shown up.
	11 to 12. Mathematics.	
	3 to 4. Modern languages.	
	5 to 6. Greek lesson.	
Thursday	7½ to 9. Latin lesson, and Latin verse repetition.	Themes shown up; 10½ to 11. Greek prose composition; Latin lyrics or Greek iambics (alternately) set.
	11 to 12. Greek lesson.	
Friday	7½ to 9. Latin lesson, and Ancient History.	
	11 to 12. Mathematics.	
	3 to 4. Geography.	
	5 to 6. Greek lesson.	
Saturday	7½ to 9. Latin lesson, and Latin verse repetition.	Lyrics shown up; maps set.
	11 to 12. Modern languages.	

Summary of Lessons.

Divinity, 2½ hours.
Latin lessons, 5 hours.
Greek lessons, 4 hours.
Grammar, history, and geography, and repetitions, 3½ hours.
Mathematics, 3 hours.
Modern languages, 2 hours.

Fifth Form, Second Division, 36 Boys. Mr. Rendall.

Lessons and Compositions during Year ending July 29, 1861.

	Lessons.	Compositions.
Sunday	3½ to 4½. Six chapters of Old Testament history.	One set of hexameters or elegiacs; Latin verse set on Monday at 10½ given up to private tutors on Tuesday evening; one Latin exercise; about 20 lines of prose translation set on Monday at 10½, and given up to the master of form on Tuesday at 11; every 4th week an English or Latin essay of 20 or 30 lines substituted.
Monday	7½ to 9. 30 verses of Greek Testament, with Scripture questions.	
	10½ to 11. Correction and dictation of composition.	
	11 to 12 or 12 to 1. Mathematics.	
	3½ to 4½. 50 lines of Livy, Virgil, Horace's Satires, or Ovid.	
	5½ to 6½. 36 to 40 lines of Æschylus, Homer, Demosthenes.	
Tuesday	——	
Wednesday.	7½ to 9. Repetition of Livy, Virgil, or Ovid, 25 new lines; 1 page of Greek Grammar or 6 pages of history.	
	11 to 12 or 12 to 1. Mathematics.	
	3½ to 4½. Modern languages.	
	5½ to 6½. Same as on Monday, Greek construing.	
Thursday	7½ to 9. 50 lines of Livy, Virgil, Horace, or Ovid; 1 page of Greek Grammar or 6 pages of history.	One set of Latin lyrics 20 lines, or of Greek iambics 10 lines, given up to tutors on Saturday night.
	10½ to 11. As on Monday.	
	11 to 12. As on Monday; between 5½ and 6½ Greek construing.	
Friday	7½ to 9. As on Wednesday, repetition, &c.	One Latin exercise, as above.
	11 to 12 or 12 to 1. Mathematics.	
	3½ to 4½. As on Monday, Latin construing.	
	5½ to 6½. As on Monday, Greek construing.	
Saturday	7½ to 9. Latin construing, Greek prose exercises.	One Greek exercise of about 16 lines, done in school.
	11 to 12 or 12 to 1. Modern languages.

Geography	1	
Grammar (Latin)	2	
Grammar (Greek)	1	
Composition, and Latin and Greek prose	3	
Repetitions	3	
Total	25	

N.B.—This list does not represent the whole amount of weekly school work. There are besides; *e.g.*, a map each week; Latin prose done out of school; exercises of various kinds—as sets of derivations, passages to translate into English (occasionally); also voluntary repetition weekly, &c., in *e.g.* Milton.

These lessons are not all severally an hour long.

Each Form is also examined at the beginning of every term in a portion of English history, prepared during the holidays.

* The lessons in form were similar to the above in the other two school terms (January to March, and April to July, 1861), except that Cæsar de Bell. Gall., Horace's Odes, and Homer's Iliad took the place of Cicero's Orations, Virgil's Æneid and Xenophon's Anabasis, respectively. On Sundays the lessons were from the historical books of the Old Testament from 1 Samuel to 2 Chronicles.

† Modern languages and mathematics are taught by special masters.

Shell, Third Division, 34 Boys. Mr. Farrar.

Lessons and Compositions during the Term, ending Dec. 10, 1861.

	Lessons.	Composition.
Sunday	3½ to 4½. Scripture, History—Joshua, Ezra, Nehemiah, Esther, parts of Daniel.	—
Monday	7½ to 9. Greek Testament and Scripture repetition. (The Gospels, &c.) 10 to 11 or 11 to 12. Modern languages. 3½ to 4½. Greek Grammar accidence. 5½ to 6½. Homer's Iliad, Book VI. Evening exercises of various kinds.	Latin verse—elegiacs, 16 lines. alcaics or sapphics, 16 lines.
Tuesday	8½. Names called over; exercises shown up, &c. 10 to 1. (With private tutors), elegiacs, and Ovid's Fasti. Half Holiday. Evening exercise.	Every week, Latin Prose, occasional themes, translations into English verse, or original English verse. Notes of lessons, abstracts of history. French exercises.
Wednesday	7½ to 9. Horace, construing, and repetition. 10 to 11. Preparation of lessons, with tutor. 11 to 12. Homer, Iliad, Book VI. 12 to 1. Latin prose, *vivâ voce.* 3½ to 4½. Geography (modern). 5½ to 6½. Cæsar de Bell. Gall. Book VII. Evening exercise.	
Thursday	7½ to 9. Mathematics. 10 to 11 or 11 to 12. Modern languages. Half Holiday. Evening exercise.	
Friday	7½ to 9 Mathematics. 10 to 11. Latin Grammar. 11 to 1. Lyrics, with private tutors. 3½ to 4½. Roman history. 5½ to 6½. Homer. Evening exercises.	
Saturday	7½ to 9. Cæsar and Rom. history. 10 to 11. Preparation with private tutors. 11 to 12. Horace, repetition, and construing. 12 to 1. Latin prose, or some variable lesson. Half Holiday. Map.	

Summary of Lessons.

Divinity, 2½ hours.	
Classics (all lessons connected with Latin and Greek, including the hours given to composition with tutors), 17 hours.	A week.
History, 2 hours.	
Geography, 1 hour.	
Mathematics, 3 hours.	
Modern languages.	

Note.—As this table applies equally well to any other term of the year by the substitution of "Cicero" for "Cæsar," and "Xenophon" for "Homer," and "Livy" for "Ovid,"—and as all the authors read during the year are specified in return C., it is superfluous to fill up three such returns.

Shell, Fourth Division, 37 Boys, Mr. Bowen.

Lessons and Compositions during Term ending December 11 1860; the same very nearly applies to the other terms of the year.

	Lessons.	Compositions.
Sunday	3½ to 4½. Historical Scriptures. After school, voluntary repetition of Greek Testament.	
Monday	7½ to 9. Greek Testament, St. Mark, a few chapters, and Scripture repetition. 11 to 12. Repetition of Horace, and Latin Grammar. 3½ to 4½. Horace Odes, Book IV. 5½ to 6½. Xenophon Anabasis, Books V. and VI. (part).	
Tuesday	7½ to 9. French. 10 to 1. [Work with tutor]. Half Holiday.	*Three times* a week exercises bearing on the work in school, parsing, abstracts, translations, &c., occasionally English composition. *Once a week* a map, ancient or modern *Verses* (Latin) are done *twice a week* with the tutor.
Wednesday.	7½ to 9. Horace Repetition, and Greek History. 11 to 12. Xenophon, Anabasis, Books V. and VI. (part). 12 to 1. History (oral). 3½ to 4½. Greek Grammar and Ancient Geography. 5½ to 6½. Cicero, pro lege Manilia.	
Thursday	7½ to 9. Arithmetic or Algebra. 10½ to 11½. Xenophon, Anabasis, Books V. and VI. (part). Half Holiday.	
Friday	7½ to 9. Euclid or Algebra. 10 to 11. Horace repetition and Horace translation, Book IV. 11 to 1. [Work with tutor]. 3½ to 4½. Greek Grammar and Greek History. 5½ to 6½. Cicero pro lege Manilia.	
Saturday	7½ to 9. French. 11 to 12. Xenophon, Anabasis, Books V. and VI. (part). 12 to 1. Grammar, &c., various. Half Holiday.

This return will necessarily differ from the specimen in not setting down a fixed lesson to each hour. The general average of five Latin and five Greek lessons each week is kept so as to have for examination at the end of a half-year of 18 weeks, 18 × 5 Latin and 18 × 5 Greek lessons; but it is often found advisable, particularly when beginning entirely new work of more than usual difficulty, to devote every lesson for a whole week or even for a fortnight to it, until some impression is made upon the boys.

* This was a voluntary lesson given because the form happened to be backward in history.

TABLE D.

RUGBY.

Fifth Form, Second Division, 35 Boys. Mr. Anstey.

Lessons and Compositions during the Year ending at Midsummer 1861.

	Lessons.	Compositions.
Sunday	10½ to 11½. Old Testament, history, or Greek Testament, occasional recapitulation lessons.	
Monday	7½ to 8½. Greek Testament with parallel passages. 4 to 5. Greek play, Homer, Herod., or Demosthenes, 38 lines. 10 to 12. Mathematics, with Greek Grammar repeated. 4½ to 6. Latin or Greek sentences, *vivâ voce*, repeated at a subsequent lesson.	
Tuesday	7½ to 8½. 35 or 40 lines of Greek play, Homer, Herod. or Demosthenes, with Greek Grammar repeated. 10 to 12. Modern languages. Half Holiday. 12 to 1½. Latin verse, elegiacs or hexameters 16 lines (looked over by tutors, and marked when shown up by master of form).	
Wednesday	7½ to 8½. Virgil, Horace, 40 lines, Ovid's Fasti 40 lines, with Latin Grammar repeated. 10½ to 11½. Demosthenes, or Greek play 35 lines, with Greek Grammar repeated. 4 to 5. Cicero's Orat. or Livy, 40 lines with Latin Grammar. 5½ to 6½. Latin sentences *vivâ voce*, afterwards repeated.	
Thursday	7½ to 8½. Ovid's Fasti or Virgil 40 lines, with Latin Grammar repeated. 10 to 12. Modern languages. Half Holiday.	Prose copy set, and done out of school (looked over by tutors, and looked over and marked by master of form.)
Friday	7½ to 8½. History and Geography lesson, 12 to 15 pages. 10 to 12. Mathematics. 3½ to 5. Cicero's Orations or Livy, with Latin Grammar repeated. 5½ to 6. Greek iambic copy.	Prose copy on Thursday, produced and sent to tutors, afterwards (on the following Wednesday) brought to and marked by master of form.
Saturday	7½ to 8½. Cicero's Orations or Livy. 10½ to 11½. Demosthenes, Theocritus, or Greek play, with Greek Grammar repeated. Half Holiday.

* Two of these not entered above, because the time varies.

Lower School, Remove Form, varying from 32 to 40 Boys. Mr. H. Bucholl.

Lessons and Compositions during the year ended at the Summer Holidays, 1861.

	Lessons.	Compositions.
Sunday	10¼ to 11 or 10 to 10¾, varying with the time of morning service in chapel. 1st half-year, 2 Gospels, 3 chapters each lesson; 2nd half-year, Genesis and Exodus, 3 chapters each lesson.	
Monday	7 to 8 or 8 to 9, 3 chapters of Gospels, or Genesis or Exodus, with Sunday's Epistle or Gospel by heart (from the latter part of November to about the end of March, the first lesson begins at 8 instead of at 7 o'clock). 9½ to 10. With the writing master. 10¼ to 12. The construing lessons of preceding week gone over again. 3¾ to 6. (*i.e.*, 3¾ to 4⅝, preparation of lesson, 4½ to 6, lesson heard) Ovid, in Kennedy's Palæstra, and Xenophon's Anabasis on alternate weeks.	
Tuesday	7 to 8 or 8 to 9. Greek or Latin Grammar on alternate weeks. 9½ to 10¼. Preparation of 2nd lesson in school. 10½ to 11½. Second lesson, (verse from Kennedy's Palæstra) heard by the master.	12 to 1½ verse composition, (begun in this form) from literal English given by the master.
Wednesday	7 to 8 or 8 to 9. History: 1st half-year, Markham's England; 2nd half-year, Smith's Greece with the geography of the lesson. 9½ to 10¾. Sets, with modern language masters. 3¾ to 4½. Preparation of 3rd lesson. 4½ to 5½. Lesson heard. 5½ to 6. Verse composition corrected, *i.e.*, Kennedy's Palæstra prose, or Xenophon Anabasis, on alternate weeks.	
Thursday	7 to 8 or 8 to 9. As on Tuesday. 9½ to 10¼. Preparation of 2nd lesson prose from Kennedy's Palæstra, or Xenophon Anabasis, on alternate weeks. 10¼ to 11½. Lessons heard by master.	12 to 1½ prose composition from Bradley's Exercises.
Friday	7 to 8 or 8 to 9. As on Tuesday and Thursday, with verses done by the whole form; whilst these are being done, the boys are all called up, individually, and the lesson heard. 9½ to 10¾. Modern language sets as on Wednesday. 3¾ to 4½. As Wednesday; 4½ to 5½, as on Wednesday. 5½ to 6. Prose composition corrected.	
Saturday	7 to 8 or 8 to 9. As on Friday. 9½ to 10¼. As on Thursday. 10¼ to 11½. As on Thursday.	

Summary of Lessons.

Divinity	2
Greek or Latin including composition	14*
Arithmetic	2
French and German	2
Total	20

Besides these lessons, I have 2 lessons with each of the forms of the Lower School, on Mondays, Wednesdays, and Fridays, *i.e.*, each form on two of these three days, between 11¾ and 1¼, either in classical work, or geography.

Note.—Since I have divided the Upper and Lower Remove, the lessons in the writing school have been Upper Remove, Monday at 9½ to 10; Wednesday at 11½ to 12¼. Lower Remove, Monday 2¼ to 3; Thursday, 3½ to 4.

* On alternate weeks.

Lower School, Fourth, Third, First Form, Mr. Alex. W. Potts' Division, 25 Boys.

Lessons and Compositions during the Year ending Midsummer 1861.

	Lessons.	Compositions.
Sunday	10½ to 11. Repetition of Collect and part of Gospel, with examination in Gospel.	
Monday	7½ to 8¼. Scripture History, examination in portion, &c. 10¼ to 11¼. Greek Delectus. 11¼ to 12½. Arithmetic. 4½ to 6. Palæstra Latina and English verse.	
Tuesday	7½ to 8½. Latin Grammar. 10 to 12½. Bradley's Latin Exercises and Grammar, Delectus.	Bradley's Latin Exercises, six sentences.
Wednesday	7½ to 8½. Greek Grammar. 9 to 9¾. Arithmetic and writing. 10 to 11. French. 4½ to 6. Palæstra Latina, and Tirocinium, and correct exercise.	Bradley's Latin Exercises, six sentences, corrected copy.
Thursday	7 to 8. Latin Grammar. 10 to 11¼. Greek Delectus.	Bradley's Latin Exercises, six or seven sentences.
Friday	As on Wednesday.	Verses from Penrose's Latin verse, from 4 verses upwards; correct exercise.
Saturday	7 to 8. Modern geography. 10 to 11¼. Modern history.

SHOWING

The WORK done with each MASTER by PRIVATE PUPILS out of SCHOOL HOURS within a given period.

ETON.

MR. DURNFORD, Classical Assistant Master. TOTAL NUMBER of PUPILS, 62.

Work done during Michaelmas Schooltime 1861.

	Lessons.	Number of Pupils.
Sunday	8. Greek Testament, Acts of Apostles	19 Upper Pupils.
	9¼. Catechism and Bible	4th Form.
	12. Catechism, Essay on a given subject, read Bible	Remove.
	2. Gospel of St. Luke; each set about an hour, Lower Fifth Form	Lower 5th Form.
Monday	No extra work or private business until the evening usually. Upper Set with Æschylus or Thucydides, and also the Greek play read in school from 7¾ p.m. until 9 p.m.	10 or 12.
Tuesday	No private business unless it should be a holiday, in that case Remove in Sallust. Remainder of time occupied by correcting verses with pupils	About 12 boys.
Wednesday	Private business in the evening for 4th Form Middle Set, and Lower Set of 5th Form; Roman History for 4th Form, Prometheus Vinctus; Alcestus 60 lines, from 6½ to 9	Each Set 12 or 15.
Thursday	Private business in the evening for 2nd and 3rd Set, as above	As above.
Friday	Private business for Upper Set of 5th Form, as on Monday, construing also the Greek play for Saturday	As above.
Saturday	No private business. Time being fully occupied in looking over themes, which I always correct *with* the pupils	—

SUMMARY.

I read in the course of a year with each Set of 5th Form three Greek plays, or an equivalent in Thucydides or Herodotus, independent of composition.

MR. YONGE, Classical Assistant Master.

I have no memoranda of the work done during the Year ending with the Summer Holidays 1861, but the subjoined is a scheme of the regular week's work *at present* (1862). The total number of my pupils is 38.

	Lessons.	Number of Pupils.
Sunday	8. 1st Set, Bible reading and questions.	—
	12. 2nd Set, ditto.	
	2. 3rd Set.	
	7. 4th Set, Greek Testament.	
	8. 3rd Form construe Greek Testament for next morning.	
Monday	9. Remove construé Poetæ, 25 lines.	—
	10. 5th Form construe Homer, 50 lines.	
	12. 4th Form construe Ovid, 20 lines.	
	1½. 3rd Form construe Ovid, 18 lines.	
	2½. 5th Form construe Scriptores Romani, 35 lines.	
	4. Remove, construe Horace, 36 lines, and do. verses.	
	7. 4th Form; do. verses.	
	8. 6th Form construe Sophocles, 60 lines. In the course of the day, 5th Form themes are looked over.	
Tuesday	10. 5th Form construe Virgil, 60 lines.	—
	12. 4th Form, Remove, finish verses. 6th Form themes looked over. 3rd Form construe for next day.	
	7. 5th Form, ditto papers of questions in history or classics.	
	8. Remnants of work finished.	
Wednesday	9. Remove construe Poetæ.	—
	9½. 3rd Form construe extracts.	
	10. 5th Form construe Greek play, 35 lines.	
	12. 4th Form construe Ovid's Metamorphoses, and do 2nd verses.	
	1½. 3rd Form construe extracts.	
	2½. 5th Form construe Scriptores Romani.	
	4. Remove, construe Horace, and partly looked over verses.	
	7. 5th Form do a paper in history or classics.	
	8. 4th Form read Greek history.	
Thursday	10. 5th Form construe Scriptores Græci, 35 lines.	—
	12. Remove construe Scriptores Græci, 30 lines. 4th Form finish verses, and do 2nd exercise and construe.	
	4. 5th Form verses chiefly looked over.	
	7. 5th Form construe Virgil, Georg. III.	
	8. Finish looking over verses. 3rd Form construing of Delectus.	
Friday	9. Remove construe Scriptores Græci, 30 lines.	—
	10. 5th Form, Horace. 70 lines.	
	12. Remove construe Virgil, 30 lines. 4th Form construe Cæsar, 20 lines. Both do Greek exercises. 3rd Form construe extracts.	
	2½. 5th Form construe Scriptores Græci, 35 lines.	
	7. Look over 4th Form exercises.	
	8. Construe 6th Form, Sophocles.	
Saturday	9. 4th Form construe Greek Testament, 12 verses, and Æsop, 12 lines.	—
	10. 5th construe Poetæ Græci, 40 lines.	
	4. Remove do themes, and looked over partly. 4th Form extracts looked over.	
	7. 5th Form construe Virgil, Georg. III.	

MR. JOYNES, Classical Assistant Master. TOTAL NUMBER of PUPILS, 46 (average).

Scheme of Work done during one Week in the Michaelmas Schooltime 1860.

	Lessons.	Number of Pupils.
Sunday	9.50. Sinclair on the Catechism, about 35 minutes	About 25.

SUMMARY.

The books read were—
With 1st Set.—The Gospel of St. Matthew, Epistle of James, Epistle to the Hebrews; Sophocles (Trachiniæ, *Wünder*), (Œdipus Rex, *Wünder*), Demosthenes (de Coronâ).
With 2nd Set.—Euripides (Hecuba, *Major*), Xenophon's Anabasis, Books II., III, IV.; Acts of Apostles.
With Lower Set.—Catechism and Bible History.

MR. BIRCH, Classical Assistant Master. TOTAL NUMBER OF PUPILS, 39 to 44.

Work done during the Year.

Lessons.		Number of Pupils.
Sunday	Three sets—	
	1st Set. Prophets and Kings of Old Testament - - -	1st Set, 7 to 10.
	2nd „ Three Epistles - -	2nd Set, 10 to 15.
	3rd „ The Prayer Book and Catechism. - - -	3rd Set, 15 to 20.
	p.m.	
Monday	8 to 9. 4th Thucydides; part of Æschylus Agamemnon -	1st Set, 4 to 8.
Tuesday	8 to 9. Prom. Vinct. Eclogues -	3rd Set, 9 to 16.
Wednesday -	8 to 9. Modern History, A.D. 1480–1791 - - - -	2nd Set, 8 to 16.
	Books of reference are kept in pupil room, Hallam, Russell, &c., but no manual or cram book.	
Thursday	8 to 9. Modern History, A.D. 1480–1791 - - - -	2nd Set, 8 to 16.
	9½ a.m. Prom. Vinct. - -	3rd Set, 9 to 16.
Friday -	8 p.m. 4th Thucydides; Æschylus Agamemnon - -	1st Set, 4 to 8.

The above hours are variable according to the season of the year. The week here given represents a regular week in October. Add to the above three English essays on historical subjects written in the Michaelmas school time; three in the Easter school time, by all the 5th Form, for a prize (each essay not to exceed 12 pages). Three sets three private business meetings a week.

1*st Set.* Add to this pieces of composition, Greek or Latin, done at their leisure, and brought to tutor during the week.

2*nd Set.* Write their answers to historical questions, and bring each time in books with them.

3*rd Set.* Prepare all work (private) in their own rooms, and without tutor's help; as do the other sets.

MR. C. C. JAMES, Classical Assistant Master. TOTAL NUMBER OF PUPILS, 42 (average number during the year).

Work done during the Year ending Election, 1861.

Lessons.		Number of Pupils.
Sunday	7 in summer. 7½ in winter. II. Gospel of St. Matthew in Greek. 12.10 (or 2 on Sacrament Sundays). III. Scripture History, three chapters set, to be prepared; and Catechism, Collect, Epistle, and Gospel explained. 8 a.m. in summer. 7 p.m. in winter. I. Gospel of St. Luke in Greek.	My pupils are divided into three Sets for Sunday private business, each of from 12 to 15 boys: I. Down to bottom of Middle Division, Remove. II. Down to Lower Remove. III. Down to bottom of 4th Form. For private business on week days I divide my pupils into three sets: I. Down to the bottom of the Upper Division (about 10). II. Middle and Lower Division (about 12). III. Lower boys (about 20). In the summer school time these hours are changed, and I take my Sets of private business at 8 p.m. (8 a.m. till 10 a.m. on holidays) till 4th June. From that time till Election I find it impossible to get any done except occasionally on whole holiday mornings at 8 and 10. I have tried several times to give regular week-day private business to the Lower boys, but have found it impossible to do so without interfering with their time for preparing school work, except when trials are approaching, when they are willing to make a sacrifice in order to be got on in some points which they feel to be weak.
Monday Tuesday	Between Election and Easter (the two winter schooltimes) I set a piece of English to be translated into Greek prose or iambics (alternately) to Set I. (about 10 boys), which is brought to me, and looked over on Tuesday morning. During the summer school time I do not set any.	
Wednesday.	From September to the end of February I set pieces for iambics and Greek prose on Wednesday evenings to Set 2 (12 boys), which they do in pupil room, and I look over when done. For a month before trials (in May and November) I set a Greek grammar paper to be done by Set 3 in pupil room (20).	
Thursday	7. Set 1. (10.) Herodotus, Book VII.; in summer school time, Juvenal. 8. Set 2. (12.) Euripides, Hecuba, from September to end of February; February to Election, Virgil's Eclogues and Georgics.	
Friday -	7. Set 1. (10.) Herodotus, Book VII.; in summer school time, Juvenal. 8. Set 2. (12.) Euripides, Hecuba, from September to end of February; February to Election, Virgil's Eclogues and Georgics.	
Saturday.	None.	

SUMMARY.

Sunday:—
Set 1. About half the Gospel of St. Luke.
Set 2. About 12 chapters of St. Matthew.
Set 3. Most of the historical books of the Old Testament gone through in question and answer.
Catechism frequently said, and explained thoroughly twice in the year; Collects and Epistles commented upon if there is time.

Week days:—
Set 1. Herodoti Lib. VII., ch. 1–105; Juvenal's Satires, I.–VII., and about 18 short pieces of Greek prose and verse composition.
Set 2. Euripides, Hecuba, Virgilii Georgics, Lib. I. and part of II., and about 12 pieces of Greek prose and verse composition.

In this return I have not included the construing of school lessons or the looking over of school exercises. Every construing lesson done in school by the 5th Form (except Divisions 1 and 2), Remove and 4th Form, is previously construed to the tutor, and every Latin composition is previously looked over by him before it is shown up in school.

Every pupil at Eton is treated as a private pupil, and required to attend private business, whether he pays as a private pupil or not. No colleger pays as private pupil. All boys boarding in the house are considered private pupils without extra payment. Oppidan pupils out of the house pay or not, as their parents please, but all are equally required to attend "private business."

MR. STONE, Classical Assistant Master. TOTAL NUMBER OF PUPILS, about 40.

Work done during the Year.

Lessons.		Number of Pupils.
Sunday	1st Set. An hour, usually from 12¼ to 1¾.	
	2nd Set. An hour, usually from 8 to 9.	
	3rd Set. ¾ of an hour, 7¼ to 8.	
Monday	1st Set. 8 to 9 p.m.	
Tuesday	3rd Set. 8 to 9 „	
Wednesday.	2nd Set. 8 to 9 „	
Thursday	Sometimes general work for most promising boys, from 7 to 9 p.m.	
Friday -	2nd Set. 7 to 8.	
	1st Set. 8 to 9.	

SUMMARY.

Sunday:—
1st Set, 5 to 10. Gospel of St. Luke, Ecclesiastes, history, &c.
2nd Set, 12 to 18. Acts of the Apostles.
3rd Set, 10 to 12. Reading portions of the Bible.

Week days:—
1st Set, 5 to 8. Herodotus, Book I., not finished, Ranæ (Aristophanes), composition Greek and Latin, not very regular.
2nd Set, 10 to 12. Alcestis; Xenophon Anabasis, parts of.
3rd Set, 12 to 14. Latin composition and history lessons.

N.B.—The 4th Form rarely have private business in the week days; the extra attention their exercises and lessons demand making up for the loss. This return is necessarily imperfect, as times are often changed, and the numbers in each Set vary.

MR. THACKERAY, Classical Assistant Master. TOTAL NUMBER of PUPILS, 40.

Work done during the Year ending December 1861.

Lessons.		Number of Pupils.*
Sunday -	1 hour. Gospel of St. Luke, and 1st Epistle to the Corinthians; 1st 13 chapters in the Greek; reading illustrative books *e. g.*, Trench on the Parables and Miracles, and Robertson on the Corinthians - -	13
	do. Bible reading, with questions on the History, Geography, and Antiquities, and parts of the Acts of the Apostles in the Greek - - - -	19
	do. Bible reading with questions, and hearing selected passages of Scripture said by heart -	8

* The number of pupils has occasionally varied for each of these subjects, but the above is approximately correct for the year.

TABLE E.

ETON.

Lessons.		Number of Pupils.
Monday	1 hour. Part of Euripides Hecuba, Æschylus Agamemnon (all), Sophocles Antigones, 1st 940 lines, (examination in the Æschylus)	7
	do. Virgil's Eclogues, Euripides Andromache about 1,000 lines	10
Tuesday	do. Part of Cicero's orations in L. Catilinam; Odyssey, Book I. and Book IX., 1st 150 lines	16
Wednesday.	None.	
Thursday	1 hour. Elementary composition in Greek prose and verse	4
	Corn. Nepos; Aristides, Themistocles, Pausanias, (examination in these)	7
	1 hour. Ovid's Fasti, selected portions, occasional papers set in Greek grammar	4
Friday.	The same as Monday.	
Saturday.	None.	

SUMMARY.

Sunday.—Two lessons of Greek Testament and one of Bible history, &c., or vice versa.
Week days.—Six lessons of Greek or Latin authors, Greek composition once a week for boys in particular parts of the school.

Composition in Greek prose and verse every week, set and looked over during two of the three school times in the year.

MR. SNOW, Classical Assistant, TOTAL NUMBER of PUPILS, 32.

Work done during Quarter ending December 13.

Lessons.		Number of Pupils.
Sunday	9½ to 10½. 3rd Set, say collect, read Eccles. history or have Catechism explained, &c.	3 Set - 18
	7 to 8. 2nd Set, construe and have explained Greek Testament, one of the Gospels	2 do. - 12
	8 to 9. 1st Set, construe and have explained Greek Testament, Epistles	1 do. - 2
		32
Monday	First or highest Set attend a lecture in Herodotus from 8 to 9 p.m.	2
Tuesday	All of third Set below Remove fill up and correct when looked over, Greek verb and noun papers from 9½ to 10½.	14
Wednesday	Second set, lower part of 5th Form attend a lecture in Xenophon with viva voce, Greek grammar from 8 to 9 p.m.	10
Thursday	All remove, part of second and third Sets, fill up and correct when looked over Greek verb and noun papers from 9½ to 10½ a.m.	Same as Sunday 2nd Set without upper remove. 8
Friday	First Set attend a lecture in Herodotus from 7 to 8 p.m. varied in alternate weeks by Greek composition.	2
	Second Set attend lecture in Xenophon, &c. varied in alternate weeks by Latin and Greek composition at discretion	10
Saturday	None.	12

SUMMARY.

These times necessarily vary throughout the year, in the summer months the morning hours being almost entirely employed instead of the evening, and the subjects are changed from time to time. I have omitted in this Table all the school work prepared in pupil room, viz., every lesson is construed before it is construed in school by every division, and all the exercises of the third set are done and looked over in pupil room, and all the exercises of the second set looked over in pupil room in presence of the authors, and all the exercises of the first set looked over, not in the presence of the authors unless required.

MR. O. BROWNING, Classical Assistant, TOTAL NUMBER of PUPILS, 40.

Work done during a regular week.

Lessons.		Number of Pupils.
Sunday	9½ to 10½. Lower Fifth, Greek Testament	10
	12½ to 1½. Remove, Bible History	10
	7 to 8. Upper Fifth Form, Greek Testament or Ecclesiastical history	10
	8 to 9. Fourth Form, Bible history	10
Monday	9½ to 11. Various "construing."	10
	12 to 2. Fourth Form, verses and looking over themes.	
	7 to 8. Lower Fifth Form, private business, Greek play, &c.	
	8 to 9. Upper Fifth Form, private business, Tacitus, &c.	
Tuesday	10 to 11. Two first divisions construing.	—
	4 to 6. Fourth Form verses, looking over Remove verses.	
	7 to 8. Looking over verses.	
	8 to 9. French or history, private business with remove and others.	
Wednesday	9½ to 11. As Monday.	—
	12 to 2. Looking over verses.	
	7 to 9. Looking over verses.	
Thursday	9½ to 10½. Looking over verses.	—
	10½ to 11. Construing.	
	12 to 2. Employed more or less in correcting verses.	
	4 to 6.	
	7 to 9.	
Friday	9½ to 11. As Monday.	—
	12 to 2. Fourth Form in pupil room. Look over Greek exercise, &c.	
	7 to 8. Lower Fifth Form, private business.	
	8 to 9. Upper Fifth Form, private business.	
Saturday	9½ to 10½. Fourth Form, construing.	—
	10½ to 11. Fifth Form, construing.	
	12 to 2. Look over themes.	
	7 to 9. Ditto.	

SUMMARY.

	Hours.
Construing	7½
Private business	9
Correcting exercises	22
	38½

MR. ELIOT, Classical Asssistant. TOTAL NUMBER of PUPILS, 40.

Work done during Michaelmas school time 1861.

Lessons.		Number of Pupils.
Sunday	8½ to 9. Scriptural questions set to be shown up the next Sunday, those of the preceding looked over, and Catechism frequently repeated.	Lower Set. from 6 to 10 boys. Upper Set from 10 boys. Middle Set, from 10 boys, according to capability.
	12 to 1. Greek Testament, one of the Gospels, or the Acts.	
	2 to 2¾. One of the Gospels: a chapter, more or less.	
	7 to 8. Or later, assisting boys for school questions.	
Monday	No private business except preparing boys for their trials.	As many as may be going in for their trials.
Tuesday	At different hours according to school work. From 7¼ to 8¼ p.m. One of Virgil's Eclogues, or some easy prose author. In the summer repetition of Greek play in the morning. Juvenal construed by Upper Sets.	Middle Set, number as above.
Wednesday	7¼ to 8¼. p.m. Some Greek play, or Thucydides, or Tacitus, according to the work requisite for the two first divisions of the school, or a second set with Greek play or work for their trials. Sometimes Greek iambics or other composition till 9 p.m.	The Upper and Middle Set are generally subdivided on Wednesday and Friday evening.
Thursday	Much the same as Tuesday, with Latin composition and Greek grammar papers.	As Tuesday.
Friday	Much the same as Wednesday	As Wednesday.
Saturday	From 5 to 6 p.m. Preparing boys going in for trials either by construing or composition	About 10.
	7¼ to 8¼. English History with Fourth Form and Lower School.	

SUMMARY.

The above is the usual work done by me for private business in addition to construing all my pupils below the two first Divisions, and preparing them generally for all their school work. Lower Remove and Fourth Form and Lower School do almost all their composition in the pupil-room. The two first divisions construe all their harder work, such as Greek play, Tacitus, &c. to me; for easier work they come to me at certain times for whatever help they require: all the regular Latin and Greek exercises for school are corrected before shown up.

TABLE E.

ETON.

MR. CARTER, Lower Master. TOTAL NUMBER of PUPILS, 39.

Work done during the Michaelmas school time 1861.

Lessons.	Number of Pupils.
Sunday - 8 to 9. Greek Testament. Acts of the Apostles	14
Sunday - 12 to 1. Old Testament. English	17
Sunday - 7 to 8 p.m. Septuagint. Minor Prophets	8
Monday - Fully employed with school work in pupil-room	—
Tuesday. Do. do.	—
Wednesday - After school hours and work in pupil room	—
Wednesday - 6¾. Greek Play. Hippolytus.	14
Wednesday - 7¾ Thucydides, Lib. I. (One hour each, the amount varying according to the difficulties of the passage.)	8
Thursday - Mainly employed with composition - 7 to 8 p.m. Student's Hume or geography, with maps, done earlier in the week	17
Friday - Same as Wednesday.	—
Saturday School work.	—

SUMMARY.

Extra work in composition and questions given to those who may most require it, or are most likely to profit by it.

MR. WILLIAM LANE HARDISTY, M.A., Assistant, Lower School. TOTAL NUMBER of PUPILS, 31.

Work done during the average of the three terms in the year, three quarters of an hour for each lesson.

Lessons.	Number of Pupils.
Sunday - Catechism and Bible explained	About 10.
Sunday - Greek Testament	About 10.
Sunday - Greek Testament	About 10.
Monday.	—
Tuesday.	—
Wednesday - Virgil's Georgics.	—
Thursday.	About 6.
Friday - Cicero's Select Orations (Head Master's Edition)	—
Friday - Æsch. Agamemnon	About 10.
Friday - Euripides Hecuba	About 3.
Saturday.	About 10.

SUMMARY.

The above does not include extra help to pupils in their composition practice, *e.g.*, Latin prose and verse, or Greek iambics as help may be required by each according to his place in school; or for special examinations, *e.g.* the Newcastle scholarship, &c.

MR. DUPUIS, Classical Assistant in Lower School. TOTAL NUMBER OF PUPILS, 50. All Lower School in 6 Divisions distinguished below as 1, 2, 3, 4, 5, 6 (1 being the highest).

Work done during the Michaelmas Term 1861.

Lessons.	Number of Pupils.
Sunday 9¼ to 10¼. Divisions 2, 3, 4 say by heart 6, 5, 4 verses of a Psalm	30
Sunday Questions on Scripture history given to Divisions 2, 3, 4, 5 (in 2 sets, viz., 1 set to Divisions 2, 3; another set to Divisions 4, 5); the answers to be written (not in pupil-room) and shown up Monday morning before 9 A.M.	Looked over by me during the week.
1. Divisions 5 and 6 say Catechism	6
2¼. Division 1, Greek Testament	14
Monday - 8½ to 10¾. Divisions 5 and 6 do derivations and prepare Tirocinium. Attention exclusive for half an hour.	6
Monday - 10 to 10½. Divisions 3 and 4 construe Kennedy's Palæstra Latina, with parsing	18
Monday - 10½ to 11. Divisions 1 and 2 construe Kennedy's Palæstra Latina, with parsing	26
Monday - 12 to 1½. 1st exercise of Division 1 (or 2) looked over and corrected	14 (or less).
Monday - 1½ to 2. Divisions 3 and 4 construe Ovid, with parsing	18
Monday - 2½ to 3. Divisions 1 and 2 construe Ovid, with parsing	26
Monday - 4 to 5. Divisions 2 (or 3) do Greek nouns (or verbs)	18
Monday - 7 to 9. Divisions 1 and 2 (or 3) do Greek verbs (or nouns)	26
Tuesday 9½ to 10¾. Divisions 4 do verses; Divisions 5 and 6 do exercise (Latin), looked over and corrected	10
Tuesday 12 to 2, or in winter 3½ to 5¾. Divisions 3 and 2 (or part of 2) do verses	20
Tuesday 6¾ or 7 to 9. Divisions 1 and 2 (or part of 2) do verses; Division 4 finish verses	20—24
Tuesday Greek derivations for Wednesday done at home and shown up to me this day.	

Lessons.	Number of Pupils.
Wednesday - 9½ to 10¼. Divisions 5 and 6 do derivations, &c. as on Monday	
Wednesday - Divisions 4 prepare lessons for 11, and Ovid for 1½, construing	10
Wednesday - 9¾ to 10.5. Division 3 construe Greek Delectus, with parsing	13
Wednesday - 10.5 to 10½. Division 2 construe Greek Delectus, with parsing	13
Wednesday - 10½ to 11. Division 1 construe Excerpta Græca	14
Wednesday - 12 to 1½. Division 1 (or 2) finish verses, the same looked over and corrected	14 (or less).
Wednesday - 1½ to 2. Divisions 3 and 4 construe Ovid, with parsing	18
Wednesday - 2½ to 3. Divisions 1 and 2 construe Ovid, with parsing	26
Wednesday - 4 to 5. Some of Division 1 (or 2 or 3) finish verses, and looked over	About 4.
Wednesday - 7 to 9. All who have not finished verses, to finish, to be looked over	About 16.
Thursday 9½ to 10¾. Division 4 do Latin exercise; Divisions 5 and 6, translation of, 12—16 lines of Tirocinium into English.	10
Thursday 12 to 2. or in winter 4 to 6. Divisions 3 and 2 (or part of 2) do 2nd exercise, and some looked over	20
Thursday 6¾ or 7. Divisions 1 and 2 (or part of 2) do 2nd exercise; Division 4 translation about 12—16 lines, of Kennedy's Palæstra Latina into English, derivations as on Tuesday	20—24
Friday - 9½ to 10¾. 9¾ to 10.5. 10.5 to 10½. 10½ to 11. Same as on Wednesday.	
Friday - 12 to 1½. Divisions 1 (or 2) looked over, 2nd exercise	14
Friday - 1½ to 2. Divisions 3 and 4 construe Kennedy's Palæstra Latina	18
Friday - 2½ to 3. Divisions 1 and 2 construe Kennedy's Palæstra Latina	26
Friday - 4 to 5. Part of Division 3 or 2 looked over, 2nd exercise	9
Friday - 7 to 9. Part of Divisions 1 or 2 or 3 looked over, 2nd exercise	17
Saturday 9½ to 10¾. Division, 4, 5, 6 do (Bradley) exercise; same looked over and corrected	10
Saturday 12 to 2. or in winter 3½ to 5¾. Divisions 3 and 2 do (Bradley) exercise; same looked over	24
Saturday 6¾ or 7. Division 1 do exercise; Divisions 4, 5, 6 do Latin nouns or verbs	24
Divisions 1 show up Greek Testament derivations on Saturday.	

SUMMARY.

Division 1 and 2, 12 to 14 hours } per week.
3 and 4, 10 to 12 „ }
5 and 6, 8 to 10 „ }

Number of hours occupied out of school hours (at least) 36 per week.

M. J. T. WALFORD sends a Return for the Lent Schooltime, 1862, not having been appointed until January 1861.

Work done during a regular week.

Lessons.	Number of Pupils.
Sunday - 10 to 10½. A lecture on the special service of the day	16
Sunday - 2 to 2¾. 4th Form construe Greek Testament for Monday morning school	10
Sunday - 7 to 8. 5th Form, lecture on the Acts; 4th Form come to do Sunday question	3
Sunday - 8 to 9. Other 5th Form, preparation for confirmation	2
Monday - 8.50 to 9¾. Remove construe Greek lesson.	—
Monday - 9½ to 10. 5th Form construe Greek lesson.	
Monday - 10½ to 11. Remove construe Latin lesson.	
Monday - 12 to 12½. Remove, another Latin lesson, 4th Form finish verses.	
Monday - 12½ to 2. Look over Remove and 5th Form themes.	
Monday - 2½ to 3. 5th Form construe Latin lesson.	
Monday - 4 to 5¼. 4th Form construe Latin lesson and look over exercises	
Monday - 7 to 9. 4th Form come and prepare mathematical exercises and Greek lesson; look over remainder of 5th Form themes.	

TABLE E.

ETON.

	Lessons.	Number of Pupils.
Tuesday	9½ to 10. 5th Form construe Virgil. 10 to 11. 4th Form construe Greek lesson. 3¾ to 6. 4th Form construe verses, and are looked over then, or exercises and derivations. 7 to 9. 4th Form finish verses, &c., and learn repetition lesson for next morning. 5th Form (some of them) come to do composition or get up work for examination.	—
Wednesday	8.50 to 9½. Remove construe Greek lesson. 9½ to 10. 5th Form construe Greek play. 10½ to 11. Remove construe Latin lesson. 12 to 12½. Remove construe second Latin lesson. 12½ to 2. 4th Form who have not finished verses come. 2½ to 3. 5th Form construe Latin lesson. 4 to 5½. 4th Form construe Latin lesson; looked over. 7 to 9. 4th Form prepare mathematical exercises and Greek lesson. 7¾ to 8¾. 5th Form, private business (Æschylus).	—
Thursday	9½ to 10. 5th Form construe Greek lesson. 10 to 11. 4th Form construe Greek lesson. 4 to 6. 4th Form prepare and construe Greek lesson. 5th Form verses looked over, as also between 12 and 2. 7 to 9. 4th Form prepare Greek lesson; 5th Form come for their verses. Some of 5th Form come for extra composition, and work for examination.	—
Friday	8.50 to 9½. Remove construe Greek lesson. 9½ to 10½. 5th Form construe Horace. 10½ to 11. Remove construe Virgil. 12 to 2. 4th Form construe, and looked over, Arnold's exercise. 2 to 2½. 5th Form construe Greek lesson. 4 to 5½. 4th Form construe Latin lesson (Cæsar) looked over. 7 to 9. 4th Form prepare mathematical exercise and Greek lesson. 7¾ to 8¾. 5th Form, private business (Æschylus).	—
Saturday	9½ to 10. 5th Form construe Greek lesson. 10 to 11. 4th Form construe Greek lesson. 4 to 6. 4th Form construe Latin exercise. 7 to 9. 4th Form looked over and do verses.	—

SUMMARY.

	Hours.
Construing:—	
5th Form	6¼
Remove	3½
4th Form	7¾
Private Business	4½
Looking over Exercises:—About	20
Total	42

MR. WARRE, Classical Assistant, writes:—

"I have had the Fifth Form, which has been during the year about 31 in number, twice if not three times in the week for an hour to do extra classical work, known in the Eton system by the name of private business, but the days and the hours have varied in the different school times; and as during the year required I had nearly all my boys for the first time, I cannot say that I had established a regular system of extra work such as I now have, but was feeling my way. I generally with the upper set read Cicero, Thucydides, and a Greek play, and with the lower sets read Greek play, and from all I exacted translations and extra composition, prose or verse, during the week. I could not specify the work in a tabular manner, owing to the changes which I was constantly obliged to make, as I went rather too hard to work at first and was obliged to modify it afterwards. I may mention however that I read with my pupils a book and a half of Thucydides, two Greek plays, and several parts of others, a book of Livy, an oration of Cicero, a play of Plautus, besides doing translations and Latin and Greek composition extra with them, and some French with the Remove and Fourth Form, which however was not successful, as the little boys have as much school work as they can possibly do well, and could not satisfactorily give their minds to a new subject. (It is possible to keep up French where they have learnt before, but unless it is made a regular part of school work I do not think it can be very successfully taught by the tutors.) Of course all this work which is included under the term "private business" is distinct, and in addition to the regular tutor's work, which is comprised in "construings" for his pupils preparatory for the school work, and to that which is really the great burthen on a tutor at Eton,—the looking over of exercises in prose and verse and correcting them previous to their being shown up in school. When I came here first I was inclined to look upon this as enormous labour with comparatively little results. My opinion is somewhat modified by experience, but still I think it might be arranged so that as much good as is now effected by the system might be attained with less waste of the tutor's time. Taking an average, the amount of work that I do for my pupils (exclusive of the school altogether) in time is about seven hours per diem, certainly not less.

On Sunday I have had four sets of one hour each, in some part of the Greek Testament or Old Testament History."

EDMOND WARRE.

MR. JOHN WILLIAM HAWTREY, Classical Assistant, Lower School, answers:—

"The highest number of my pupils during the year ending the Summer holidays 1861 was 50, the lowest 44.

I have not filled up Table E, as with the exception of a Scripture lesson on Sunday and a portion of Scripture learned by heart, and repeated on that day, my pupils have not time for any instruction beyond that given in the preparation of their school work."

JOHN WILLIAM HAWTREY.

TABLE E.

WIN-CHESTER.

WINCHESTER.

[*The only returns furnished under this head are the subjoined.*]

For the Year ended at the Summer Holidays 1861.

Mr. GRIFFITH, Tutor in Sixth Book. TOTAL NUMBER of PUPILS, 9.

Sunday - None.	—
Monday - 7½ to 8¾. 1¼ hours - - -	3
Tuesday - { 4 to 5. / 7½ to 8¾. } 2½ hours - - -	{ 3 / 3
Wednesday 7½ to 8¾. 1¼ hours - - -	3
Thursday - { 4 to 5. / 7½ to 8¾. } 2½ hours - - -	{ 3 / 3
Friday - { 4 to 5. / 7½ to 8¾. } 2½ hours - - -	{ 3 / 3
Saturday - 7½ to 8¾. 1¼ hours - - -	3

SUMMARY.

10¼ hours weekly.

Nine pupils (of the 6th Form), distributed into three sets of three each; the two higher sets having 1¼ hours' work three times a week, and the third an hour's work three times a week. The work is principally composition, varying according to the requirements of individual pupils. Written translations are also made from authors not read in the school.

For the Year ended at the Summer Holidays 1861.

Mr. C. H. HAWKINS, Mathematical Assistant. TOTAL NUMBER of PUPILS, 5.

Lessons.	Number of Pupils.
Sunday.	—
Monday - { 7½ to 8¾. Trigonometry or algebra, or for an advanced pupil "Conic Sections."	2
Tuesday - { 2 to 3. Arithmetic or algebra -	2
{ 7½ to 8¾. Algebra or trigonometry -	1
Wednesday 7¼ to 1¼. As on Monday - -	2
Thursday - 2 to 3. As on Tuesday - -	Same pupils as on Monday.
Friday - 7½ to 8¾. As on Monday or Wednesday	3 Same pupils as on Tuesday.
Saturday - { 2½ to 3½. / *3½ to 4½. } Algebra and trigonometry -	2 Same pupils as on Monday or Wednesday.
	4 As on Monday and Tuesday Afternoon.

SUMMARY.

Three hours, or two, according to the nature of the work, the position of the boy in the school.

The subjects must vary very much, according to the particular requirements of individual pupils.

For the Half Year ended at the Winter Holidays 1861.

Mr. H. E. MOBERLY, Classical Assistant Master. TOTAL NUMBER OF PUPILS 44.

37 in my school classes, 4th Book, Sen. and Jun. Divisions.
17 Pupils in my house, of whom 7 are not in my Form.

Lessons.	No. of Pupils.
Sunday - { No work done regularly with pupils, except when a confirmation is at hand.	Uncertain.
Monday - { 7 to 8½. Verses sent in by 9 o'clock (Saturday night), looked over and returned to pupils to be corrected. During this time the 7 boys named in the margin, who are above the 4th form, are doing an epigram the subject merely being set by the master of their form of 4 or 6 lines, according to their class, which has to be sent in by 9 the same night.	7
Tuesday - { 4 to 6. In the course of the 2 hours, the boys being with the French masters some one hour, some the other, corrected verses looked over, and the epigram (called a Vulgus) looked over and corrected, to be sent up on Wednesday morning. 7 to 8½. If necessary, the same work.	7
Wednesday- 7 to 8½. An epigram as on Monday.	7
Thursday - { 4 to 6. Translation from English into Latin prose, to be sent in by the evening.	7
Friday - { 4 to 6. Latin prose of Thursday looked over, and given back to be corrected, to be sent in on Saturday. 7 to 8½. Epigram, to be sent in on Monday morning.	7
Saturday - { 7 to 8½. Vulgus (*see* Tuesday), of Friday looked over and given back to be corrected.	7

SUMMARY.

Verses - - - - - -	1 Copy
Latin prose translation - - -	1 Copy
Epigrams - - - -	3 Copies
	5
At certain times of the year instead of the epigrams,	
Lyrics - - - - - -	1 Copy

Occasionally the lesson of the particular form with 2 or 3 pupils, but not regularly.

Observations by Mr. H. E. Moberly.

Table E. is not drawn up very conveniently to make a return for Winchester school.

1. There is no distinction, as, *e.g.*, at Harrow, between school time and pupil room time.

If school work is done with pupils, say those who have just been put up, and find the work difficult, it can only be done at odd times; a quarter of an hour before school, half an hour in the evening between 7 and 8½.

2. Verse composition, above the 4th form, is all original; and all the composition is to be done as the boys can find time between (*a*) 7 and 8½, every week day evening; (*b*) 4 and 6 on Tuesdays, Thursdays, and Fridays; and (*c*) 3 and 5 on Saturdays: each of those times having some other work to be done in them, *e.g.*, morning lines to be learnt, French exercises to be written, and the regular lessons to be done by the classes respectively with the French master, and a map weekly. An industrious managing boy will probably find some additional time, when he has learnt his school lesson. With regard to the verses, most boys will write the requisite number of lines, on an easy subject, punctually and without much difficulty: but with a difficult subject the tutor, besides the after work of looking over several times, &c. will have to furnish what the boys call "notions," or "ideas," and this according to a pupil's place in the school.

3. Recently "tutors' houses," in addition to the head master's, have been opened; and sooner or later some re-distribution of time must take place. If so, besides the school work, time would be appropriated (1) to composition, and (2) to private reading, and this is much to be wished.

In the return of the total number of pupils, I have put down 44, while I appear only to look over the composition of 7; but the fact is the composition, such as it is, of the 4th form (37 boys) comes to me in its rough state. Much of the latter is done in school (*see* return of school lessons). The verses are done from a book (Penrose's Easy Exercises, &c.) Ellis' Exercises I go through with each division; they are written an hour after, sent in, looked over, and given back to be corrected. The verses in the same way are looked over by me and given back to be corrected. The 4th form being the lowest in the school, some boys require the most elementary instruction, not the least laborious part of a tutor's work; but it is impossible to make a return of what must be done here and there, with those who may be placed together to construe and parse, but must be taken individually for the beginning of composition.

Between 5 and 6 (*see* table D.) on Mondays and Wednesdays, another tutor keeps school for me, and gives me some assistance, by looking over a few exercises, if they are done in time.

WESTMINSTER.

[*Only One Return is furnished under this Head.*]

Mr. Andrews, Classical Assistant Master. Total Number of Pupils, 11.

	Work done during the Half-Year ending Whitsuntide, 1861.	Number of Pupils.
Sunday		None.
Monday		7
Tuesday		4
Wednesday		11
Thursday		4
Friday		7
Saturday		None.

No extra lessons, beyond the regular school-work, are done for me by my pupils. Those who are under me are chiefly backward, and in need of special help; and they come to me for assistance in the preparation of the work of their Form, (whether construing or composition,) or else they go over again with me work already done in their form. Each pupil is with me three hours during the week, but not separately, those in the same part of the School being taken together.

Additional Return by Mr. Weare.

I insert here, under Table E., as demanding an account of "*Work out of School Hours*," as follows:—

Total Number of Pupils, Average, 20.

A.—Rehearsals of the *Play* of Terence, or Plautus, for 3 times a week for 2 months (October, December) each year, when performed; such rehearsals varying from ¾ of an hour and an hour, to 2 hours and 2 hours and a half *each*: total number of such rehearsals being generally 22 to 24.

B.—The 2 senior "elections" of the Queen's scholars, of an average 10 each, making 20 of the head boys of the school, attend the Holy Communion in the *Abbey* 4 times a year. The *preparation* for this duty has rested with me. My plan has been to devote the *whole* week before (generally) to it, *i.e.*, the *last hour* of each evening (9.30 to 10.30 p.m.). On the *Monday* and *Tuesday* also generally, *after* the general prayers in the College, I have had the above-named 20 Queen's scholars into my house, and have read to them *written lectures* on the Holy Communion, dwelling *more* on the *personal* duties connected with the rite than on doctrine, though the latter has not been neglected. On the *Wednesday*, *Thursday*, and *Friday* evenings I have had a *catechetical* lecture on the Church catechism, connecting with it the study (in the English) of one of the shorter *epistles*, or the first 8 chapters of the Romans. On the *Saturday* evening I have concluded with a written exhortation lecture.

I have besides required the above 20 Queen's Scholars to bring to me on the Sunday, *written answers* to sundry questions bearing on the Church *catechism* and the *epistle* on hand for the time being; and such exercises (often very promising) I have remarked upon afterwards, and have intimated that I should preserve them.

CHARTERHOUSE.

Mr. Watts, Mathematical Master and Classical Assistant. Total Number of Pupils, 6, during the Quarter ending Christmas 1861, but Number varies from Time to Time.

Work done during Half-year ending December 13, 1861.		Number of Pupils.
Sunday.	—	—
Monday	8 to 9. Four pupils in the work of their forms. 9 to 11. Two pupils in mathematics.	—
Tuesday	These pupils come at the same hours at least four times in the week, occasionally five times.	—
Wednesday		—
Thursday		—
Friday		—
Saturday		—

Mr. Irvine, Classical Assistant Master. Total Number of Pupils 6.

Work done during Half-year ending December 13, 1861.		Number of Pupils.
Sunday	None.	—
Monday	8 to 9. Five pupils in the work of the form. 8 to 10. One pupil; additional assistance in Latin prose and arithmetic.	—
Tuesday	These pupils generally come to me during the above-mentioned hours, four or five days a week.	—
Wednesday		—
Thursday		—
Friday		—
Saturday		—

TABLE E.
HARROW.

HARROW.

Mr. Bradby, Assistant Classical Master. Total Number of Pupils, 40.

Work done during any ordinary Week of Term Time.

	Lessons.	Number of Pupils.
Sunday.	—	—
Monday	9¾ to 10¾. Correct verses with Remove, Shell, and 4th Form pupils	About 20.
	12 to 1. Sixth Form pupils private reading, in a subject fixed by the head master every term, such as Homer's Odyssey, XIII. XIV.; Horace's Epistles, Lib. I.; Theocritus	About 4.
Tuesday	7½ to 8¼. Fifth Form private reading; Homer, 40 lines	About 16.
	10 to 11. Remove and Shell pupils' private reading; Ovid's Fasti, 40 lines	About 14.
	11 to 1. Remove, Shell, and 4th Form composition; Latin verse	About 20.
Wednesday	10 to 11. Remove, Shell, and part of 4th Form pupils to prepare school	About 17.
Thursday	As on Monday.	—
Friday	11 to 1. Remove, Shell, and 4th Form composition; Latin verse	About 20.
Saturday	10 to 11. Preparation as on Wednesday	About 17.

Summary.

Composition of Latin verses	4 hours.
Correction	2 „
Private reading (construing lessons)	4 „
Preparation	2 „
Total	12 „

A great deal of the work done with private pupils consists in looking over and correcting with them the Latin and English essays and Latin and Greek verses of the upper pupils. This is done at odd times, and often in the evening, as occasion serves, and no tabular account of it can be given.

Mr. Bull, Classical Assistant. Total Number of Pupils, 7.

Work done during Year ending August 1861.

	Lessons.	Number of Pupils.
Sunday.	—	—
Monday	8½ to 9½. Sophocles, Ajax	2*
Tuesday	10 to 11. Livy	3
	11 to 1. Verses composition	5
Wednesday.	10 to 11. Preparation for school work	5
Thursday.	—	—
Friday	11 to 1. Verse composition	5
Saturday	10 to 11. Preparation for school work	3

Summary.

Greek and Latin	4
Verse composition	4
Correction of verses done at variable hours	2
Total	10

Besides help and inspection of work during the evenings. During this year I had no 6th Form private pupil.

*5th Form pupils.

Mr. Drury, Classical Assistant. Total Number of Pupils, 32.

Work done during the Year 1861.

	Lessons.	Number of Pupils.
Sunday.	—	—
Monday	11 to 12. Correction of Shell and 4th Form verses done on previous Friday	22
	4 to 5. (in summer, and 4½ to 5½ in winter) Remove and Shell pupils prepare the lesson for ensuing schools, in which I either construe to them, or hear them, at my discretion	16
	9 to 10. Homer's Odyssey or Tacitus; portions of Herodotus	6th Form pupils, 3 or 4.
Tuesday	8 to 9. Orestes of Euripides	5th Form pupils, about 8.
	10 to 11. Ovid's Fasti	
	11 to 1. Correction of 5th Form verses that were finished by previous Saturday night, while Shell, Remove, and 4th Form pupils are doing verses	Remove and Shell pupils, about 16.
Wednesday	10 to 11. Preparation of lessons with Remove, Shell, and 4th Form pupils for ensuing school, as on Monday	19
	12 to 1. Correction of 4th Form themes	
	4 to 5. As on Monday afternoon	
Thursday	12 to 1. Correction of Remove, Shell, and 4th Form verses done on previous Tuesday	22
	9 to 10. Homer's Odyssey or Tacitus; portions of Herodotus	6th Form pupils, 3 or 4.
Friday	10 to 11. Correction of 5th Form verses finished by previous Wednesday night	8
	11 to 1. Shell, Remove, and 4th Form do verses	
	4 to 5. As on Monday and Wednesday afternoons	
Saturday	10 to 11. Preparation of lessons with Remove, Shell, and 4th Form pupils as on Wednesday morning	19

Summary.

Preparation of lessons with Forms below 5th	5 hours.
Verses—(doing and correcting) with the same	6 „
Correction of 5th Form exercises with the same	about 5 „
Private reading with 6th Form	2 „
„ with 5th Form	1 hour.

Total	20

Mr. Farrar, Classical Assistant. Total Number of Pupils, 32.

Work done during any School Term.

	Lessons.	Number of Pupils.
Sunday	None, except when boys are being prepared for confirmation. At such times each tutor takes his own pupils to see that they are properly instructed, every Sunday for some time before confirmation	Singly, or two or three at a time.
Monday	10 to 12. Singly, or by twos and threes, to correct verses	Variable, from 12 to 2.
	12 to 1. Sixth Form, private pupils, in some classical subject, as Homer, Theocritus, Pindar, Horace, &c.	
	4½ to 5½ Preparation work	
Tuesday	7½ to 8½ Private reading with Fifth Form pupils (Homer or Virgil, 40 lines).	About 7 or 8.
	10 to 11. Lower pupils, Ovid's Fasti, Livy, or some easy author	Variable, from 15 downwards.
	11 to 1. Elegiacs; or for the younger boys, hexameters (Bland)	

TABLE E.

HARROW.

Lessons.			Number of Pupils.
Wednesday	10 to 11.	Preparation of school lessons to be said afterwards in form	Variable, from about 15 downwards.
	4½ to 5½.	Preparation of school lessons to be said afterwards in form	
Thursday	10 to 12.	Correction of verses, singly, or by twos and threes	,,
	12 to 1.	Sixth Form, as on Monday	
Friday	11 to 1.	Lyrics (alcaics or sapphics), and for the lower boys, Bland's Hexameters	,,
	4½ to 5½.	Preparation of lesson for Form.	
Saturday	10 to 11.	Preparation of work for Form	,,

Besides the hours mentioned above, a pupil has always the privilege of coming to ask his tutor's assistance at any time. Such assistance is constantly asked, and always gladly given. It may, and often does, extend to work voluntarily undertaken by the boys for prizes in Divinity, natural science, &c. The above table merely represents the necessary hours, but every tutor devotes many more to the private assistance or discipline of the pupils, especially of those in his house. Social intercourse between tutor and pupil is also encouraged as far as possible.

No tabulated account can be given of the variable times spent in looking over Latin and English themes.

Mr. Harris, Classical Assistant. Total Number of Pupils, about 64.

Work done during Half-year ending July 1861.

Lessons.			Number of Pupils.
Sunday.			—
Monday	12 to 1.	Sixth Form, private reading, Homer's Odyssey	14 to 16.
	1½ to 2½.	Correction of 5th Form Lyrics or Greek Iambics	5 to 10.
	4½ to 5½.	Shell pupils preparing lesson for 4th school	23 to 25.
	8½ to 10.	"Idle list," to prepare work for next day	Various.
Tuesday	7½ to 8½.	Fifth Form pupils' private reading, Terence's Adelphi	About 16 or 18.
	9½ to 10½.	Shell pupils' private reading, Ovid's Fasti	About 20.
	10½ to 12½.	Shell and 4th Form to do verses	About 36.
	5 to 6.	Look over 4th Form verses	10 or 12.
	8½ to 10.	"Idle list"	Various.
Wednesday	10 to 11.	Shells and 4th Form prepare lessons for 2nd school	About 36.
	11 to 1.	Fifth Form and lower 6th for themes' and verses' correction	Various.
	1½ to 2½.	Look over Shell verses	,,
	4½ to 5½.	Shells prepare lesson for 4th school	About 20 to 25.
Thursday	12 to 1.	Sixth Form private reading	14 to 16.
	1½ to 2½.	Shell and 4th Form verses corrected	10 to 20.
	5 to 6.		Various.
	8½ to 10.	"Idle list"	
Friday	10 to 11.	Fifth Form verses corrected	5 or 6.
	12 to 1.	Shells and 4th Form to do lyrics	About 36.
	1½ to 2½.	Arrears of verses corrected	Various.
	4½ to 5½.	Shells to prepare lesson for 4th school	About 20 to 25.
	8½ to 10.	Arrears of verses corrected. "Idle list"	Various.
Saturday	10 to 11.	Shell and 4th Form to prepare lesson for 2nd school	About 36.
	1½ to 2½.	4th Form verses corrected	About 10.
	4 to 6.	Shells' lyrics corrected	About 16.

I look over each *exercise* twice or thrice, as may be necessary. When correct, it is written out fair, and the fair copy is sent up with the first copy to the master in school.

During the hour of *preparation of lessons* the boys in the several school divisions are respectively engaged in learning their lessons. I give assistance when it is needed, and in some cases hear a whole lesson construed.

It is impossible to give a summary of a private tutor's work, which varies with the difficulty of particular exercises and with the number of his pupils. In many weeks I give quite the number of hours mentioned above to my pupil-room; sometimes 8 or 10 hours less.

Mr. Holmes, Classical Assistant. Total Number of Pupils, 35.

Work done during Term ending July 29, 1861.

Lessons.			Number of Pupils.
Sunday	None, save in my house,* when I exercise a constant supervision, and when my pupils have access to me at any time		8

* This applies equally to every evening after locking up, when I examine the work of the boys in my house, and if necessary help in the preparation of it.

Lessons.			Number of Pupils.
Monday	9¾ to 1.	Different boys in different forms come at different hours for Latin verse, lyric and elegiac	About 20 in all.
	1½ to 2½.	about, for Greek verse composition.	2 or 3 more.
	4 to 5.	Verses and corrections looked over, and Lower boys prepare 4th school	About 15.
Tuesday	7½ to 8¾.	Fifth Form, private reading, Sophocles, note book examined. (The only portion distinct from school work)	15
	10 to 11.	Remove and Shell, private reading, Ovid's Fasti, note book examined	12
	11 to 1.	Remove and Shell, and 4th Form; Verses, Latin elegiacs	12 + 8 = 20
	4 to 5	occasionally. Verses, finished and corrected	Quite uncertain.
Wednesday.	10 to 11.	Shell and 4th Form, prepare for 2nd school	20
	4 to 5.	As on Monday. Themes looked over, taken in corrected.	
Thursday	9¾ to 1.	As on Monday.	
	2 to 2½	generally. Look over more verses	Quite uncertain.
	4 to 5.	As on Tuesday	Quite uncertain.
Friday	11 to 1.	As on Tuesday, only Latin lyrics (Remove and Shell) Latin elegiacs (4th)	20
	4 to 5.	As on Monday.	
Saturday	10 to 11.	As on Wednesday.	—
	4 to 5,	sometimes to 6, if necessary. As on Tuesday.	

Summary.

Not less than from 20 to 24 hours per week, exclusive of work in the house, which cannot be enumerated.

Mr. Hutton, Classical Assistant. Total Number of Pupils, 16.

Work done during Term ending Midsummer, 1861.

Lessons.			Number of Pupils.
Sunday.			—
Monday	10 to 10½.	Latin verses finished and corrected	13 pupils below 5th Form.
	12 to 1.	Latin verses finished and corrected	
		Each boy does two sets of Latin verses during the week *for* the master of his form, but *with* his tutor. These hours are given to their finishing and correcting.	
	7 to 8.	Construe Terence's Adelphi	3 pupils in 5th Form.
Tuesday	10 to 11.	Construe Ovid's Fasti	9 pupils in Remove and Shells.
	11 to 1.	Latin verses, (differing according to a boy's form)	13 pupils below 5th Form.
Wednesday	10 to 11.	Preparation for next construing lesson done in school, (differing according to the boy's form in school)	13 pupils below 5th Form.
Thursday	10 to 10½.	Finishing and correction of	13 pupils below 5th Form.
	12 to 1.	Latin verses (as on Monday)	
Friday	11 to 1.	Latin verses (as on Tuesday, same hours)	13 pupils below 5th Form.
Saturday	10 to 11.	Preparation for next construing lesson done in school (differing according to the boy's form in school)	13 pupils below 5th Form.

Summary.*

Latin or Greek	4 hours.
Latin composition	7 ,,
Total	11

* Including only regular pupil-room hours. From six to eight hours a week may be added for other hours devoted (especially in the evening) to tutor's work of different kinds.

Mr. Rendall, Classical Assistant. Total Number of Pupils, 42.

Work done during year ended at August, 1861.

Lessons.			Number of Pupils.
Sunday.			—
Monday	12 to 1.	Herodotus II. Homer's Odyssey, XX., XXI., 6th Form	7, 8, or 9.
	7½ to 8½.	Preparation of lessons by younger boys	12 or 13.

TABLE E.

HARROW.

	Lessons.	Number of Pupils.
Tuesday	7½ to 8¾. Homer Iliad, XIX., XX.	15, 16, or 17.
	10 to 11. Ovid's Fasti, I., II., III.	10, 11, or 12.
	4 or 5 hours devoted to looking over verse composition with single boys for the most part, others being sometimes present.	
Wednesday	10 to 11. Assisting younger boys in preparation of lessons	12 or 15.
	11 to 12½. Looking over prose essays with single pupils	1
	7½ to 8¾. Preparation of lessons by younger boys	12 or 13.
Thursday	12 to 1. Herodotus II. Homer's Odyssey, XX., XXI., 6th Form	7 or 9.
	Afternoon and evening, 2 hours, correcting verse composition, and superintending younger boys in preparation	1 12 or 13.
Friday	10 to 11. Correcting verse composition with single boys	1
	11 to 1. Correcting and superintending verse composition	20
Saturday	10 to 11. Superintending preparation of lessons	12 or 15.
	4½ to 6. Correcting composition with pupils singly	12 or 15.

Mr. Steel, Classical Assistant. Total Number of Pupils, 44 (1 not in my house, and 1 my own son).

Work done during Term ending July 29, 1861.

	Lessons.	Number of Pupils.
Sunday	None. My pupils have access to me throughout the evening, and consult me as to sources of information for answers to questions set by their masters, &c. This applies to every evening throughout the week.	43 (one not being in my house).
Monday	10 to 1. Pupils throughout the school, with the exception of the 6th Form, come at different hours for correction of composition	42
	4 to 5. Lessons prepared by lower boys for 4th school. Correction of composition also takes place occasionally	15 boys in Remove and Shell, the 4th Form masters taking charge of their own boys.
	9 to 10. 6th Form, private reading, Homer's Odyssey	2
Tuesday	7½ to 8¾. 5th Form, private reading, Aristophanes' Nubes	9
	8½ to 9. 5th Form, correction of verses	9
	10 to 11. Remove and Shell, private reading, Ovid's Fasti	15
	11 to 1. Remove, Shell and 4th Form, and 3rd Form and 4th division of 5th Form, Latin elegiacs, composition	34
Wednesday	10 to 11. Remove, Shell, and 4th and 3rd Forms prepare lesson for 2nd school.	
	11 to 1. Lower 6th and 5th Form, Latin themes.	
	4 to 5. As on Monday.	
Thursday	12 to 1. Correction of verses with Remove, Shell, and 4th and 3rd Forms	34
	9 to 10. 6th Form, private reading as on Monday, Hom. Odyssey	2
Friday	10 to 11. Lower 6th and 5th Forms, Latin verse correction.	
	11 to 1. Remove and Shell and 4th Form and 4th division of 5th Form, Latin lyrics, or Bland's verses	34
	4 to 5. As on Monday.	
Saturday	10 to 11. As on Wednesday.	——

Summary.

Above 20 hours are thus employed, besides the time given to looking over composition when my pupils are not with me; in all not less than 24 hours.

During this last term, September to December 1861 (not included in the return), I have substituted for the hours of preparation before last school on Monday, Wednesday, and Friday, pupil room from 9 to 10 in the evening, for preparation of lessons for next morning, for all boys in the 4th Form, and for those below the first half in the other forms, with the exception of the 6th and upper 5th Forms.

Mr. Vaughan, Classical Assistant. Total Number of Pupils, about 40 ; but 1 left in the middle of the Term, and 3 others were absent a considerable part from Illness.

Work done during Term ending July 29 1861.

	Lessons.	Number of Pupils.
Sunday P.M.	10 to 10¼. Engaged with younger pupils in two divisions. Those who have not been confirmed come to me to receive instruction of a directly religious kind, or by Scripture questions	1 division - 3 2 „ about 20
	8 to 9 p.m. Younger boys with me preparing Scripture lessons for the next morning	20
Monday	12 to 1. 6th Form pupils to construe Homer's Odyssey, XX., XXI.	4
	4¼ to 5. A small number of younger pupils who are not doing well in their form come to prepare their lessons with me	Variable, 4 to 10.
	8¾ to 9¾. Correcting verses with 5th Form pupils which have been previously looked over privately	11
Tuesday	8 to 9. Sophocles Philoctetes, private reading with 5th Form pupils	15
	10 to 11. Ovid's Fasti, private reading with Remove and Shell pupils	19
	11 to 1. Latin elegiac composition, 4th division 5th Form, Remove, Shell, and 4th Form.	About 28, some generally absent.
	6½ to 7½. Correction of lyric verses, Remove, Shell, and 4th Form	About 24.
	8¾ to 9¾. Correction of Greek or Latin verse composition, under 6th and upper 5th Form, pupils coming separately	8
Wednesday	10 to 11. Remove, Shell, and 4th Form, preparation of lesson for 2nd school	22
	12 to 1. Correcting Latin and English themes of 5th Form pupils, one division each week	About 4.
	4½ to 5. As on Monday.	
Thursday	12 to 1. As on Monday. 6th Form	4
	6½ to 7½. As on Tuesday. Remove, Shell, &c.	24
Friday	10 to 11. As on Monday, 8¾ to 9¾, 5th Form, correction of composition	11
	11 to 1. As on Tuesday, 11 to 1, Latin lyric verses	23
	Correction of composition with under 6th and upper 5th Forms	7
Saturday	10 to 11. As on Wednesday.	——

Summary.

About 20 hours thus employed. But this represents but an imperfect view of the time which is spent with my pupils, who have constant access to me, and who are constantly asking for help in verses, &c. It is impossible to give a very accurate return of the time consumed upon my pupils' exercises, &c., which are often corrected at irregular times; and there is much variety in the hours during the summer and winter terms, the long evenings giving many additional facilities for pupil-room work.

Mr. Watson, Classical Assistant. Total Number of Pupils, 30 to 32.

Work done during Year September 1860, July 1861.

	Lessons.	Number of Pupils.
Sunday	No special work with pupils, except previous to a school confirmation, when I prepare the candidates in my house for several Sundays for about three-quarters of an hour.	——
Monday	12 to 1. Sixth Form pupils construe, *e.g.* Tacitus or Pindar, &c., &c.	From 1 to 5.
	1½ to 3½. Correction of verses with Remove, Shell, 4th Form pupils	Varies from about 15 to 18.
	4½ to 5½. Preparation of 4th school with Remove and Shell pupils	About 10 to 15.
	8 to 9. Shell and 4th Form pupils in my house prepare work for next morning.	

TABLE E.

HARROW.

MR. WESTCOTT, Classical Assistant. TOTAL NUMBER of PUPILS, 41.

Work done during October Term 1861.

	Lessons.	Number of Pupils.
Tuesday	7½ to 8½. Fifth Form pupils construe. *e.g.*, Homer's Odyssey, 35 to 40 lines	About 10.
	10 to 12. Remove and Shell pupils construe Ovid's Fast. II. about 40 lines	About 10 to 15.
	11 to 1. Remove Shell and 4th Form pupils do Latin elegiacs, occasional help is given them. The verses of 6th Form, 2nd Remove, and 5th Form pupils corrected with me	15 to 18.
	8 to 9. Preparation in the evening as on Monday, so throughout the week.	
Wednesday	10 to 11. Remove, Shell, and 4th Form pupils prepare their 2nd school.	15 to 18.
	4¾ to 5½. Remove and Shell pupils prepare 4th school	10 to 15.
Thursday	12 to 1. Sixth Form "private reading" as on Monday	1 to 5.
Friday	11 to 1. Remove Shell and 4th Form pupils do Latin lyrics; correction of verses of 6th, 2nd division, and 5th Form pupils	15 to 18.
	1½ to 3½. Correction of verses of Remove, Shell, and 4th Form pupils, as on Monday	15 to 18.
	4¾ to 5½. Remove and Shell pupils prepare 4th school	10 to 15.
Saturday	10 to 11. Remove, Shell, and 4th Form pupils prepare 2nd school	15 to 18.

SUMMARY.

Sunday	Nil.
Monday	3¾ hours
Thesday	4 „
Wednesday	1½ „
Thursday	1 „
Friday	4½ „
Saturday	1 „
Total	16¼*

The above list of work does not include time spent (from 5 to 6 hours weekly) in looking over and correcting the composition of pupils before it is given back to them; nor help given to pupils occasionally before they go in for any special examination, as in divinity or natural science.

My pupils also have access to me at any time that they require my assistance or advice, and of such help they frequently avail themselves. So that the above abstract only imperfectly represents the sum total of a tutor's work.

* Besides preparation of 1st school in the evening with the boys in my house below 5th Form.

	Lessons.	Number of Pupils.
Sunday	10 to 10¾ "English Form," Gospel of the day repeated and explained; various written questions	6 to 4. (irregular).
Monday	9¾ to 10. Looking over 5th Form composition	1 or 2.
	12 to 1. Sixth Form, private reading, (Horace, Epp. II.)	8
	4½ to 5½. Preparation of work with Shell pupils, looking over 5th Form compositions*	21 3
Tuesday	7½ to 8½, 5th Form. private reading, Homer Iliad, VI., part of VII.	7
	9¾ to 10. Looking over 5th Form composition	1 or 2.
	10 to 11. Shell, private reading, Ovid Fasti (II. III.)	21
	11 to 1. Shell and 4th Form do verses.	26
	4½ to 5½. Correct verses.	
Wednesday	9¾ to 10. Looking over 5th Form compositions	2
	10 to 11. Shell preparation of work.	
	4½ to 5½. (As Monday).	
Thursday	9¾ to 10. As Monday.	
	12 to 1. As Monday.	
Friday	9¾ to 10. As Tuesday.	
	11 to 1. As Tuesday.	
	4½ to 5½. As Wednesday.	
Saturday	9¾ to 10. As Wednesday.	
	10 to 11. As Wednesday.	
	4½ to 5½. As Thursday.

Total	28½

* Every evening I examine the work of the (7) boys in my house and help them in the preparation of it; but the time is not fixed.

RETURN as to Pupil-room Work by Rev. WM. OXENHAM.

In this department my arrangement of hours and labour is in some degree peculiar and differential, owing to two causes. First, because after about 25 years of labour at Harrow in the double capacity usually sustained by a tutor, I seceded from the Form work in school, taking care that it should be efficiently carried on, and at my expense. Secondly, because my pupils are nearly, or entirely, confined to those under my own roof. The times and details of employment with pupils are therefore substantially equal or equivalent to those, for instance, of Mr. Harris's or Mr. Drury's pupil room; but my opportunities of intercourse with these are somewhat different, and (except as to every appointed lesson or exercise, limited by rule, as on Tuesdays, Wednesdays, and Saturdays) the same work may be done at somewhat varying hours, and often more time given to correction of exercises, or as the need may be, than it would be easy for all so to appropriate. But no tabular statement can approach to an explanation of the times and modes, in which attention is given, influence exerted, aid and advice in school or other matters of graver or lighter import supplied to domestic pupils, singly or combined, at the obvious cost, as it ought to be, of privacy, leisure, and freedom. After all that can be definitely stated, a private tutor must be chiefly responsible to the parents, who confide in him, and to his own conscience, for the diligent and faithful execution of his office.

RUGBY.

TABLE E.

RUGBY.

Mr. Charles Evans, Assistant Classical Master. Total Number of Pupils, 52.

Work done during Half-year ending December 1860.

	Lessons.	Number of Pupils.
Sunday	No lessons with private pupils.	
Monday	11½ to 12½. Verse composition, or Iliad, XXII., Middle School	21

Friday	11½ to 12½ As Monday, 11½	25
	12½ to 1½ Aristophanes Vespæ, or Herodotus, II.	15
	8½ to 9½ Grammar, Latin and Greek; with Bradley and Ellis's Exercises	6
Saturday	5½ to 6½ As Tuesday, 5½	6

Summary.

3 lessons a week with each set of pupils.

This summary can do no more than give a general outline of a tutor's work with his pupils. Such work as preparing pupils for confirmation; preparing pupils of different degrees of proficiency for examination at Oxford or Cambridge; helping pupils to fill up gaps left in their early education, is scarcely capable of specification.

*The above numbers are the average numbers of the several sets for the year; exactly, they are 24⅘, 14⅘, 5½, 5½.

Mr. Burrows, Classical Assistant Master. Total Number of Pupils, 50.

Work done during the Year ended at Summer Holidays, 1861.

	Lessons.	Number of Pupils.
Sunday	Divinity with each in turn in the evening.	
Monday	11½ to 12½. Virgil, Æneid IX., 600 lines; Homer's Iliad, Book VI.	25
	12½ to 1½. Aristoph. Vespæ; Herodotus, Book II., 73 chapters	12
	8 to 9½. Lessons for next morning, and composition	10
Tuesday	9½ to 10½. Portions of Thucydides, Virgil, Grote, &c., with composition	3
	7½ to 9½. Latin verses	25 same set as on Monday.
Wednesday	Same as Monday.	
Thursday	Same as Tuesday.	
Friday	Same as Monday.	
Saturday	Any extra work required.	

Mr. T. W. Jex Blake, Classical Assistant Master. Total Number of Pupils, 50.

Work done during the Half-year ending June 1861.

	Lessons.	Number of Pupils.
Sunday (not included in Summary.)	7½ to 9½. (During the 8 weeks preceding the May confirmation) partly individually, partly altogether.	16
Monday	9½ to 10½. Odyssey, part of 6th Form	2
	11½ to 12½. Composition, Middle School	18
	12½ to 1½. Composition, Upper School	19
Tuesday	9½ to 10½. Odyssey, part of 6th Form	11
	10½ to 11½. Composition (individually) Upper School	10
	2½ to 4. Composition (individually) Middle School	18
	6 to 7. Or later in summer, composition (individually) Upper School	9
Wednesday	11½ to 12½. Iliad VI, Middle School	18
	12½ to 1½. Herodotus, Upper School	19
	8¼ to 10. (Minus 10 minutes interval of house prayers) 6th pupils to composition or paper	5
	With backward fellows Latin prose for Oxford matriculation	3
Thursday	9½ to 10½. Odyssey, part of 6th Form	11
	10½ to 11½. Composition (individually) Upper School	10
	6 to 7. (Unless, rarely, got through between 9 or 10½ a.m. on Wednesday) composition (individually) Upper School	9

N.B. Rather less as Examination approaches; rather more if any Pupil is going up for Oxford Scholarship.

MR. BUTLER, Classical Assistant. TOTAL NUMBER of PUPILS, 50.

Work done during the Half-year ending Christmas 1860.

Lessons.	Number of Pupils.
Sunday.	
Monday — 9½ to 10½. Composition; Latin prose	5 (6th Form).
11½ to 12½. Virgil, Æneid, IX., or Latin verse composition	22 (Middle School).
12¾ to 1¾. Aristophanes, Vespæ, or Latin prose composition	23 (Upper School).
Tuesday — 10 to 12. Composition of Upper School pupils (5th and 20) corrected	15 (Fifth and Twenty of Upper School).
2½ to 4. Composition of Middle School pupils corrected	22 (Middle School).
(Say) 7 to 8½. Composition of rest of Upper School corrected	8 (Lower 5th).
Wednesday — 9 to 10. Composition, or Virgil, Georgic II.	5 (6th Form).
11½ to 12½. Virgil, Æneid, IX.	22 (Middle School).
12½ to 1¾. Aristophanes, Vespæ	23 (Upper School).
Thursday — 8¾ to 12. Composition of Upper School pupils corrected; if not finished then resumed on Friday evening for (say) an hour, from 6 to 7	23 (Upper School).
Friday — Same as Wednesday (6 to 7 generally.) Composition of Upper School resumed.	(Same as Wednesday.)
Saturday — 2 to 3 Extra Composition with those who are weak in prose or verse.	

SUMMARY.

Construing (Latin and Greek)	6 hours.
Composition	3 „
Composition, correcting	10½ „
	19½

N.B.—This gives but a poor idea of a tutor's work with his pupils. He is continually helping them in little things, which take up much time, though not admitting of specification.

The *times* of work were the same from Christmas 1860 to Midsummer 1861.

The *work* done was, with 6th, Virgil, Eclogues; with Upper School, Herod., Lib. II., about 70 Chapters; with Middle School, Homer, Il. XXII.

MR. HUTCHINSON, Classical Assistant. TOTAL NUMBER of PUPILS, 50.

Work done during Year 1861.—Aug. to Dec. 1860; Feb. to June 1861.

Lessons.	Number of Pupils.
Sunday.	
Monday — 9 to 10. Aristophanes Vespæ, 1–1,100; Tacitus Annales, XIII.; Cicero pro lege Manilia	4, 6th Form.
11½ to 12½. Virgil, Æneid, IX., 1–620; Iliad, VI.	25, Middle School.
12½ to 1½. Aristophanes Vespæ, 1–1,100; Herodotus II., 72 chapters. (On Monday very frequently do composition with both Upper and Middle School pupils, instead of construing.)	21, Upper School.
Tuesday — 9 to 12. Look over composition of Upper School pupils, taking each separately.	
2½ to 4. Look over composition of Middle School pupils, each one separately.	
Wednesday — 9 to 10. Sixth pupils as on Monday	1
11½ to 12½. Middle and Upper School pupils as on Monday, only always construing	25 / 21
Thursday — 9 to 12. Look over composition of Upper School pupils, each separately.	
Friday — 9 to 10. / 11½ to 12½. / 12½ to 1. As on Wednesday.	4 / 25 / 21
Saturday — 11½ to 12½. Take any pupils in composition who are especially backward (separately).	
12½ to 1½. Look over composition of 6th pupils (separately).	

SUMMARY.

Read with 6th Form pupils	Aristophanes Vespæ, 1–1,100. Cicero pro lege Manilia. Tacitus Annales, XIII. Besides frequent composition and general papers.
With Upper School.	Aristophanes Vespæ, 1–1,100; Herodotus, Book II., 72 chapters (and composition).
With Middle School.	Virgil, Æneid, IX., 1–620; Iliad, Book VI. (and composition).
Average of hours per week, 19 to 20.	

MR. MOBERLY, Classical Assistant. TOTAL NUMBER of PUPILS, 36.

Work done during the Year.

Lessons.	Number of Pupils.
Sunday — None.	
Monday — 11½ to 12½. Homer, (Virgil in the alternate half-year) or Latin verses	26
9½ to 10½. Demosthenes	2
12½ to 1½. Livy (Aristophanes)	1
7½ to 8½. Latin Grammar, &c., Lower School.	7
Tuesday — 2½ to 3½. Correction of composition verse, with Middle School pupils.	
Wednesday — 9½ to 10½. Demosthenes.	
11½ to 12½. Homer, or Virgil.	
12½ to 1½. Livy, or Aristophanes.	
7½ to 1½. Grammar, &c., Lower School.	
Thursday — 2¼ Composition prose and verse (Latin) corrected with Upper School pupils.	
Friday — 9½ to 10½. Demosthenes.	
11½ to 12½. Homer or Virgil.	
12½ to 1½. Livy, or Aristophanes.	
7½ to 8½. Grammar, &c., Lower School.	
Saturday — None.	

SUMMARY.

Homer, &c.	3 hours.
Demosthenes	2¼ „

SUMMARY.

The pupils work separately, each doing what he requires most,—arithmetic, algebra, Euclid, or trigonometry.

Mr. J. M. WILSON. TOTAL NUMBER OF PUPILS, 26 Mathematical, 2 in the Laboratory (8 from Christmas to June 1861).

Work done during the Half-year ending Dec. 1861.

Lessons.	Number of Pupils.
Sunday.	
Monday.	
Tuesday { 11½ to 1½.	
Tuesday { 2½ to 4.	
Wednesday { 7 to 9½. P.M.	
Thursday { 11½ to 1½.	
Thursday { 2½ to 4.	
Friday { 12½ to 1½.	
Friday { 7 to 9½. P.M.	
Saturday { 11½ to 1½.	
Saturday { 2½ to 4.	

Each pupil comes nominally for an hour (generally an hour and a half, occasionally two hours) three times a week. The number of pupils present at any time is very rarely greater than eight. Each is working separately at subjects varying from the differential calculus to vulgar fractions. 17 hours a week are given to 26 pupils. The laboratory adjoins my school, and is open at all times, except Monday afternoon. Pupils work there whenever they please. Tutor in the evenings is in one of the boarding houses where I have eight pupils.

MR. ELSEE, Mathematical Assistant. TOTAL NUMBER OF PUPILS, 20.

F., Foundationers. N., Non-foundationers.

* The Returns supplied by Eton have not furnished materials out of which Nos. 2, 7, and 8 could be completely framed. The † A "Division" does not in these Tables always represent a group of boys ordinarily taught in School by one Master.

F.N., Both Foundationers and Non-foundationers.

Returns from Winchester are imperfect in the information given for No. 2. Harrow is not quite perfect in reference to the same table.

†Two (or sometimes three) small "divisions," or classes designated by distinct names, occasionally form one such group.

- - - - - - Tabular Analysis, No. 2.

APPENDIX P.

STATEMENTS and TABULAR RETURNS received from the Head Masters of Marlborough, Wellington, and Cheltenham Colleges, and LETTER from the Head Master of the City of London School.

THE Commissioners being of opinion that some account of the organization and teaching of Marlborough, Cheltenham, and Wellington Colleges (though these are not within the scope of their inquiry) would afford valuable information and prove useful for purposes of comparison and illustration, a request was addressed to the Head Masters of the two former Colleges for returns similar to those headed C. and D. respecting the several forms or divisions into which they are respectively distributed. In the case of Marlborough this request was subsequently modified on the suggestion of the Head Master, and confined to the matters enumerated in the first paragraph of his letter (9th Sept. 1862). Similar information was also requested from the Head of Wellington College. In each case it was suggested that a letter or statement should be added, pointing out the distinctive features of the system adopted, and the results of its operation as tested by experience. The applications so made were readily acceded to by the Head Masters, and the information received from them is subjoined.

MARLBOROUGH COLLEGE.

MARLBOROUGH. STATEMENT.

LETTER from the Rev. G. G. BRADLEY, Head Master.

Marlborough College,
September 9th, 1862.

MY LORDS AND GENTLEMEN,

IN compliance with your wishes, communicated to me by the secretary to Her Majesty's Commission, I have the honour to enclose certain reports, filled up by myself and my colleagues, which will, I hope, contain the information desired.

These reports consist of,—

1. Forms C. and D. filled up for the Sixth and upper Fifth forms.
2. The same forms filled up for the Modern School.
3. The same forms filled up for one Form, (the upper Shell), as a specimen of the middle, and for another (the lower Shell) as a specimen of the lower part of the school.

In each case we have substituted, for reasons communicated to your secretary, the date of Midsummer 1862 for that of 1861.

Also, I have the honour to enclose,—

4. Form D. filled up for a single half-year (viz. that ending Midsummer 1862) for every form in the school.

I have been informed that it would promote the objects entertained by Her Majesty's Commissioners if I were to accompany these reports with a statement from myself of some of the distinctive features in the system of Marlborough College, as compared with that adopted in other schools.

It is unavoidable that in attempting this I should have mainly in view the system pursued at one special school among the older Foundations. I was myself educated at Rugby, and acted as assistant master in that school under three Head Masters between the years 1846 and 1858, and am consequently far more familiar with and interested in the details of the working of the Rugby system, than those of any other of the older schools.

I may also add that, as a matter of fact, the points of resemblance between the course of instruction pursued at Rugby and that adopted at Marlborough, are unusually numerous. The same grammars, books, even editions, are in use at both schools; in both there is nearly the same relative weight attached to different branches of study: in both the same system, or nearly the same, of periodical Examinations is in force. Lessons are heard on the same plan, and the year is divided in the same manner.

But however great the resemblance, there is one feature in the system of Marlborough which necessarily makes much of the daily life of boys and masters, much of the discipline, much even of the teaching, wholly different from that of Rugby and, at least equally so, of Eton or Harrow.

Elsewhere the boys live in different boarding houses, are separated into distinct societies at meals, at night, and through a large portion of the day, and only meet on the common ground of membership of one school in school hours, and in school amusements, and in the school chapel.

At Marlborough the whole school, with few exceptions, are lodged within the same premises; and all, or nearly all, take all their meals in one hall.

It will be seen at a glance that the difference is of the utmost importance.

Again, elsewhere the Assistant Masters live in their own houses, or in lodgings provided by themselves.

At Marlborough, with the exception of the Head Master, two among the senior Assistant Masters, and the senior writing master, every master resides in rooms in different parts of the college buildings; all meet daily at their meals in a common room, and are in constant and close communication with each other.

These two characteristics of the system pursued here will appear more distinctly from the following statement:—

1. The total number of boys now present at Marlborough is 470:

Of these,

434 live within the College walls.
19 board with the master of the Modern School, but dine in the College Hall.
10 board entirely with the senior Assistant Master.
2 are temporarily accommodated at the house of the Medical Officer of the College.
5 are Home boarders.

470

From this table it follows that the whole school, with the exception of 15, dine together daily, and 434 have all their meals in common.

It is unnecessary to state that the effect of this mode of life, as well as the object originally contemplated by the Founders of the Institution, is greatly to reduce the expense of board and education.

The present terms for board, education, washing, and medical attendance, are,—

For sons of laymen - - 72*l.* 0*s.* per annum.
For sons of clergymen - - 54*l.* 10*s.* „

The number of Masters, members of one or other University, not including the Head Master, and exclusive of the senior and assistant English masters, is 23. Of these, as stated above, two only reside in their own houses; the rest as stated above, are lodged and boarded in and by the college.

The following is the manner in which the work of instruction is divided among the Masters.

Distribution of the school for purposes of instruction.

The whole school is for purpose of instruction divided into three Divisions.

A.—The Upper School consisting of,—

*1.	The 6th form - - -	35 boys.
2.	The upper 5th form - -	24 „
3.	The middle 5th form -	26 „
4.	The lower 5th form - -	27 „
5.	The upper shell - -	30 „
6, 7.	The upper 4th in two parallel divisions - -	58 „
8.	Middle 4th - - -	27 „
9.	Lower 4th - - -	29 „
10.	Upper 3rd - - -	20 „
11.	Lower 3rd - - -	29 „
	In all -	315

B.—The Modern School, consisting at present of 62 boys, and thus arranged,—

1.	The modern 5th form -	23 boys.
2.	The modern upper 4th -	18 „
3.	The modern lower 4th -	21 „
	Total -	62

* The usual number of the Sixth Form is 30, the present number is exceptional and temporary.

MARLBOROUGH. STATEMENT.

C.—The Lower School, consisting of,—

1. The lower shell	-	30 boys.
2. The upper 2nd	-	31 "
3. The lower 2nd	-	19 "
4. The 1st form	-	13 "
In all	-	73

Each of these forms, and each division of a form, has its own master.

There are then, exclusive of the Head Master,—

17 Form Masters (all members of the University, except the master of the lowest form in the lower school, who is also assistant writing master).
4 Masters whose work is entirely or almost entirely mathematical.
1 Composition Master and Assistant Master to the sixth form.
1 Master who takes private pupils in the highest forms and gives instruction in modern history and literature.
1 Master who acts as Librarian and assists in modern language instruction.
1 Writing Master.

In all 25 assistant masters.

There is also a resident Physician attached to the College and accommodated in a house on the College premises, who fills the office of Medical Officer and also of Lecturer on Chemistry.

The manner in which the School is arranged for instruction in Mathematics and Modern Languages is shown on a separate Report, which I have the honour to enclose.

The time devoted to Mathematics and Arithmetic is in the Upper and Lower School four hours per week.

The time devoted to French in the same parts of the school is two hours per week. German is taught without extra charge, but is not part of the regular school work.

The hours given per week to Mathematics, French, and German in the Modern School will be found in the Reports from that Department. In both departments foreign languages are taught by Englishmen.

Division of the school by houses.

The above is the distribution of the School for purposes of instruction. For other purposes the distribution is wholly different.

All boys within the College precincts reside in one of three blocks of building.

One of these is devoted to the Lower School exclusively.

The other two are divided into three portions respectively; each of these three portions is called a House, and is under the charge of a House Master.

Every new boy, or every boy on his leaving the lower school, is assigned to a special House Master, chosen as far as possible by his parents or friends; each House Master receives Upper and Modern School boys without distinction, and fulfils permanently towards the boys in his own house the same duties of general care and superintendence as devolve on the Boarding-house Master at Rugby or Harrow, excepting that all questions of providing food and meals are entirely in the hands of other authorities, such as the Bursar and Steward, and that a House Master is only in certain cases private tutor to his boys.

From these statements and from the reports enclosed the following results will be clear:—

First. It will be evident that the number of Assistant Masters is unusually large at Marlborough.

2ndly. Being, as they must be, from the very nature of the system, with scarcely an exception, unmarried, and resident as above described in the college, their average age is far below that of Assistant Masters at the older schools.

3rdly. From the same circumstance the total amount of their remuneration is generally speaking smaller, and the average duration of their stay is shorter than at the older schools. No less than 15 of our present staff have been appointed by myself since June 1858.

4thly. As a consequence of the larger number of Masters, the number of boys in each form is proportionally smaller.

Besides which I may remark, not expressing approval or disapproval, but as a fact:—

First. That each Assistant Master is responsible for the whole correction of the Composition of his Form.

2ndly. That the Private Tutor system is different from what it is elsewhere, the number of boys having such assistance being only 189, and the fee (below the sixth form) only 5*l.* per annum.

3rdly. That in all Forms places are taken, and promotions made by the combined result of half years' work and examination; even in the Sixth Form places are changed on the same principle; in the lower division, half yearly, in the upper, yearly.

4thly. That owing mainly to the special circumstances above described the general work of the school is probably more systematized in some points than would be feasible elsewhere.

This arises partly perhaps as the natural effect of the close intercourse which is the result of so large a number of masters being in constant communication with each other; partly from a practice long prevalent here of periodical and special inspections of the school, conducted by the Head Master and called *Reviews*.

School "Reviews."

As the practice is one in its main features peculiar, I believe, to this school, and intimately connected with the working of our system, I may do well to describe it.

At the close of about every month, (eight times in the year,) the Head Master hands over the highest Form either to the Composition Master or to special Examiners, as the case may be, and devotes from three to five days to his Review.

Four times each half-year.

At the end of the first five weeks in each half year the whole school Upper, Lower, and Modern, is "reviewed" or inspected; the two former in Latin and Greek construing, the latter in Latin only.

A month later, one half of the upper and lower school are examined in Latin and Greek grammar. And again a month later the other half are similarly examined.

At the end of the half year the whole School, Modern, Upper, and (as a rule) Lower, below the Sixth Form is examined in History in the same manner.

The manner of proceeding is as follows:—at a certain hour, each Form in its turn comes before the Head Master; a list is placed before him of the names of the boys in the Form, and the amount of work in the subject of the Review which has been done in the Form; opposite each boy's name is entered his place in order of merit for the last month, and a short, but sufficient account of his regularity, industry, and conduct.

The Head Master with this by his side, examines every boy before him in the subject of the Review, whatever that may be, paying the utmost attention to the answer, and recording on the same sheet of paper his impression of the performance of every boy. The time consumed in the inspection of a form is about two hours.

At the conclusion of the "Review," two measures are taken:—

1. A report is sent home by the house master of every boy, including both the report submitted to the Head Master at the Review, and the remarks entered by the latter on that occasion, and a special half-holiday is given to those who passed creditably, one or more forfeited by those who have failed.

2. The Head Master on every occasion draws up a general report of the review for the perusal of the Masters; it is the custom to point out with the utmost freedom any deficiencies that have been noticed; and this report is entered in a book kept for the purpose, and laid on the table in the Masters' common room.

It will be seen at a glance that such a practice is of the utmost importance as a characteristic of our system.

1. It brings every boy in the school necessarily and repeatedly into personal contact with the Head Master.

2. It enables, and in fact compels the Head Master to examine frequently the assistant masters' account of each boy's progress, and to test it himself.

3. It points out any weak points in the instruction, and even in the discipline, of any part of the school.

4. It acts as a great incentive to industry on the part of the boys.

5. It plays a most important part in *systematizing the work of the school;* for instance, in the Grammar Review, the amount of grammar to be done in each form is matter of careful and concerted arrangement, and the examination searching and thorough. And in other subjects the Head Master is enabled to see at once whether a due gradation of work is observed in the respective forms, and to guard against the danger of a boy's going over the same ground oftener than is desirable, reading for instance the same portion of History repeatedly, or learning his Latin and Greek grammar in a disjointed and fragmentary manner.

The two other points distinctive of the Marlborough system are:—

1. That adopted with regard to the Lower School.
2. The institution of a Modern School.

Lower School.

The first of these can be very shortly described; it is in fact intimately connected with the fundamental characteristic of the school organization mentioned above.

The younger boys live in a separate house, one of the three mentioned above, to the number of about 85 or 90, under the care of the Master of the Lower School; they attend the College Chapel with the rest of the school, are reviewed as the others by the Head Master, and take their meals in the Hall with the rest of the school.

Some of the sixth form have studies and sleep in the Lower School House and assist the Masters in maintaining discipline, &c.; but no boy between the sixth form and the lower school is allowed to enter it without express permission.

Their half holidays and "fag days" do not correspond with those of the Upper and Modern schools; so that it constantly happens that the younger boys are out in the afternoon when their seniors are in, and vice versâ.

They have their own ground for cricket and football.

There is no precise limit of age for the Lower School; a boy who is too backward for the Upper School, and has become too old or too big for the Lower School, is placed in a form at the bottom of the Upper School, which is treated as parallel in work with the highest form in the Lower School, but is instructed and boarded with the Upper.

The age of the boys in the Lower School varies from 10 to 14.

Modern School.

Lastly, this College differs from, at all events, the older schools, in the establishment of a separate department called the Modern School.

A detailed account of the subjects taught and system pursued in this department will be laid before the Commissioners by the masters engaged in it. I shall only add a few words on this subject.

1st. It is to be remembered that the institution is still considered by us as more or less *tentative and experimental*, and that, therefore, the mode of conducting it is modified or altered as we gain experience.

2nd. *That the Department is small;* it contains generally about 70 or 80 boys, no one being allowed to join it till he has reached the fourth form in the classical department.

The object of the Modern School is twofold:—

1st. To prepare boys for definite examinations in which they would not succeed if they competed direct from the classical school.

2nd. To attempt to solve in some degree the question often asked, How far is it possible to give a really good public school education, on any other basis than that of instruction in the dead languages?

With regard to the first of these two objects there can be no doubt as to the result; six candidates from our modern school have competed at Woolwich in the present year. All but one were successful at their first attempt, and scarcely one of them could have succeeded had they remained in the classical department.

I imagine, however, that it is the other question which will appear of more importance in the eyes of Her Majesty's Commissioners.

I do not believe that we are at present in a position to answer the question finally and decidedly, for the experiment has not yet been fairly tried, but I may state briefly my own opinion. While I should deliberately prefer as the best education, where attainable, that mixture of careful study of the language and substance of the great writers of antiquity, with modern reading and mathematics, which I attempt to combine in my own teaching, yet I believe that a thoroughly sound education may be given, and at the same time the advantages of public school life enjoyed by boys with whom, for various reasons, a different plan is pursued, a large space devoted to mathematics and science, and a thorough study of German and French substituted for classics.

But the difficulties of working out this experiment are great.

In the first place, who is to teach the modern languages substituted for classics, taught by men who have devoted years to the study of the classics?

1st. If foreigners, the answer is decisive and final. A foreigner, in the vast majority of cases, cannot control, understand, or stimulate a large class of English boys, and a public school cannot be worked by individual teaching, or by teaching in very small classes.

2nd. Again, an English parent must naturally prefer seeing his son educated by Englishmen. Questions, too, of difference in religion, &c., would be found of some practical importance.

3rd. There remains the very fatal objection that a foreigner, from his comparative unfamiliarity with English, does not enter into the difficulties, or fairly estimate the relative importance of the mistakes, of an English boy; he does not teach him our language from the English point of view, and is in a position, as a teacher, very much less favourable than that of an educated English master who has attained his knowledge step by step by the very same process as his pupils are pursuing.

For these reasons I believe that the experiment can only be fairly tried by leaving, at all events, the most important part (in an educational view) of the modern language teaching in the hands of Englishmen, who have received, if possible, a classical education, and have engrafted on this a systematic knowledge of a foreign language.

Such men are at present extremely rare: were we to lose our present Master of the Modern School at Marlborough, I should find it far more difficult to fill his place as an instructor than to replace the best classical or mathematical scholar; and so long as it is almost infinitely difficult to find a teacher of modern languages equally well trained and disciplined with the teachers of the ancient languages, it is clear that the educational value of the one study can hardly be practically compared with that of the other. It is quite possible to secure good mathematical and scientific masters, and so to fulfil one practical object of the institution of a Modern School, viz., the obtaining success at Woolwich and elsewhere; but to fulfil the other object, to give a broad, humanizing, and literary education, worthy of being in any respect compared to that which a sixth form boy who gains a scholarship at the University has received from his school, is rendered specially difficult from the force of circumstances, from the paucity of men qualified, in any true sense of the word, to educate him.

It remains to notice certain points whose bearing on the general question of a Modern School will be at once recognized as equally important with questions of instruction properly so called.

First, as regards discipline, in this respect there is no distinction whatever between the "Upper" and the "Modern" Schools.

The members of both live together without distinction in the same houses, under the personal care of the same House Masters. In all questions of the arrangement of boys in dormitories or at meals no distinction of "Modern" or "Upper" is recognized; school rules are precisely the same for both; the Modern School (with the exception, I regret to say, of those who are preparing for Woolwich,) contribute their full share to the school, "Eleven" and other organizations which originate with the boys themselves, and, lastly, with regard to that portion of the discipline of the school which is entrusted to the Sixth Form, or Prefects, they stand on precisely the same footing, practically and theoretically, as the parallel forms in the Upper School.

Secondly, as regards personal connexion with the Head Master. It will be noticed that there is no Modern Sixth Form, and on this point a few words of explanation may be necessary.

1. The boys at the head of the Modern School are, as a rule, considerably younger than those who are preparing for the University in the Upper School.
2. It is very rarely that any member of the Modern Fifth could feel that, had he remained in the Upper School, he would have been a member of the Sixth Form. For a good classical scholar would prefer to compete at Woolwich or elsewhere direct from the Sixth Form, joining, as in such cases he is permitted to do, the Modern School in certain lessons only. Experience proves that, *if a good classical scholar*, he is likely to take a high place at Woolwich by following this course.

On the other hand, where the age, character, and attainments of a Modern School boy are such as to justify the step, he is made a Prefect by a special act of the Head Master. The result of this is that he is at once admitted to all the privileges and duties of a Sixth Form boy, and in certain lessons, such as Old and New Testament, joins the Sixth Form in work done with the Head Master.

At the same time it is to be remarked that all members of the upper part of the Modern School are in one respect favourably placed as compared with members of the parallel part of the Upper School. They are all for an unusually long period under the much valued supervision of one Master, the Master of the Modern School; this connexion is less transitory than that between a boy and his Form Master in the Upper School, and closer than can possibly exist between the Head Master and any portion of the school below the Sixth Form.

That the forms in the Modern School should be less frequently examined by the Head Master than the rest of the school is unavoidable. Few classical scholars would be

MARLBOROUGH. STATEMENT.

competent to sift thoroughly (and superficial examinations are greatly to be deprecated) the more advanced work of well-taught boys in mathematics or even German; and it is to be remembered that a Head Master's time is incessantly occupied not only in the instruction of his own form, the largest and most important in the school, but in all the multifarious duties of his post. It is enough, I think, that he should regularly and thoroughly examine the historical and classical work of the Modern Department.

With regard to the class of boys who join the Modern School, I may refer the Commissioners to Mr. Bright's letter. They will there find a statement of one of the main difficulties with which such departments must contend. I cannot state this more clearly than by the following comparison:—In my own Sixth Form, consisting of over 30 boys between the ages of 16 and 19, nearly every boy is destined for the Universities, and the system of teaching requires very little adaptation to special circumstances; but in Mr. Bright's Form, considerably smaller in number, special preparation is required for boys destined for India, Woolwich, civil appointments of various kinds, Cambridge, Sandhurst, and ordinary professional or commercial life.

The grounds on which boys are admitted into the Modern School are very various. In a large number of cases a definite preparation for a definite purpose is required; in others it is felt, and experience justifies the anticipation, that a boy who makes little progress in classics but evinces some talent for mathematics, history, or modern Language, is likely to receive a better education by the change; but we are more and more coming to the conviction that it is most unadvisable to admit boys merely because they are not going to the University and are backward alike in classics and in other studies. If any one thing could be fatal to a Modern School it would be the allowing it to be the refuge for dullness and idleness.

I may therefore conclude the remarks which in obedience to the invitation of the Commissioners I have made on this subject, by stating that in spite of all the difficulties with which we have had to contend, and of some which we are by degrees overcoming, I am entirely convinced that the general result is most valuable, so valuable that I should deeply deplore the abandonment from any cause of the experiment. I may sum the general results, positive and negative, as follows:—

The unity of the school is in no way broken up by the existence of the Modern School, as regards either its relation towards myself, or towards the rest of the school.

Some boys who would lose self respect and suffer greatly from continuing in a part of the school below their real powers, are enabled to take a good and creditable place in the school, and even to distinguish themselves both here and at the University.

A definite and successful preparation for a large and increasing number of openings in life is secured at a much smaller outlay than at a private tutor's, and with all the advantages of public school life.

And finally the amount and quality of the work done in the Modern School is with few exceptions, and those yearly decreasing, quite on a level with that done in the Upper School. There is no longer any inducement to an idle boy to enter the Modern Department. Indeed in the case of those preparing for Woolwich the work is unduly severe. It is surely a matter for just regret that a boy who wishes to qualify himself, by the help of modern subjects, for the active life of an officer in the Artillery or Engineers should be compelled to do so at the cost of renouncing almost entirely all participation in the active and out-door organization and amusements of the School, and this at the very age when such employments are of the utmost value to his physical and moral and social development.

I might enter at much greater length into these and similar subjects, but have already exceeded the limits which I had proposed, and must plead as my excuse not only the express invitation of Her Majesty's Commissioners, but also the exceeding importance and interest of the question. I will conclude my notice of our Modern School, and of the experiment which is being there carefully carried out, by venturing to remark that its success must depend to a degree, difficult for any one but ourselves to realize, on the character of the examinations at Woolwich and elsewhere. Parents do not send a promising boy into the modern department on theoretical grounds; they look forward, with us at least, to his competing at some examination, exactly as the father of a boy in the sixth form intends him to try for a scholarship at the University.

It therefore is a matter of vital importance to those who are anxious for something more than mere competitive success, that the manner in which these examinations are conducted, the number of subjects enforced, and the value attached to different subjects, but above all the nature of the questions which are set and the indication which they give of the view taken of the subject by the examiner, be such as to encourage a thorough knowledge of the subjects of the examination and discourage all "cram" or superficial and hastily acquired knowledge. We at least earnestly desire that a boy who takes a high place at Woolwich should do so without either overloading his brain with ill-digested knowledge, or abandoning school games and manly exercises, but that he should enjoy every advantage of public school life as much as his schoolfellow who at the same age obtains a Scholarship at the University.

I enclose the reports mentioned in the first page, as also a conspectus of the divisions of the Upper and Lower Schools under the head of Mathematics and French, and have the honour to remain,

My Lords and Gentlemen,
Your most obedient Servant,
G. G. BRADLEY,
Master of Marlborough College.

CONSPECTUS OF MATHEMATICAL AND FRENCH DIVISIONS.

In Mathematics the College is divided into 25 forms thus:—

Mathematics.

A	3 Forms	60 boys	taken from	6th Form and Upper 5th Form.
B	4 „	84 „	„	Middle and Lower 5th Forms and Upper Shell Form.
C	6 „	115 „	„	Upper Middle and Lower 4th Form.
D	3 „	60 „	„	Upper and Lower 3rd Forms.
Lower School	4 „	92 „	„	Lower Shell, Upper and Lower 2nd and 1st Forms.

French.

A	3 Forms	50 boys	taken from	Upper 5th and Middle 5th Form.
B	3 „	58 „	„	Lower 5th and Upper Shell Forms.
C	5 „	115 „	„	Upper Middle and Lower 4th Forms.
D	3 „	60 „	„	Upper and Lower 3rd Forms.
Lower School	4 „	92 „	„	Lower Shell, Upper and Lower 2nd and 1st Forms.

EXPLANATORY STATEMENT by the REV. J. F. BRIGHT respecting the RETURNS from the MODERN SCHOOL.

As the forms sent down by the Commissioners are drawn up entirely to suit the older schools, or such as proceed upon the old classical system, in many respects they are unfitted for a report from a modern school, and a few lines will probably be required to render the accompanying returns from our modern school intelligible.

In the first place, there is no mention made in the forms of Mathematics, which form one of the chief subjects of the Modern School. There will, therefore, be found on a separate paper a table of the work done by each mathematical division; the time devoted to the subject is entered in the general report of lessons (D). The remaining complications arise from three great difficulties, which are likely to be felt in all modern schools not exclusively military, and which have been certainly severely felt here.

The first of these is the small number of boys of which the Modern School consists; for while their numbers are so small that they can neither claim nor support more than three masters for general form work, their ages and their acquirements are as various, and extend over as large a space as those of the Upper Classical School with its 10 or 11 masters; consequently, there is as much difference between the top and the bottom of one form in the Modern School as between three forms in the Classical School. Some attempt to check this has been made by fixing a standard of admission to the Modern School; but the difference between boys in one form is still so great that they cannot be heard together, at all events in the fifth; consequently that form is divided in two removes, heard separately in almost every subject, an arrangement which, whatever its advantages, cannot but add enormously to the labour of the master, and, by diminishing the number of boys in a form to 13 or 14, destroy much of that competition which is one of the chief springs of action in all

large schools. This will account for double entries to be observed in Table D., and for the long lists of work in Table C. This does not apply to the mathematical part of the teaching.

As will be seen by the accompanying table, the school is divided into five divisions in that subject, each under the care of a different master, but under the supervision of the head mathematical master. These divisions are so small that a great amount of individual attention is possible. It should be stated, also, that at times when the numbers of the Modern School rise, the work of the fifth form is divided between two masters, the two removes becoming in everything, except history, separate forms. This has, however, only happened once, during the second half, namely, of the time to which the return applies.

The next difficulty to be mentioned is the great variety of objects which induce boys to enter the Modern in preference to the Classical school. Some are intended for Woolwich, some for the public offices, some for commercial life, some for any opening which may offer itself. The Modern School at Marlborough is by no means intended to be exclusively military; those, therefore, who are intended for Woolwich, and whose work, in some respects, must be different from that required in a general education, have to be again separated from the rest of the form, receiving assistance at different times, and doing far more work than the others; thus still further complications are introduced. This will explain such entries in Table D. as "Woolwich class statics," &c. It should, moreover, be mentioned that some boys of mathematical abilities prefer the modern school as a training for Cambridge, and that a separate arrangement has to be made for them, by which they can in some degree carry on their classics instead of the German of the Modern School.

The third difficulty, which will account for the enormous number of hours during which the upper fifth form are engaged, arises from the fact that all competitive examinations are arranged to suit the old system of education. This tendency becomes more and more pronounced, and its effect upon modern instruction proportionately more felt. In pursuance of this arrangement the marks given to the classical subjects outweigh vastly those given to any other subject than mathematics, so that a boy wishing to overbalance this preponderance with modern subjects is obliged to take in great numbers instead of one. The proportion of marks allotted is perfectly just while French and German are treated as they now are, but if the same standard were set for them as is set for classics, there is no reason why they should not be allowed to stand on equal terms with those languages. At present (taking the Woolwich examination as an example) it is necessary for a boy to take up three languages, French, German, and English, besides very high mathematics, at the age of 17. How far superficial such knowledge must be, it is not hard to judge. Under such circumstances, however, the number of hours employed cannot but be excessive, and much of the freedom of public school system must be sacrificed. It remains to add that the "form" feeling, in spite of these difficulties, is kept up as far as may be, and the working of the whole school passed under the observation of the master of the modern school by periodical "reviews," as in the upper school. The Head Master also examines the whole modern school in Latin or history at least once a half.

All that has been said up to this point has been purely explanatory, and has therefore been confined to the difficulties which beset the Modern School, and which render the complications observable in the tabular reports necessary. An undue prominence has thus been given to the unfavourable side of the undertaking, and a false impression as to its success might be created, were not a few words added with regard to its general progress and efficiency.

At its first foundation it was thronged, as might be expected, with boys who desired to avoid the stricter mental training of the classical school, with the idle, and in a great degree by both the rough and unpolished portion of the school, and for a time it acquired a distinct and by no means enviable character. Already, however, in the few years during which it has existed, this has been entirely obliterated. The forms are as well organized, the teaching is as regular, and the amount of work done probably as great as in the classical school. Consequently all marks of difference have disappeared, and the line of demarcation between the two departments is scarcely more pronounced than between any two forms in ordinary circumstances.

Meanwhile proofs of the usefulness of the institution are constantly given. Scarcely a half-year passes but several boys whose intellects were stifled in the uncongenial atmosphere of the classics, and who were consequently rapidly sinking into a state of hopeless or reckless duncedom pass from the Upper to the Modern School, and finding there room for their peculiar talents, regain their self esteem, again set cheerfully to work, and gain, with their improved character, a good and sensible education, if not so perfect a one as the classical system offers. Nay more, they not unfrequently attain high positions in the school; for the last two years the chief mathematical prize has been carried off by Modern School boys, neither of whom could possibly have succeeded in the Classical School, one of whom indeed had been tried and found utterly wanting in that department.

Of successes at Woolwich it is unnecessary to speak, except in so far as they give proof that some fair education is given, and afford reasonable presumption that the training which enables boys to succeed at competitive examinations cannot be without value to those who prefer other modes of entering into life.

Whatever success has been reached has been obtained in the face of the difficulties above enumerated, and is sufficient to give good ground to hope that, were those difficulties wholly or in part removed, were there the same appliances for modern as for classical teaching, the same well annotated books, the same carefully arranged grammars, the same accepted curriculum of classical authors, an education might be given in modern as accurate as in ancient subjects, while in comprehensiveness, in so far as it would be concerned with the wider field of modern thought, it might even have the advantage.

(Signed) J. F. BRIGHT.

MARLBOROUGH.] TABLE C.

TABULAR RETURNS (C) for certain selected

SIXTH FORM, UPPER AND LOWER DIVISIONS. 30 BOYS.

1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1862.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory and the Quantity of each in the same Year.
Every boy brings into school an edition with the text only of the authors enumerated in 3. They are encouraged to procure and use in preparation the best editions of each, such as *Arnold* and *Göller* on Thucydides; *Stallbaum* on Plato; *Vaughan* or *Alford* on the Romans; Stanley's Sinai and Palestine; *Wunder*, *Schneidewin*, *Hermann*, or *Linwood* on Sophocles; *Forbiger* and *Conington* on Virgil. In the lessons on Guizot, a list of books valuable for illustration (such as Gibbon, Milman, Michelet) is supplied them, which they are encouraged to consult. All are expected to have some abridgment of French history, as Michelet's Précis, Bonnechose's Geographie Physique et Historique de la France, or Student's History of France They all have access to an admirable library within the College buildings, besides one belonging to the 6th form.	Spruner's Atlas; Kiepert's Atlas; Smith's Bible Dictionary and Dictionaries of Antiquities, Biography, and Geography; Liddell and Scott's Lexicon; Bruder's Greek Concordance; White and Riddle, Andrew's and Smith's Latin Dictionaries; Jelf's Grammar; Donaldson's Grammar; Poitevin's French Dictionary; Diez's Romance Lexicon; Burguy's Glossaire Etymologique, &c. &c.	Demosthenes, four short Orations; Cicero de Oratore, Bk. I., 1-35; Oratio pro Milone; Homer Odyssey, XX.-XXIV.; Sophocles, Œdipus Coloneus; Thucydides, Bk. VI., 1-80; Virgil, Æn. IV.; Catullus, LXIII. and LXIV.; Juvenal's Satires, X.-XV.; Livy, Bk. V., 31-55; Plato de Republicâ, Bk. X.; Epistle to the Romans, ch. i.-viii.; Book of Joshua in LXX.; Guizot's Histoire de la Civilization en France, nearly two volumes. Besides which papers have been set to the whole form in the following subjects: 1. Private reading, done entirely by themselves. Odes of Horace; Virgil, Georg. I. and II. 2. Classical extra, read generally with their tutors. Plato de Rep., Bks. I. and II.; Plautus; Terence.	I can only answer this inadequately. Lessons are usually an hour each. A boy is called upon to construe. He stands up and reads from 6 to 12 lines in the original, then translates into English without repeating the Latin or Greek. All mistakes, as a rule, are at once noticed, accuracy being valued far more than fluency; they are passed to others in different parts of the form, and both the mistake itself and good or bad answers from others freely commented on. When the passage is finished, the construer sits down, and the difficult words or thoughts in the passage form subject for questions addressed generally, in the first instance, to the boy who has just construed, but passed from him to any others in the form. The exact meaning, derivation, and parsing of difficult words, illustrations of their various meanings from other authors, passages from English or ancient authors expressing the same or opposite thoughts, the laws of grammar which the passage exemplifies or appears to contradict, the points of difference between English and Latin or Greek, form the subject for these questions. But it is a part of his work which it is simply impossible for a teacher to describe. From 3 to 6 or 7 boys construe in each lesson according to the difficulty of the author and the proficiency of those who are called up. Every boy receives a mark for his performance in a register used for the purpose, and these marks, together with those for composition and other subjects, are added together at the end of the half-year, and count equally with the examination for the order of merit in which the list is arranged. It is necessary to state that up to 1858 the two divisions of the 6th form had been taught separately, being united only in divinity and history lessons. At present they form one form, being only divided in composition done in school, in translations into English, on paper, as above, and occasionally when a specially difficult author is read. Of the work enumerated under 3, only the Plato, part of the Virgil, and the Speeches of Thucydides were done separately, the composition master in each case taking the lower sixth.	Horace, Odes, 500 lines; Æn. IV., 400 lines as a minimum; Georgics I. and II., 400 lines; Sophocles, about 250 lines. The greater part of the Epistle to the Romans, ch. i.-viii., learnt by heart, so as to read the English into Greek memoriter. Besides this, other portions of the classical works mentioned above were learnt voluntarily, and marks given for them.	The substance and matter of all the books enumerated under 3 are expected to be prepared for the quarterly and half-yearly examinations. This list will therefore be the same as that under 3. Of course more stress is laid on retaining the matter in the historical and philosophical books, and perhaps most care is devoted to the mastery of the substance of the Divinity and the Guizot.

Divisions of Marlborough College.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test Proficiency in such "other Subjects."
	ORIGINAL.					
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None, as part of the regular work.	7 hexameter copies, about 40 lines each, some much longer.	None.	None.	Under this head would come the divinity, historical, French, and mathematical lessons; divinity two hours a week, French and history, ditto; mathematics, 4 or 6 ditto. 1. In divinity, the amount read of the New Testament and the LXX. in the past year is only Rom. i.–viii. and the book of Joshua. The extreme difficulty of the Epistle to the Romans makes it necessary to proceed with unusual slowness, but the result in awakening intelligent interest in the subject was with many most satisfactory. As a general rule, those who do badly in this subject do badly also in history, or in essays, or in any subject that requires reflection. 2. In the historical lessons which for some time past have been amalgamated with the French, a portion of Guizot, about 10 or 12 pages, is set; only parts of this are construed, as otherwise the amount done in two lessons a week would be absurdly small; but boy after boy is called upon to give the substance of sentence after sentence of Guizot, and certain parts are translated, a most valuable exercise. They are encouraged, not compelled, to analyse it for themselves before they come in. Questions are asked in the history of the time, and on any portion of history which may serve to illustrate what they read, and every means employed to interest them in the book. The subject of the connection between the French and other languages is worked as far as my own knowledge enables me to do. I may add that I believe it to be in many ways the most useful lesson which I have, and that I learn from it the capacities and intellectual promise of my pupils more than from almost any other subject which I teach. At the end of each half-year two papers are set, the one in the language, the other in the matter. As a general rule, the amount of knowledge of French which boys bring with them into the form is low. I can only aim at teaching enough to make French historical writers readily available. 3. *Mathematics*:— (1.) Four regular lessons weekly, the 6th form and upper 5th being divided into three sets, according to proficiency in mathematics. (2.) For two hours on Thursday afternoons the 6th form is divided into three divisions; each boy joins one, either for "extra classics" or "extra mathematics," or else joins some of the modern school in an "English language" class, so that a promising mathematician can get six hours a week out of the regular school hours.	Besides the marks given during the lessons in these subjects, there are at the end of each half-year examination papers; as a rule these are 4, one in the New Testament subject, one in the old do., one in the history and matter of the Guizot (or Thierry, Villemain, or other author), one in the French of do. The marks given for these papers carry considerable weight, both in adjudging exhibitions and scholarships, and also in determining the order of the form. The marks given for mathematics, both in the half-year and at the examinations, are added to the other marks, and considerably influence the result.
Prose.	5 essays; length of, from one to three letter sheets of paper.	3 Latin essays, minimum length 30 lines, some much longer.	None.	None.		
	TRANSLATION.					
Verse.	We set them occasionally, but none, I think, this year.	*Done out of School.* 20 elegiac copies, about 20 lines long, from various authors; 11 of hexameters, same length; 2 lyrics. *In School.* 3 elegiacs and 2 hexameters, about 10 or 12 lines long.	*Out of School.* 14 iambic exercises, from 16 to 20 lines long, mainly from Shakespeare. *In School.* 7 iambics, about 10 lines.	None.		
Prose.	Twice each week a passage is translated at length on paper from some Latin or Greek author. It is looked over and marked as a "copy."	*Out of School.* 12 copies, various authors, about 20 lines. *In School.* 9 copies, 14 or 15 lines, English.	*Out of School.* 13 exercises, various authors, about 20 lines. *In School.* 4 exercises, about 10 or 14 lines.	None. None.		

MARLBOROUGH.] TABLE C.—*continued.*

1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1862.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory and the Quantity of each in the same Year.
Every boy is obliged to have a copy of the text of the author he is reading without foot-notes from which he construes at lesson, *e.g.*: Plato, *vol. of Teubner's edition*; Sophocles, *Oxford edition*; Cicero, *vol. of Teubner's edition*; Livy, *vol. of Tauchnitz edition*; Virgil, *Oxford edition*; Horace, *Oxford edition*; Ovid, *vol. of Tauchnitz edition*; Greek Testament, *Oxford edition*. Besides these, he is advised to have some annotated edition of the particular work, as,—*Stallbaum's* Apology (Latin or English edition); *Schneidewin's* Œd. Rex (or Ajax), edited by *Kerchever Arnold*, (nearly all would have this); or *Wünder's* Œd. Rex (or Ajax); *Mayor's* 2nd Philippic; *Conington's* Virgil (very few would have this); *Macleane's* Horace, *school edition* (most would have this); *Paley's* Fasti; *Alford's* Greek Testament (few have this). A boy is also encouraged to consult other books bearing on what he is reading, in the school library, as Conybeare and Howson's Life of St. Paul, Grote's Greece, &c.; most of the best boys do so.	Every boy is expected to have—Smith's Classical Dictionary, Kiepert's Ancient Atlas. He is also encouraged to consult Smith's large Dictionaries, Biographical, Geographical, Biblical, &c. in the school library. Liddell and Scott's Greek Lexicon (nearly all have the large edition;) Andrew's or Smith's Latin Dictionary; Yonge's English-Latin Dictionary; Hamilton's English-Greek Dictionary (Chambers' series); Kennedy's Latin Grammar; Kennedy's Greek Grammar. Every boy has also Smith's Greece and Liddell's Rome, which he is advised to use as books of reference.	Greek:—Plato, Apology, Crito, Phœdo, chap. i.–xii., and lxiii.-lxiv.; Sophocles, Œdipus Rex, lines 1-862, Ajax, lines 1-865. Latin:—Cicero, Philippics, 2 and 9; Livy, Bk. V., c.i.-xxii. xxxiii–lv.; Virgil, Georgics, IV. and part of III.; Horace, Epodes and Ars Poetica; Ovid's Fasti (selections, about 500 or 600 lines). Greek Testament:—Acts, chapters xii. to end. French:—Voltaire, Siècle de Louis XIV., Voltaire, Charles XII.; Molière, Misanthrope; Michelet, Renaissance. (Different amounts of each book in different sets.)	A boy is "called up;" he reads a few lines (*e.g.*, in Horace, 2, or at most 3 stanzas), and then proceeds to construe them. Sometimes he is interrupted, sometimes he is allowed to finish his passage, and then criticised; the object in either case being to allow no false, inadequate, or clumsy rendering to pass. Other boys are appealed to to suggest improvements upon such a rendering, which are accepted or condemned, with more or less discussion of their merits, until a satisfactory translation is arrived at. Then such questions are asked as are naturally suggested by the passage, as,—"Why have we the subjunctive ———?" "Parse———." "Who was ———?" "Where is ———?" "What does this mean in your own words?" Such questions being generally (but, of course, not always) addressed primarily to the boy who has construed the passage, and then passed to others, according to no fixed method. Then another boy takes the next few lines, and so on. From 5 to 8 are called up in an hour. The selection of them is (or, at least, is made to appear) as arbitrary as possible. Places are not taken, but the boys are marked for construing and for questions answered. The aim in view is, that a boy should, through a careful consideration of the language, arrive first at a clear understanding of his author's meaning, and then be able to express it faithfully in idiomatic English, and in good taste. The master generally construes the lesson finally in longer portions, as, for instance, an ode of Horace at a time, so as to present it to the boys as a whole. Three other elements in the method of teaching the form should be noticed as very important (in their bearing, at least, on "construing lessons":)— (1.) Unseen Passage.—Every week (see D. and column 7 of C.) a passage of 15 or 20 lines, selected from some Greek or Latin book, which no boy in the form has read, is translated on paper, in school and under the eye of the master, with no aid except a dictionary for a Greek passage. It is afterwards looked over by him, and marked so as to tell seriously upon the total for the week. The papers are then returned (in school) to their authors, mistakes pointed out, and the passage fully explained to them in a sort of lecture upon it. This is most valuable as a test of a boy's real independent power over the language, and enables the master to tell, almost with certainty, if a boy resorts for his ordinary construing lessons to his neighbours, or Bohn's Classical Library. (It should be added that this plan is also adopted in the other two divisions of the fifth, the only difference being that a dictionary is allowed for Latin as well as Greek.) (2.) Grammar.—Constant reference to the method of analyzing the compound sentence given in Kennedy's Latin Grammar (Syntax, Part II.) is found most valuable, especially in Livy lessons. This part of the grammar is learnt by heart in all 3 divisions of the fifth, its thoughtful application insisted upon, and examples from it perpetually asked for in construing lessons. (3.) Correction of Composition.—When the master has looked over a set of copies, he returns them to their authors, as in the case of the "unseen passage," and gives a similar lecture on common mistakes (of which he has previously made notes) with other general observations on the passage and way of rendering it, and finally gives a revised copy, partially compiled, when possible, from the copies sent up to him. This saves the necessity of much time spent (though some is always so spent) in talking to each boy individually about his performance, and effects the end of improving the composition of the whole better than if much time were devoted to individual teaching.	Virgil, about 400 lines; Horace, about 550 lines; Ovid, about 200 lines; Sophocles, about 350 lines. Kennedy's Latin Grammar, Syntax, Part II.; Kennedy's Greek Grammar, Syntax, Parts II., III.	Besides those named under 3:—Smith's Greece, the Persian and Peloponnesian wars; Liddell's Rome, from the beginning to the end of the war with Pyrrhus; Old Testament History (in English Bible) from Solomon to Nehemiah.

FIFTH FORM, UPPER DIVISION, 25 BOYS.

TABLE C.—*continued.* [MARLBOROUGH.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
ORIGINAL.					None.	None.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	None.	None.	None.		
Prose.	None.	None.	None.	None.		
TRANSLATION.						
Verse.	None.	31 copies, about 460 lines from different English poets.	14 copies, about 160 lines, usually from Shakespeare (with considerable help given).	None.		
Prose.	30 copies, translations from different Greek and Latin authors, Sophocles, Plato, Livy, Horace, Virgil, Homer.	30 copies, from different English prose authors (each copy about 16 or 20 lines).	6 copies of sentences constructed for the purpose.	French exercises for the use of Marlborough College.		

MARLBOROUGH.] TABLE C.—*continued.*

1. Authors or Books used, (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1862.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
Herodotus, *Oxford edition*; Virgil, do.; Medea of Euripides, edited by *T. K. Arnold*; Greek Anthology (*Wilkins*); Sallust, *Oxford edition*; and also Sallust, edited by *G. Long*; Voltaire's Louis XIV. and Charles XII.	Liddell and Scott's Greek Lexicon (smaller edition); Smith's Latin-English Dictionary (smaller edition generally); Yonge's English-Latin Dictionary; Kennedy's Latin Grammar; Wordsworth's Greek Grammar; Harrow School Atlas (modern).	Greek:—Herodotus, Book VII., sec. 37–72; Book I., 28–58; Euripides, Medea, line 1–550 (omitting choruses): in the Anthology Homer's Odyssey, Book I., line 1–360. Latin:—Virgil, Æn. V. (all) and XII., 790–end; Sallust Jugurtha, chap. v.–xlviii. French:—Voltaire's Siècle de Louis XIV. (amount various); Voltaire's Charles XII. (amount various).	This is the highest of the place-taking forms in the school. Some 7 or 8 boys are generally put on to construe in the course of an hour's lesson. A boy stands up and reads about four lines aloud; any mistake he may make in pronouncing a word is immediately corrected by one of the three boys next below him, or by one still lower, in default, the boy who corrects going above the reader. The reader will then begin to construe, and suffers for any mistakes he may make as before. As the boy's translation is seldom little more than a bald and literal translation, he is generally asked to state the meaning of the passage in his own words, and then to try to adapt any of his own words or phrases as far as is allowable, while any one below offering a better rendering is allowed to profit by it. Many suggestions will thus be made by the boy himself or by others, some of which will be taken up, and the boys themselves made to think and state why such and such a particular translation is inapplicable. Parsing and syntax (with mythological and other questions arising out of the passage construed) will also be asked, but these, in a construing lesson, are more confined to anything *peculiar*, either in idiom, construction, or form of a word; this parsing and syntax of the reading book in use forming generally part of the regular Greek and Latin grammar lessons. The same process is repeated with as many as can be put on to construe in the hour. The master of the form generally construes the passage just done by a boy, or as often will wait and construe some 12 or more lines. The form is kept alive as much as possible by making the questions come round quickly, and individual boys being suddenly asked for an answer. As aids to construing, there are regular hours for grammar lessons, at which the parsing of the particular book in use is gone more fully into, with questions asked about the syntax. In Latin grammar lessons, the Latin construing book for the time being is brought in, and the substance of the syntax of the compound sentence explained verbally as much as possible, and as far as the master thinks his form capable of understanding it. The Latin composition is looked over by the master out of school, and the mistakes of the several boys noted down by him. On composition afternoons, the first half-hour or more is spent in talking over and explaining to the whole form, aloud, the last piece set for composition, reading out the different mistakes, and making the boys themselves correct each other's mistakes, with place-taking, and showing different ways of turning any passage in question, and how to express in Latin what they have turned awkwardly. This is also always a good opportunity for making the form apply the grammar they have learnt orally. This plan of correcting composition aloud has been found useful, as, not only does the whole form derive benefit by open correction of its several members' mistakes, but great time is saved for the master, which would otherwise have to be given to each boy separately, though this, as it is, is also done to a considerable extent.	Virgil, 450 lines; Shakespeare, Henry VIII., about 300 lines; Milton, Paradise Lost, Book I., about 250 lines. For holiday task, Milton's Paradise Lost, Book VI., first 260 lines.	Besides those named under head 3:— English History:—The Student's Hume, from the accession of Henry VII. to the year 1642. Old Testament history:—From the death of Solomon till the accession of Jehu; I. Kings, xii.; II. Kings, xi., with parallel chapters in the Chronicles. New Testament (in English Bible):—The Acts. As extras:— Prescott's Conquest of Peru, 2 Books; Life of Wellington, from the Railway Library; the Saxon Period in the Student's Hume.
Kennedy's Latin Grammar; Wordsworth's Greek Grammar; *K. Arnold's* Eclogæ Ovidianæ; *Kennedy's* Palæstra Latina; Markham's History of England; Cornewall's Geography; Wilkins' Greek Delectus.	Keith Johnston's small School Atlas; Smith's small Latin Dictionary; Smith's small Classical Dictionary.	Ovid, 250 lines or thereabouts; Palæstra, 10 or 12 pages; Greek Delectus, about 20 pages.	A Latin lesson consists of 8–10 lines of Ovid, or 12–16 lines of Palæstra; frequently, besides the construing, several words are marked, and each boy is required to bring a written explanation of their construction, according to the rules of syntax which have been learned in the grammar lessons. One boy after another is called on to construe a short piece of the lesson, till the whole has been done once. The construing is made as literal as possible at this stage; mistakes as they occur are corrected by questions passed round the form, sometimes in regular order, sometimes in no order at all, if attention flags. Actual grammatical mistakes, *e.g.*, construing a tense by its wrong English equivalent, are discouraged by the loss of a fixed number of places for the boy who originally made the mistake, and all who fail to correct it. If the lesson contains a narrative, or a portion of a narrative, a boy is called on to tell the story in his own language. The lesson is then construed through once again by other boys, who are each called on to construe about double the quantity which was construed by those who construed previously. At this stage the boys are required to produce, first the literal translation, and then the English idiom which may be necessary; this was elicited from the boys by questioning, as described above, if possible; if not, they were told it by the master. After the lesson has been twice construed, a great many questions on parsing are asked, and the explanation is required of all except the very commonest constructions which exemplify the rules of Latin syntax which are learned in the form. This is the part of the lesson which, more than any other, tests the common sense of the boys, and their power of applying rules which have been carefully explained to them in former lessons. After this the master construes the lesson, continually stopping and calling on boys who have been inattentive during the lesson to take up the construing at some important word. If the lesson has been easy, so as to be finished soon, the books are closed, and English words or idioms which have occurred during the lesson are passed about the form, the boys being required to give the Latin for them. In Greek lessons the same routine is followed, except that no questions in Greek syntax are asked, as the boys have not yet learned any. But where striking similarities to, or divergences from, the Latin syntax occur, they are made the subject of questions. In both Greek and Latin lessons, pains are taken to get the boys to observe and quote examples from the books which they are reading, as well as those which they have learned from the Latin grammar.	Ovid, about 100 lines; Poems of Sir W. Scott, or Selection of English Poetry used in the Liverpool Collegiate School, 300 lines, about; Latin and Greek grammar form the greatest part of the repetition lessons.	None.

UPPER SHELL FORM. 30 BOYS.

LOWER SHELL FORM. 30 BOYS.

TABLE C.—*continued.* [MARLBOROUGH.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."

Verse.	None.	Literal translations from Ovid or Tibullus. The quantity is very variable; about 25 lines a week would be a rough average.	None.	None.		
Prose.	None.	Quantity so variable that no average can be struck. Sentences are made, or translated from an easy Latin author, by the master, framed to introduce as much as possible words and phrases which have occurred in lessons. Sometimes Bradley's Latin exercises are used.	None.	French exercises published for the use of Marlborough College, are done by the highest French division of the form.		

MARLBOROUGH.] TABLE D.

Tabular Returns (D.) for the several Divisions of Marlborough College.

Sixth Form, Upper and Lower Divisions, 30 Boys.
The Head Master. Assisted by C. W. Moule, Esq., M.A.

No. 1.—Lessons and Compositions during Half-year ending December 17, 1861.

	Lessons.	Compositions.
Sunday	4½ to 5½. Epistle to the Romans, or Book of Joshua in LXX.	Three compositions set on Monday. 1. The master's copy, oftenest Latin prose, or Latin hexameters (translation or original), or English or Latin essay. 2. Greek prose and Greek verse alternately. 3. Translation into Latin verse, varied occasionally with other kinds of composition. Of these :— 1 is given up on Friday. 2 on Wednesday. 3 on Saturday.
Monday	7.20. to 8.20. Same as Sunday. 11 to 12. Juvenal; 2nd quarter, Aristophanes, Nubes. 12 to 12.20 or 12½. A short lecture on composition done in school on Saturday. 3 to 4, or in winter 5¾ to 6¾. Mathematics.	
Tuesday	7.20 to 8.20. Odyssey; 2nd quarter Livy V. 11 to 12. Juvenal, Aristophanes. 12 to 12½ or 1. Translation on paper of Greek or Latin at sight. 3 to 4, or 5½ to 6¾. Guizot's Civilization en France.	
Wednesday	7.20 to 8.20. Guizot. 10 to 11. Odyssey, Livy. 11 to 12. Mathematics. Half Holiday for upper and modern schools.	
Thursday	7.20 to 8.20. Virgil Æneid, IV., Plato de Rep. Bk. X. 11 to 12. Juvenal, Aristophanes. 12 to 12.20. Short lecture on passage done on Tuesday. 3 to 5 or 4¾ to 6¾. Extra classics or extra mathematics, (explained in Table C.)	
Friday	7.20 to 8.20. Virgil's Æneid IV., Plato de Rep., X. 11 to 12. Juvenal, Aristophanes. 12 to 12½ or 12¾. Unseen translation as on Tuesday. 3 to 4. Mathematics; in winter, 6¾ to 7¾.	
Saturday	7.20 to 8.20. Virgil's Æneid, IV., Plato de Rep., X. 10 to 11. Mathematics. 11 to 12½. Greek or Latin composition done in school at sight. 3½ to 4½ or 5, or 5½ to 6¾. Some one or other of the above classical lessons.	

Summary of Lessons.

Greek and Latin including composition done in school (11)	13 hours.
Mathematics	4 or 6
Divinity	2
History and French	2
Classics or Mathematics, according to choice	2
Total	23 hours.

No. 2.—Lessons and Compositions during Half-year ending June 25, 1862.

	Lessons.	Compositions.
Sunday	3½ to 4½. Epistle to the Romans.	Same as in No. 1.
Monday	7.20 to 8.20. Epistle to the Romans. 11 to 12. Demosthenes; 2nd quarter, Cicero de Oratore. 12 to 12½. Short lecture on Saturday's composition. 3 to 4, or 5½ to 6¾. Mathematics.	—
Tuesday	7.20 to 8.20. Demosthenes, Cicero de Oratore. 11 to 12. Demosthenes, Cicero de Oratore. 12 to 12½ or 12¾. Translation from Greek or Latin on paper. 3 to 4 or 5¾ to 6¾. Guizot's Civilization en France.	—
Wednesday	7.20 to 8.20. Guizot, occasionally substituting a classical lesson. 10 to 11. Demosthenes, Cicero de Oratore. 11 to 12. Mathematics. Half Holiday for upper and modern schools.	—
Thursday	7.20 to 8.20. Demosthenes, Cicero de Oratore. 11 to 12. Demosthenes, Cicero de Oratore. 12 to 12.20. Short lecture on translation of Tuesday. 3 to 5, or 4¾ to 6¾. Extra classics, or extra mathematics.	—
Friday	7.20 to 8.20. Demosthenes, Cicero de Oratore. 11 to 12. Demosthenes, Cicero de Oratore. 12 to 12½. Translation from Greek or Latin on paper. 3 to 4, or 5¾ to 6¾. Mathematics.	—
Saturday	7.20 to 8.20. Demosthenes, Cicero de Oratore. 10 to 11. Mathematics. 11 to 12¾. Composition done in school at sight. 3½ to 4¾ or 5½ to 6¾. Some classical lesson, if not a given half holiday.	—

LOWER SHELL FORM, 30 BOYS. C. M. BULL, ESQ., M.A.

Lessons and Compositions during the Year, June 1861 to June 1862.

	Lessons.	Compositions.
Sunday	4 to 5½ New Testament. 7½ to 8. Catechism, or hymn repeated by heart.	*Verse.* Ten lines of English, translated from some Latin elegiac poet; most of the Latin words are given in the first person present indicative active voice, if verbs; in the nominative singular if substantives. *Prose.* The master composes or translates sentences of English, framed to introduce words and constructions which have recently occurred in the lessons.
Monday	7.20 to 8.20. Old Testament. 10 to 11. Arithmetic. 11 to 12. Latin construing. 3 to 5½. (in winter 4.30 to 6.45.) Latin or Greek grammar, or Latin or English repetition, or English history or geography, followed by Latin verses or prose.	
Tuesday	7.20 to 8.20. French. 10 to 11. Greek construing. 11 to 12. Parse out words on paper, according to an established form, without dictionary. 3 to 4 (in winter 5.45 to 6.45). Latin verses, or Latin prose. 4 to 4.45. As Monday, but if the lesson is history or geography no composition is done. Writing lesson for boys who write badly.	
Wednesday	7.20 to 8.20. Latin construing. 10 to 11. Arithmetic. 11 to 12. Greek construing. 3 to 5. (4.45 to 6.45 in winter.) As Monday.	
Thursday	7.20 to 8.20. Latin construing. 10 to 11. Arithmetic. 11 to 12. Greek construing. 3 to 4. (or 5.45 to 6.45). As Tuesday.	
Friday	7.20 to 8.20. French. 10 to 11. Greek construing. 11 to 12. Arithmetic. 3 to 5½. or 4.30 to 6.45. As Monday.	
Saturday	7.20 to 8.20. Latin construing, go over the lessons of the week, no new lesson learned. 10 to 11. Greek construing, go over the lessons of the week, no new lesson learned. 11 to 12. Greek parsing written out on paper, or a Latin exercise. No afternoon lesson.	

SUMMARY OF LESSONS.

3 lessons in Scripture, or kindred subjects.
4 „ Latin construing.
4 „ Greek construing.
At least 6 hours in composition, if no extra half holiday is given.
4 hours in arithmetic.
2 hours in French.
23 Total.

The whole number of hours spent in school during the week, if no extra half holiday is given, amounts to 29.

No accurate estimate can be formed of the hours spent in hearing grammar and repetition; each boy is questioned separately, and all the boys who are not being questioned at any given time are doing verses or exercises. Lessons in history and geography are not begun till certain portions of Latin and Greek grammar have been well learned.

SECOND FORM, UPPER DIVISION, 31 BOYS. REV. T. A. PRESTON, M.A.

Lessons and Compositions during Half-year ending June 1862.

	Lessons.	Compositions.
Sunday	4 to 5¼. Bible repetition and questions on one or two chapters. 7½ to 8. Catechism.	In addition to the fixed hours for composition on,— Monday, 1½ hours. Tuesday, 1 hour. Wednesday, 1 hour, Friday, 1½ hours. A great deal was done *vivâ voce* at construing lessons. Extra work at parsing was frequently resorted to, and occasionally a construing lesson was omitted and a grammar lesson substituted.
Monday	7½ to 8½. New Testament. 10 to 11. Arithmetic. 11 to 12. Construing, Kennedy's Palæstra. 3 to 4. Greek grammar, 4 to 5¼. Latin verses.	
Tuesday	7½ to 8½. French. 10 to 11. Greek construing (Wilkins' Delectus). 11 to 12. Latin prose. 3 to 4. Geography. 4 to 5. Writing for those who write badly (half the set).	
Wednesday	7½ to 8½. Old Testament. 10 to 11. Arithmetic. 11 to 12. Latin construing. 3 to 4. Greek grammar. 4 to 5. Latin prose (when not a half holiday).	
Thursday	7½ to 8½. Latin grammar. 10 to 11. Arithmetic. 11 to 12. Greek construing. 3 to 4. English history. 4 to 5. Writing (for the other half of the set).	—
Friday	7½ to 8½. French. 10 to 11. Latin construing. 11 to 12. Arithmetic. 3 to 4. Greek grammar. 4 to 5½. Latin verse.	—
Saturday	7½ to 8½. Repetition and Latin parsing. 10 to 11. Greek construing. 11 to 12. Latin grammar. Half Holiday.	

SUMMARY OF LESSONS.

Divinity	3¾ hours.

MARLBOROUGH (Modern School)]. TABLE C. - - - - - - - -

RETURNS (C.) for the Modern School,

Modern Fifth Form. 27 Boys. Rev. J. F. Bright, M.A.
Number of Boys from the Form or Division of Form who have left the School during the same Year, 10.

1. Authors or Books used (not being mere Books of Reference,) with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1862.	4. Method of hearing the Form in each construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory and the Quantity of each in the same Year.
French Grammar, German Grammar, compiled for the use of the College; Hughes' Manual of Geography; Keightley's History of England; A. Roche's Histoire d'Angleterre.	Smith's Dictionary of the Bible; Knight's Biographical Encyclopædia; Poitevin's Dictionnaire Universelle; Fleming's and Tibbin's English-French Dictionary; Hilpert's large German Dictionary; Flügel's smaller Dictionary, Hilpert's smaller Dictionary, for common use in German; Spiers' French Dictionary, Contanseau's French Dictionary, for common use in French; Keith Johnstone's School Atlases of Political and Physical Geography.	*Upper Remove.* Göethe's "Faust" (plain text) to the end of the scene in Martha's garden, omitting occasional passages; Göethe's "Aus Meinem Leben" (plain text) Books V. and VI. (not finished); Oltrogge's "Deutsches Lesebuch," Part III., Extracts from—J. P. Richter; Göethe's Italien Reise; Göethe's and Schiller's letters; Lessing's Laocoon; Max Müller's German Classics, extracts from Herder, Richter; Boileau's Satires, Epitres, and Art Poetique; Molière's Misanthrope, Les Femmes Savantes, Tartuffe, 2 acts; La France Littéraire (Herrig and Burguy), the extracts from Lamartine, Dumas, X. de Maistre, Nodier, J. Janin. *Lower Remove.* Göethe's Hermann and Dorothea, Books III., IV., V.; Oltrogge's Deutsches Lesebuch, Part III., Extracts, from Schiller and Körner's Letter; Molière, L'Avare, IV. V. Acts, Misanthrope, I. II. Acts; St. Beuve's Causeries du Lundi, Articles on Jeanne d'Arc, Göethe and Bettina; Livy, Book XXII. *Both Removes.* Schiller's Wallenstein's Lager, Acts I. and II.	The method varies necessarily with the lesson and with the part of the form heard. With the upper boys there is no "place-taking." Five or six are called up to translate; no mistake is allowed to pass without instant notice. Extra marks are given for answers showing intelligence. Accurate parsing is required even with the head boys, and much stress is laid on the style of translation. Lest this should suffer from the frequent interruptions necessary to secure accuracy, a passage which has been much broken is often retranslated by the next boy set on. With the lower remove the ordinary place-taking system is adopted. Mistakes are instantly passed on, and questions in grammar, construction, and the substance of the lesson passed about as quickly as possible in all directions to secure attention.	Göethe's Hermann and Dorothea (Lower remove) 400 lines; Boileau, about 700 lines (Upper remove); Chaucer's Canterbury Tales, 400 lines.	Old Testament, Genesis and Exodus to end of plagues; Ezra, Nehemiah, part of Kings II. and a portion of Maccabees; New Testament, St. Luke's Gospel in English. Upper remove, Epistle to the Hebrews, in German, 10 chapters. Lower remove, Acts, 14 chapters, the speeches in German. The substance of all books read is required to be known most strictly.

TABLE C. [MARLBOROUGH (Modern School).

Marlborough College.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
	ORIGINAL.				English History. This is taught in mixed lessons and lectures, for, as some of the boys are fairly advanced, much time is employed in illustration, explanation, and in giving general historical views, as well as in catechetical teaching. The course of English history occupies about 2 years. English Language. This is taught by lecture. 2 hours a week are given to each of these subjects. As English text books, Chaucer's Prologue and Bacon's Essays were used.	In History questions are repeatedly asked in the old work, and knowledge of past lectures required. In English language occasional examination papers are set.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	None.	None.	None.		
Prose.	An occasional English essay; 2 or 3 a half.	None.	None.	None.		
	TRANSLATION.					
Verse.	None.	None.	None.	2 French, 2 German translations, 1 German exercise a week.		
Prose.	Generally one piece of translation from French or German in the week.	Lower remove, one short piece of prose a week. It is usually a retranslation of a piece of Livy or Cæsar illustrating the translation of the week.	The French and German translations are drawn from any convenient source, English classics, plays, comic novels, retranslations. They are carefully underlined, many of them corrected with each boy separately, returned to the boys, a fair copy given and lectured upon in form. The German exercise consists of sentences composed for the purpose of introducing idioms and unusual grammatical uses.			

MARLBOROUGH, Modern School.] TABLE C.—*continued.*

1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays. 1862.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
MODERN FOURTH FORM, UPPER DIVISION. 29 TO 21 BOYS. REV. T. W. LEE, M.A. Number of Boys from the Form or Division of Form who have left the School during the same Year, 8.					
The Bible; Cornwell's Geography, 30th edition; Curtis' History of England, 3rd edition; Kennedy's Latin Grammar, 4th edition; German Grammar (for the use of Marlborough College); French Grammar (for the use of Marlborough College); French Exercises (for the use of Marlborough College); Bradley's Latin Exercises, 6th edition; Arnold's First German Book, 5th edition; Class Book of English Poetry, by Daniel Scrymgeour.	Smith's smaller Latin - English Dictionary, 12th thousand; Yonge's English Latin Dictionary, new edition; Flügel's Abridged German Dictionary, new edition; Contanseau's small French Dictionary, 3rd edition; the Harrow School Atlas (Modern); Butler's Atlas (Ancient), new edition.	Deutsches Lesebuch (Oltrogge), Part I., 10th edition. Read during the year pp. 170, 171, Vom Hunde; pp. 199–204 Die Peakshöhle; pp. 77–79 Der Mäusthurm; p. 340 Die Drei Fische; pp. 166, 167, Der Wolf; pp. 188–191 Der Niagarafall; pp. 289–291, sections 17, 18, 19, 342, 343, Die Kinder im Walde. La France Littéraire (Morceaux choisis de littératureFrançaise, ancienne et moderne), 5th edition stéréotype. Read during the year p. 401 Mort de Coligny (Henriade, 72 lines); pp. 641–647 Fénelon (Villemain); pp. 676–678 L'enlèvement de la redoute (Mérimée); pp. 680–683, Une Visite à Nimes (Dumas). De Senectute, ch. xvi. to xxiii. (inclusive), Oxford edition. The Seven Kings of Rome (Josiah Wright, M.A., from Livy, &c.), 2nd edition, Chapters i. to xxi.	The form sit in the order of some previous lesson. A number of boys, chosen almost at random (see below) stand up in turn, and each reads a few lines, which he then translates. The mistakes in reading or in translation, which any boy makes, are passed down the form, and those who correct them take the place of the boy who is corrected. A mark, put against the name of each boy who is called upon to translate, prevents the mistake of overlooking any individual for a length of time. When the whole is translated, questions on the constructions and grammar generally of the lesson are put, while the books are open or closed, as the case may be. The translation is then gone over again by the master of the form. At the end of the lesson each boy gives in the number of his place in form. The head boy begins to count from some number generally high enough to include all the members of the form. It should be added that an acquaintance with the subject matter of the lesson is always expected.	Oltrogge, Die drei Fische, 136 lines. La France Littéraire, p. 401, 72 lines, pp. 496, 497, 83 lines. Class Book of Poetry, p. 122, from Othello, 61 lines; p. 140, Ben Jonson, Song of Hesperus, 18 lines; p. 144, Ben Jonson, Elegy on Shakspere, 21 lines; p. 131, Henry VIII., Wolsey to Cromwell, 20 lines; pp. 111–113, from Julius Cæsar 105 lines. The Church Catechism.	The Church Catechism. Cornwell's Geography, pp. 248 to 283, pp. 298 to 300, the Northern Counties of England. Curtis's History of England, 3rd edition, the Houses of Lancaster and York, Tudor, and Stuart. Acts, ch. i. to xiv. (inclusive); St. Mark's Gospel; Genesis, ch. i. to xxxv. (inclusive). All the work mentioned above in column 3 of this Report.
MODERN FOURTH FORM, LOWER DIVISION. 28 BOYS. H. G. ALINGTON, B.A. Number of Boys who have left the Form during the same Half-year, 0.					
Cornelius Nepos, *a new edition, by Rev. John T. White*; Kennedy's Latin Grammar, latest edition; Bradley's Latin Exercise, latest edition; "Au Coin du Feu," by Emile Souvestre, latest edition; the Marlborough French Grammar, new edition; the Marlborough French Exercise Book, 1st edition; German Grammar for the use of Marlborough College, 1st edition; History of England, by Curtis, latest edition; Cornwell's Geography, 31st edition.	The Harrow Atlas, or Keith Johnstone's Modern Atlas; Contanseau's French Dictionary, 5th edition; Smith's Latin - English Dictionary, twelfth thousand; Yonge's English - Latin Dictionary, new edition.	Cornelius Nepos; the lives of Alcibiades, Thrasybulus, Cinon, Dion, Iphicrates, Chabrias. "Au Coin du Feu."	The form is heard on the system usually followed in place-taking forms. The boys, sitting in the order of some previous lesson, translate *vivâ voce*. As many as possible have actually to translate a few sentences; all are examined in the necessary grammar and questions suggested by the subject. At the close of the lesson the boys are marked according to the order in which they then sit.	The Class Book of English Poetry.	History of England, Curtis, from Henry II. to Edward II. inclusive. The Acts of the Apostles from ch. xiii. – xxiii. inclusive; I Kings, chapters i.–xvi. inclusive. Cornwell's Geography, Scotland.

	7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.				8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
	ORIGINAL.				Under this head mathematics might be placed, but, as the Forms are broken up into sets in mathematics, a special report on this subject is given elsewhere.	None.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	None.	None.	None.		
Prose.	None.	None.	None.	None.		
	TRANSLATION.					
Verse.	None.	None.	None.	None.		
Prose.	Rendering of tales, &c. in the pupil's own words. This was done not once a fortnight.	Exercises by Wright on the Seven Kings of Rome, and Bradley's Latin Exercises, written or *vivâ voce* in Form.	None.	French exercises (for the use of Marlborough College) written and *vivâ voce*. Also miscellaneous exercises. German, Arnold (column 1), and miscellaneous exercises, written and *vivâ voce*. Dictation, French and German.		
	ORIGINAL.				None.	None.
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	None.	None.	None.		
Prose.	Once a week a short piece of English writing on some easy subject, or the reproduction of a scene in history or light literature, read aloud to the form; done in an hour in school.	None.	None.	None.		
	TRANSLATION.					
Verse.	None.	None.	None.	None.		
Prose.	None.	Exercises from Bradley's Exercise Book, or translations of sentences on grammar, on paper or *vivâ voce*, 3 or 4 hours per week.	None.	3 or 4 hours per week Marlborough Exercise Book, and sentences illustrative of grammar. Occasionally a few sentences on the early part of German accidence, on paper or *vivâ voce*.		

Returns (D.) for the Modern School, Marlborough College.

Modern Fifth Form, 27 Boys. Rev. J. F. Bright, M.A.

Lessons and Compositions during the Half-year ending at Midsummer 1862.

	Lessons.	Compositions.
Sunday	4½ to 5½. Epistle to the Hebrews in German.	—
	7½ to 8. Explanation of a psalm, or some passage by heart.	
Monday	7.20 to 8.20. Genesis and Exodus, in English.	
	10 to 11. German composition; (Cambridge Class,) Homer.	1 hour German.
	11 to 12. Lower remove, Livy, Bk. XXII.; upper remove, drawing.	
	3 to 4. English history.	
	7½ to 8½. Indian history or language.	
Tuesday	7.20 to 8.20. Mathematics.	
	10 to 11. Upper remove, German translation, (Goethe's It. Reise, J. P. Richter); lower remove, German translation; Cambridge class, Virgil.	
	11 to 12. French composition.	1 hour French.
	12½ to 1½. Hindustani.	
	3 to 4, 4 to 5½. Mathematics.	
	7½ to 8½. Upper remove, statics.	
Wednesday	7.20 to 8.20. Mathematics.	
	10 to 11. Upper remove, Mathematics; lower remove, Livy, or composition.	1 hour Latin.
	11 to 12. French translation, in removes.	
	12 to 1. Correction of French composition. Half Holiday.	
	5 to 6. Drawing for upper remove.	
	7½ to 8½. German composition.	1 hour German.
Thursday	7.20 to 8.20. Mathematics.	
	10 to 11. Livy, lower remove; mathematics, upper remove.	
	11 to 12. French composition.	1 hour French.
	12 to 1. German composition corrected.	
	3 to 4, 4 to 5½. English language.	
	7½ to 8½. Upper remove, statics.	
Friday	7.20 to 8.20. Mathematics.	
	10 to 11. Mathematics.	
	11 to 12. German translation (Cambridge class, Virgil.)	
	12 to 1. Lower remove correct French composition.	
	3 to 4. History.	An English essay 2 or 3 times in the half year.
	7½ to 8½. Correct composition in form.	
Saturday	7.20 to 8.20. Mathematics.	
	10 to 11. French construing.	
	11 to 12. German grammar and correction of exercise (Cambridge Mathematics.)	
	12 to 1. Correct composition in form. (Often Half Holiday.)	All compositions finished out of school.
	3 to 4. Geography.	
	4 to 5. Unseen passage into English.	
	7½ to 8½. Upper remove, Mathematics.	

General Summary of Lessons.

French, 4 hours and 2 composition lectures.
German, 4 hours and 2 composition lectures.
Mathematics, 8 for all, 10 for upper remove.
Drawing, 2 for upper remove.
Mathematics, 6 to 9 hours for upper remove, extra.
History, 2 hours.
English, 2 hours.
Geography, 1 hour.
Unseen translation, 1 hour,

MATHEMATICAL ARRANGEMENTS of the MODERN SCHOOL, MARLBOROUGH COLLEGE.

The school is divided, without regard to forms, into five divisions.

The 5th or lowest division is answerable for—*

Arithmetic.—First four rules (abstract and concrete); Greatest Common Measure and Least Common Measure; vulgar fractions (abstract and concrete), and easy decimals.

Algebra.—Brackets, four first rules, easy Greatest Common Measure, simple equations.

Euclid.—Bk. I. to 26th prop., and easy problems.

The 4th division for—

Arithmetic.—As before, and decimals, proportion (first principle and rule), simple interest.

Algebra.—As before, and Greatest Common Measure, and Least Common Measure., square root, simple equations (simultaneous and literal), easy fractions.

Euclid.—Books I. and II. (including algebraical proofs), problems.

The 3rd division for—

Arithmetic.—As before, and practice, square area, proportional parts, compound interest.

Algebra.—As before, and factors, indices, progressions quadratic equations.

Euclid.—Books I., II., III., and problems.

The 2nd division for—

Arithmetic.—As before, and discount, stocks, cube root.

Algebra.—As before, and literal equations, fractions, surds, indeterminate coefficients.

Euclid.—Books I., II., III., (IV.), VI.

Trigonometry.

The 1st division keep up all former subjects, and push on as far as circumstances allow. In 1862 the subjects were—

Arithmetic.—All.

Algebra.—All.

Plane trigonometry.—All.

Analytical geometry.—To the end of parabola, with selections from the ellipse and hyperbola.

Euclid.—I., II., III., IV., VI., XI., to prop. 21.

Notes on the theory of equations, mensuration, geometrical conics, parabola.

Woolwich candidates read in addition, in a class for that purpose, and with a private tutor,

Elementary mechanics.—(H. Goodwin's.)

Hydrostatics.—Differential and integral calculus.

* This work may, of course, be carried higher if circumstances allow.

ELLINOTON.

TATEMENT.

WELLINGTON COLLEGE.

LETTER from the Rev. E. W. BENSON, Principal.

Wellington College, Jan. 10, 1863.

MY LORDS AND GENTLEMEN,

I HAVE the honour to submit to you, in accordance with a request conveyed to me by your Secretary, returns for the year 1862 for Wellington College, entered in Tables C. and D., issued by Her Majesty's Commissioners.*

To these is appended a conspectus of the work done in mathematics in the same year.

And I have accompanied these returns, as requested, with a letter, "explaining the distinctive features of the "system, and the results of my experience of its operation."

I have, &c.

Her Majesty's Commissioners for Public Schools. E. W. BENSON.

1. What has been attempted hitherto at Wellington College is simply the introduction in larger measure of some modern elements into the essential and regular work of the school.

2. The modifications which experience has produced in the amount and variety of such subjects taught are described below. The mode of teaching, the text books, the plan of examinations, and various general arrangements are in most respects the same as those of Rugby.

3. The arrangement of the modern school differs somewhat from that of any with which I am acquainted, and is detailed below.

4. The daily life of the boys, and the general system of government and discipline are mainly conformed to the model of older schools. The partial self-government of the boys, and the responsibility of the elders, are carefully preserved.

5. Owing to the residence of all under one roof the masters are more constantly accessible to the boys, and see more of them than is common in the older foundations.

Numbers, Terms, &c.

6. There are in college 216 boys who thus live together; the number being limited by the number of studies. There will be 246 when the new chapel is completed; six others reside in a master's house.

Of these boys 71 are on the foundation, being orphans of officers elected by the Governors, on the grounds of the services of the father and present circumstances of the family. These boys pay 10*l*., 15*l*., or 20*l*. a year as the Governors may appoint.

Other boys pay 110*l*. a year, or if sons of officers 80*l*.

All boys dress alike, *i.e.*, in ordinary boy's attire made after one pattern, and varying from time to time to avoid singularity. The object of this rule is to avoid any distinctions between foundationers and non-foundationers.

Dormitories and Tutorial System.

7. The system of dormitories, as now used, has the effect of breaking up the mass of boys into smaller units. Each "dormitory" of 30 has its own tutor and its own prefects; its table in hall and place in chapel; and is considered as a distinct body in the games. A boy remains during his whole school-life in the dormitory in which he first enters. The "tutor of a dormitory" answers to the master of a house elsewhere. He receives reports of a boy's progress from his form master, interests himself in all matters touching his progress and well-being, and corresponds with his friends. This method of sub-division, producing at once an *esprit de corps*, acted well and strongly from the first, on the tone and character of the boys, and as the relations have been drawn closer between tutors and boys the personal influence of the masters has been more and more beneficially felt.

Construction of Dormitories and Studies.

8. The dormitories, eight in number, are 118 feet long by 28 feet 10 inches wide; they are divided by wooden partitions 8 feet 6 inches high, into 30 or 32 small rooms, "studies," 10 feet 6 inches long by 7 feet broad, ranged on either side of a passage 7 feet 8 inches wide. Above all is open to the full height of the dormitory, 13 feet. An excellent system of warming and ventilation keeps the rooms at an even temperature, and perfectly fresh night and day. Each study can be locked up by its owner, the tutor having a pass key; each study has its own window and gaslight, and contains bed, bookcase, chair, and washingstand, with such furniture as, under certain restrictions, a boy's friends add.

All boys are downstairs at 7 a.m., and after a quarter-past 9 in the morning all above a certain place in the school are allowed to work in their studies; other boys after mid-day.

9. This system will always necessitate the residence within college walls of a certain number of unmarried tutors, who will be younger than the masters in most public schools. The rooms of the tutors are sufficiently apart to obviate both the possibility and the suspicion of undue surveillance; but both their age and accessibility have created a mutual confidence and sense of sympathy and reliance on the part of the boys, which is a real gain. The disadvantage would be in the loss of the services of valued masters, who would after a time seek positions affording opportunity for marrying; but to meet this difficulty the Governors have already built one house for a master in which he can receive six boys, and the plan will be pursued further as occasion may arise.

Division of School into Forms.

10. For purposes of instruction the boys are divided in the following way:—

Upper School—	Sixth Form and Remove	-	27 boys.
„	Fifth Form	-	19 „
Middle School—	Upper Middle, First Division		22 „
„	„ Second „		33 „
„	Lower Middle First „		33 „
„	„ Second „		27 „
Lower School—	Fourth Form	-	32 „
„	Third Form	-	22 „
„	Second and First Forms	-	11 „
			226*

"Mathematical Forms" or Modern Divisions. Mathematical, French, and German Sets.

In each form, from the sixth to the second division of the upper middle included, there are a certain number of boys who do less classics and more modern work; these are called the "Mathematical Divisions of Forms" or "Mathematical Forms."

The upper school is for mathematical teaching redivided into three mathematical "sets"; for German into three German sets; for French into three French sets, according to the proficiency of each boy in the several subjects.

Similarly the four forms of middle school are divided into six mathematical or arithmetical sets, into six French sets; and (excluding second division of lower middle) into five German sets.

The lower school into four arithmetical sets; the fourth form into two French sets. In the three lowest forms those boys who have already made a fair beginning in French are taught French by themselves.

French, German, and (according to proficiency) mathematics or arithmetic are thus integral parts of the school work; four hours a week being assigned to mathematics, two to French, and two to German. The middle and lower schools are taught drawing and vocal music; in the upper school one of these subjects may be discontinued, but many continue both. Chemistry is taught to all the mathematical forms and to volunteers from the classical forms.

The Masters.

11. Each form and division of a form has its own master. There are thus, one head master and 17 assistant masters, —viz.:

9 Form masters, members of the Universities.
2 Mathematical masters, members of the Universities.
1 German master.
1 French master.
1 Teacher of chemistry.
1 Drawing master.
1 Writing and singing master.
1 Singing master of upper school (who is also the teacher of instrumental music as an extra).

Every form master is engaged in teaching at least some one modern subject (language, mathematics, or history) to some "set," which may be made out of his own form, or may be in some other part of the school.

* The Returns printed are—under Table C. those for the sixth form and remove; the fifth; the upper middle, 1st division; and the fourth form; and those under Table D. for the whole school.

* The excess of 4 boys over 222 mentioned above is occasioned by absences temporarily filled up.

Foreign Masters.

One foreign master in each language is employed, and the system adopted with them is to put under them the *best* modern scholars and the *beginners* in each school, and to place under English masters those boys who, from their state of progress, require to be steadily worked in exercises and construing after a classical manner, rather than to be practised in the nice polish of the language, or on the other hand to begin the rudiments of grammar and pronunciation. These appear to be the points in which foreign masters take pleasure and excel, and they have not the same difficulties of discipline with either of these two classes of pupils as with others.

A fixed Standard of work in the Forms not yet reached.

12. It is necessary to remark in explanation of the tables of work, that the work done by *each form* in the last 12 months has been *progressive*, and is at present below what will be, after a year or more, the *fixed standard* of the form. It has hitherto risen each term, and will for so long continue to do so. This is owing to the present youth of the boys as compared with those of other schools. The average age of boys in sixth and remove is at present about $15\frac{1}{2}$ years; when the school has attained maturity it will be not less than 17 years. The regular leaving from the head of the school has not yet begun.

Sixth and Remove.

13. The sixth form is at present small in number from the same cause; 10 boys are all that can be with advantage taught together in all the highest lessons. A temporary form is therefore made, called "the Remove," consisting of 17 boys, next in proficiency to the sixth. These are taken together with the sixth in Latin, divinity, and history, and separately in Greek and in the chief part of their composition. These, as they advance, will become by degrees amalgamated with the sixth and make a lower sixth. Boys in the sixth are necessarily prefects, those in remove at present only by appointment.

Classical Forms—Modern subjects as taught in them with satisfactory results.

14. It is not perhaps necessary to enter into any further particulars with regard to the classical teaching, than are contained in Tables C. and D. In this respect the system is that of other public schools, especially resembling Rugby in method. This is the main body and trunk of the education, on which all other parts (though not provided or considered as *extras*, but as integral parts of the work) have been engrafted. This has grown more important in our experience; not less so. This seems not to suffer from the variety of interest, which within careful limits, and with a certain freedom of choice, the work presents; and while, as a rule, success in classics is attended with success in other subjects, there are not wanting instances in which the first success and encouragement which have "brought a boy out," and improved his classical work itself, have occurred in some other branch.

Modern Languages.

The progress made in mathematics and modern languages has been so far satisfactory. A fair proficiency is soon attained in French, so that in the two upper forms of the school (*i.e.* at present at an average age of 15) there is no difficulty in having the history read regularly by all in French, and it would be equally possible in the mathematical fifth if not in still lower forms.

The modern languages are decidedly popular subjects among the boys, and while many enter fairly grounded in one or the other, many also who have begun both languages in college are as forward as any boys, except those who have not only lived abroad, but while abroad have been carefully taught.

One of the languages or half of the mathematics may be excused for boys who desire to give additional time to any part of their work.

Divinity and History.

The divinity, history, and geography of the school, below sixth, are arranged in a definite order, so that the whole may be engaged on the same subject at the same time, and that a boy rising through successive forms may continue his work in those subjects without break. "The cycle" of these subjects for four years is appended.*

* CYCLE OF DIVINITY, HISTORY, AND GEOGRAPHY.

1862. Michaelmas Term.	ii. Kings. Ezra. Nehemiah. Esther.	1862. Michaelmas Term and Christmas.	Rome. To B. C. 338.	England. A. D. 1558—1649.	Ancient Italy. British Isles.
1863. Lent Term and Easter Term.	Pentateuch.	1863. Lent Term and Easter Term.	Rome. B. C. 337—202.	England. A. D. 1649—1727.	Palestine. Europe.
		Midsummer.	—	England. A. D. 1727 to present day.	India.
Michaelmas Term.	Joshua. Judges.	Michaelmas Term and Christmas.	Rome. B. C. 201—91.	England. To A. D. 1265.	England. Africa.
1864. Lent Term and Easter Term.	i. ii. Samuel. i. ii. Kings.	1864. Lent Term and Easter Term.	Rome. B. C. 91—to End.	England. A. D. 1265—1558.	Ancient Italy. Asia.
		Midsummer.	—	England. A. D. 1558—1649.	America and British Colonies.
Michaelmas Term.	Ezra. Nehemiah. Esther. Acts.	Michaelmas Term and Christmas.	Greece. To B. C. 500.	England. A. D. 1649—1727.	Ancient Greece. India.
1865. Lent Term and Easter Term.	Pentateuch.	1865. Lent Term. and Easter Term.	Greece. B. C. 500—427.	England. A. D. 1727 to present day.	Asia Minor. France.
		Midsummer.	—	England. To A. D. 1265.	British Isles.
Michaelmas Term.	Joshua. Judges.	Michaelmas Term and Christmas.	Greece. B. C. 427—394.	England. A. D. 1265—1558.	America. Australia and Colonies.
1866. Lent Term and Easter Term.	i. ii. Samuel. i. ii. Kings.	1866. Lent Term and Easter Term.	Greece. B. C. 394 to End.	England. A. D. 1558—1727.	Ancient Greece. Europe.
		Midsummer.	—	England. A. D. 1727 to present day.	France.
Michaelmas Term.	Ezra. Nehemiah. Esther. S. Matthew.	Michaelmas Term and Christmas.	Rome. To B. C. 338.	England. To A. D. 1265.	Palestine. Ancient Italy.

The Divinity will be always done in the Term. The Ancient or Modern History and Map will be done, one in the Term, and one as a part of the Holiday Task, as may be determined by the Masters. The other maps of the Term will be arranged by the Masters of the Forms.

WELLINGTON. STATEMENT.

For the Christmas examination every boy brings up a portion of some historical work chosen within certain limits by himself; this is a part of the work in which much interest is taken. The books chosen this Christmas appear in Table D.

Mathematical Forms or the "Modern School."

15. The "Modern School" differs in organization from any with which I am acquainted; it must in almost all respects be looked on as an experiment, and it ought to be premised that it has not been brought to the test of any difficult public examination.

Difficulties.

16. At the time of the formation of the school it appeared from what I could learn both in this country and from the great Real-schulen, which I visited in Germany for the purpose of seeing their operation, that when a classical and a modern school were worked side by side distinctions were likely to arise to the disadvantage of the former; that the upper boys of the modern were to have little or no personal intercourse with the Head Master; and that both schools would suffer from a want of unity in feeling, which would be most apparent among the highest boys. I should remark that I then believed the candidates for a modern school would be far more numerous than they are, and that the rules of the foundation as they then existed, would have caused more equality of age than there will really be between the upper boys of the two schools.

17. The difficulty was met in the following way:— *After the first six months* (see below) the work was thus arranged for the upper boys: They did Latin, history, divinity, and modern languages together; and when the classical boys were engaged with Greek or with Latin verses, the moderns went to mathematics. The head form (at that time "the fifth") thus consisted of a "classical" and a "mathematical" division. This scheme was gradually extended, and at present there is a mathematical and a classical division in each form down to the middle of the school; a separate modern school was thus avoided, all are equally members of the same forms, and are on the same footing as to becoming prefects.

18. It will be seen that boys in working their way up through the school follow one uniform course into which the beginning of Greek enters until they reach the middle of the school. At this point a bifurcation takes place, and boys can pursue either the mathematical or the classical course. Latin remains their chief common ground, together with divinity, history, and modern languages; but for the higher classical work a boy may substitute additional mathematics with another weekly lesson in modern languages. This, however, is not the point at which the cleverer "moderns" will usually divide from the others. It is suited for those who are backward or who are to leave school young. The more advanced now continue their Greek with a view to make it available in examinations; and as all boys have four hours a week at mathematics to which they can add two or three under a private tutor, there is time for them if forward in mathematics to continue longer in the classical divisions, and to join the mathematical divisions higher in the school.

19. As to the working of this plan it is apparently successful in diminishing the diversity of interest and feeling among the boys; it is to be observed, however, that as the age of the school increases, there will not be many of these boys in the sixth form, as they will leave earlier than those who go to the University. At present there are only two in the sixth and two in the remove. The fifth is nearly equally divided, but most of the mathematical division will shortly leave, while the classical will increase. In other forms the mathematical division is about a fifth of the whole form, making in all 23 boys in mathematical divisions. The proportion is smaller than was originally expected.*

The System as conformed to the work of certain Examinations.

20. With the exception of two or three boys who have been placed in these divisions on account of their backwardness in classics, with the hope that they might succeed better in other subjects, all the boys have joined them with the object of preparing for some special examination; the better mathematicians for Woolwich, the others chiefly for Sandhurst. I believe no boy has yet been placed in them by his friends from a conviction of the superiority of this mode of education.

Imperfect for wider purposes.

21. The progress made seems to be fairly satisfactory as an experiment. Yet it cannot be denied that there is on the whole an apparent decrease of zeal in work if those who join the mathematical divisions are compared with those remaining in the others.

Probable cause of defects.

22. Observation leads me to assign the following causes for this fact:—(1.) From having to look forward to an earlier testing of their knowledge than other boys, they are inclined to confine their attention to such parts of a subject as they believe to be more immediately useful, to care less for illustrative reading or the illustrative part of their teaching. (2.) There is naturally a tendency, in choosing the subjects to be taken in for such special examinations, to be guided by the proportionate ease with which marks can be gained; and thus to neglect, if enforced, and to abandon if not enforced, those which may be more improving and more permanently useful for those in which it appears that more candidates qualify themselves. Thus, a boy who has been working for two or three years at German, or who has been thoroughly grounded in the theory and practice of elementary chemistry will not at last take in those subjects for examination on account of what is supposed to be the greater difficulty of doing good papers in them. (3.) There is also a certain sense of unsoundness even in the principal subject, mathematics, which operates to decay the interest taken in it, an uncertainty in the most important earlier portions, which, with all its consequences, is plainly owing to the fact that in the examinations to which these boys look forward high rewards are attached to branches of mathematics beyond what can be fairly reached by an industrious boy of average abilities at the age of entrance, supposing such a boy to enjoy the active social existence of a public school. The same cause accounts for observations made to me by masters of the short space of time sufficient to make these boys forget some important portion of a subject with which they had lately been familiar for a time. (4.) The number of masters with whom a boy in the modern department has to work dissipates the personal interest which bears so importantly on a boy's character and work. While others are in close communication with one form master the principal part of each school day, the "moderns" have at most one lesson with him, and sometimes none. They spend more time with their mathematical master, yet much less than in the other case; much, too, even of this is spent in silent work on paper, and it is obvious that the subject itself affords less opportunity than literary subjects for cultivation of judgment and taste. A mathematical master cannot stand to his division in the same general relation as a form master to his classical form. Again, part of their time is spent with a history master, part with a chemical, part with a drawing master, over and above the lessons which, like the rest of the school, they receive from French and German masters, and in all these transitions personal influence escapes. Masters of whom a boy sees very little are apt to appear to him to be simply professors, instead of being friends and guides, with a real personal interest in him, as he knows those masters to be with whom he becomes thoroughly acquainted.

23. Thus, I am compelled to believe that the variety and amount of the subjects required of these boys has not only a somewhat unfavourable effect upon their progress,—upon the accuracy, reality, vividness, and permanence of their knowledge,—but to some extent interferes with their deriving other benefits from the system and associations of a public school.

Desiderata for a Modern Education of a different nature.

24. The experiment *might* succeed of forming with some modern elements a curriculum intellectually and morally useful in ordinary life, supposing that grammars and handbooks were properly systematized, supposing that a supply of masters could be found capable of teaching modern languages and literature with the precision, force, and interest with which classics are read and taught, supposing that there were worthy examinations, which like university examinations would thoroughly test and stamp

* The fifth being the actual and permanent nucleus of this scheme it has been thought advisable to give the Table of work D. for these, and to refer the Mathematical Sixth to that table.

the student without regard to special professions, and supposing that there were after this a market open to which he could carry his knowledge and his skill. But this experiment has not been tried in any sense, because there are neither appliances nor teachers nor tests nor outlets for the taught.

Danger of multiplying Subjects and sub-dividing Time.

25. As to the limit of the number of subjects and the time which can be profitably devoted to them we found the experience of the first six months useful. It was a simple experiment (untried before, so far as I know) which it was necessary to try while the mass of new boys was growing socially into an organized school.

The whole amount of working hours in a week was divided into four equal portions, one of which was given to classics, one to mathematics, one to modern languages, and one to historical work, chemistry, and drawing. At the end of six months there was a general sense of despair among the masters; the boys had worked and had been most anxiously taught, but little or no progress seemed to have been made, and little or nothing retained for examination purposes.

At the end of that time was made the division of work detailed above, in which classics became the staple for one set of boys, mathematics for those who most or soonest required it, and the time given to other subjects was greatly diminished for both.

From that time began a steady and rapid improvement. The modern languages were better done by both sets than before, though less time was given to them. The power of steady work and the faculty of reflection seemed to be better cultivated by giving a large portion of one kind of work and a small portion of another, than by dividing the time equally between both, and this seemed to operate towards more certain progress even in that part which now occupies less time.

Lastly, it appeared that in those subjects in which they still worked together, the classical divisions were making more rapid progress than the mathematical. For a few months they even kept up with them in mathematics so far as to be capable of being taught with them by the same master in those hours which they had in common. And although this could not continue in mathematics (4 hours weekly being set against 10), yet, as will be gathered from what I have said above, the *proportionate* advance of classical forms in mathematics, and their actual advance in other subjects has been the more vigorous and the more substantial.

(Signed) E. W. BENSON.

CONSPECTUS of the MATHEMATICAL ARRANGEMENTS and WORK of the CLASSICAL FORMS.

Name of Set.	No. of Boys in Set.	Work done.	Books used and Remarks.
Upper School.			
1	11	Euclid, Algebra, Trigonometry (1 Conic Sections.)	Potts' Euclid; Todhunter's Algebra; Beasley's Trigonometry; Barnard Smith's Arithmetic. [The above books are used as required throughout the School.]
2	11	Euclid, Book I.—III. Algebra to quadratics.	
3	11	Euclid, Book I., II. Algebra to fractions. Arithmetic.	
Middle School.			
1	15	Euclid, Book I., II. Algebra to Progressions & Binomial Theorem.	*Note.*—There are two Examinations annually of the whole School in Arithmetic, previous to which all the sets do Arithmetic, *vice* Algebra, &c., for a fortnight.
2	16	Euclid, Book I., II. Algebra to Fractions.	
3	16	Euclid, Book I. begin Algebra.	
4	16	Euclid, Book I., 1 to 26 propositions. Arithmetic.	
5	17	Arithmetic } These 2 sets do nearly the same work and promotions are made from *both sets* into set 4.	
6	19	Arithmetic }	*Note.*—Boys are promoted from the 1st of Lower School into 4th Set of Middle School.
Lower School.			
1	15	Arithmetic: Vulgar and Decimal Fractions: Reduction of the same; and Rule of Three: Square and Cube Root.	
2	16	Arithmetic: Vulgar and Decimal Fractions.	
3	20	Arithmetic: Reduction and simple rules: begin Fractions.	
Second Form.	12	Arithmetic: Reduction, &c.	Colenso's Small Arithmetic.

CONSPECTUS of the MATHEMATICAL WORK DONE in the MATHEMATICAL DIVISIONS.

Name of Set.	No. of Boys in Set.	Work done.	Books used.
Math. Upper School.	12	Euclid; Algebra; Trigonometry; Elementary Statics and Dynamics. Notes on Differential Calculus and Conic Sections.	Potts' Euclid; Todhunter's Algebra; Todhunter's Trigonometry; Beasley's Trigonometry; Wrigley's Examples; Goodwin's Elementary Statics; Goodwin's Elementary Dynamics; Mathematical Table (Chambers' Educational Course).
Math. Upper Middle.	11	Euclid: Algebra to Progressions.	

WELLINGTON COLLEGE.] TABLE C. - - - - -

RETURN of WORK done in certain selected Forms

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1862.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
SIXTH FORM AND REMOVE, 27 BOYS.	Acts of Apostles, *Alford, Humphrey;* Epistles to Timothy, *Alford, Ellicott;* Thucydides, *Bekker, Arnold;* Virgil, *Conington, Forbiger;* Sophocles, *Wünder, Schneidewin;* Aristophanes, *Holden;* Horace, *Maclean, Orelli;* Cicero de Officiis, *Arnold;* Homer, *Oxford edition of Heyne;* Livy, *Raschig;* Euripides, *Paley.* Besides the above, Dindorf's or Teubner's Editions of the same, and of Demosthenes. Smith's Greece; Guizot's Revolution d'Angleterre. *French in Upper School Sets.* Harrig and Burguy's France Littéraire; Havet's large French Class Book; Gasc's composition; Marriette's Half Hours of French Translation. *German, Upper School Sets.* Viehoff's Deutsche Litteratur; Goethe's Iphigenie; Schiller, Jungfrau v. Orleans; Otto's German Conversation Grammar; Rugby German Accidence. *Mathematics.* Potts' Euclid; Todhunter's Algebra and Trigonometry; Beasley's Trigonometry; Goodwin's Statics and Dynamics; Wrigley's Examples. *Mathematical Divisions.* Student's Hume; Marsh's English Language; White's Eighteen Centuries; Fowne's Chemistry; Penn's Orthographical Projections; Pease's Practical Geometry.	Smith's Bible Dictionary, and Dictionaries of Antiquities, Biography, and Geography; Liddell and Scott's Lexicon; Freund's, Smith's, and Riddell's Latin Dictionaries; Yonge's Dictionaries; Mencke's Ancient Atlas; Butler's Modern Atlas; U.K. Society's Maps; Keith Johnstone's Atlas. In illustration of History and Divinity have been used by various boys: Grote's Greece; Clarendon's Rebellion; Pictorial History of England; Conybeare's and Hewson's St. Paul; Smith's Voyage and Shipwreck of St. Paul.	Demosthenes, three private orations; Aristophanes, Vespæ; Sophocles Philoctetes; Cicero de Officiis, I.; Livy V., c. i. to xiii.; Thucydides VI., i. to xxxiii.; Vigil Æn. V., Georgic IV., Ecl., iii. to x.; Horace, Satire, I. Acts of Apostles xiv. to xxviii; 1st Epistle to Timothy. The Remove read Hecuba and Orestes 1-400 instead of Vespæ or Philoctetes, and Olynthiac I., instead of Thucyd. *French (Upper School.)* The selections in La France Littéraire from Leclercq, Janin, Béranger, Lamartine (verse) and Dumas. *Additional in Math. Div.* Florian and Lamarmartine (prose). *German.* Set. 1. Iphigenie (Goethe) Acts i.–iii., and Jungfrau v. Orleans (Schiller) Acts i. and ii. Set 2 and 3, Schiller, Schlacht bei Lützen; Burger's Lied v. Braven Mann; Graf v. Hapsburg; Jungfrau v. Orleans, Acts i. ii.	From 3 to 5 boys set on successively to translate; each reads a passage in Greek or Latin, and then reads it off into English continuously. Any inaccuracy indicated to him at once by questions bearing on the translation he gives; if he fails to see the point, it is put to others in a similar shape, any error of theirs suggesting other questions. An accurate reading obtained the boy proceeds. Often he repeats so that he may see clearly through the structure of his own English. The whole having been translated, the same or other boys are required to translate it afresh, correctly and fluently, or else the master translates it. Matter and thoughts are made subjects for illustration, comment, and question. The grammar and parsing, the moods, the connexion by particles, latent connexion of clauses, furnish numerous close questions. Allusions historical, geographical, &c., are required to have been worked out by the boys themselves. Marks given for translation and answers. A description of the mechanical method gives no idea of what an actual lesson with elder boys is. The 6th and Remove have hitherto been taught separately in Greek and composition. The composition master takes Remove in separate work, as well as the De Officiis and Horace Sat. mentioned in D. The extra classical lesson mentioned on Tuesday is for boys excused some other work, as mentioned in letter, par. 14. It consists of exercises in higher syntax, Greek or Latin, or of some lesson in philology, or classical antiquities.	About 200 lines of Ovid and Virgil; Georgic III., 640 lines. Most of Ep. I. to Timothy to retranslate from English version. As extra lines at Midsummer and Christmas one of the following,— 250 lines of Horace; 200 Virgil; 150 Homer. In Remove 300 of Scott, Tennyson, or Macaulay.	Under this head come specially Divinity, mentioned in 3; Smith's Greece c. xxviii. to xxxvii.; Guizot Revolution d'Angleterre, 1625–1634, and the "extras," viz. 250 or 300 pages of one of the following books: Arnold's Rome; Grote's Greece; Elphinstone's India; Prescott's Mexico; Trench's Study of Words; Irving's Mahomet and his Successors. But the matter is required as well as the words in all the classical work.

Methods employed to test individual Proficiency in such "other Subjects."
	ORIGINAL.					
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	20 copies of elegiacs or hexameters, minimum 20. (Fewer original and more translation in remove).	None.	None.	1. *Modern history with Math. VI. and V.* Student's Hume, 2 hours a week; James I. to George I.; Marsh's Lectures on English grammar, 1 hour a week; 1 copy of original English prose or verse weekly. 2. Chemistry. 3. Drawing, which in this part of the school is alternative, with 4. Music, the theory and vocal practice. 5. French, 2 hours a week. 6. German, 2 hours a week. 7. Mathematics, 4 hours a week.	1. "The questions asked are generally answered on paper by the whole form, each pupil adjudging marks to the answers of one who sits next him, when the correct answer has been given by the master. Sometimes all the answers are read aloud and criticised; now and then the lesson is heard *vivâ voce*, and places are taken. Once or twice in the term questions are set on all that has been previously done, and the answers on paper are sent up to the master." 2. "The pupils learn from 3 to 5 pages of Fowne's Manual of Chemistry in the week. Once a week they are examined, and if found sufficiently acquainted with the lesson are directed to prepare for themselves such experiments as will illustrate the week's work. For this purpose a laboratory is arranged to accommodate 10 or 12, as many as one teacher can direct at a time. An hour a week is given to practical working in the laboratory, and a quarter of an hour to the examination in the week's work. The senior class, in which there are pupils of the third year, is sufficiently advanced to make most of chemical substances used in the arts and manufactures, and to conduct a simple analysis. At the end of each term the pupils are examined by written questions, and are required to make some chemical substance, and to conduct a simple analysis." 3. Examination at Midsummer and Christmas, marks during term. 4. Examination at Midsummer and Christmas, marks during term.
Prose.	30 in Mathematical Division.	10 Latin essays, minimum 35 lines.	None.	2 letters and 2 essays in French by first set (third term only).		
	TRANSLATION.					
Verse	2 copies from Greek.	23 copies elegiacs or hexameters. 14 lines minimum.	33 from Beatson, 14 lines minimum. In 3rd term, the more advanced have done Shakespere.	None.		
Prose.	2 a week in school. Till 3rd term 1 a week.	24 copies, chiefly translated from Kennedy's Materials for Latin Prose Composition.	3.	French, 2 passages weekly from Gasc or Marriette. Set 1 sometimes French into English instead. German, 2 weekly passages from Otto. Some of the more advanced various pieces from English writers.		

5, 6, 7. The instruction in these is described in letter, and in conspectus of mathematical arrangements. Marks are given in fixed ratio for their maximum to the maximum of classical subjects during the half year, and for the examination also, in which 2 papers are set in each modern language, and 3 or 4 in mathematics. They now bear very importantly on a boy's place and promotion in the school.

WELLINGTON COLLEGE.] TABLE C.—*continued.*

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1861.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory and the Quantity of each in the same Year.	6. Authors whose Substance and Matter and been committed to Memory and the Quantity of each in the same Year.
FIFTH FORM, 19 BOYS.	The English Bible; Greek Testament (*Oxford* 1856, *Cambridge Text*, 1860); the Vulgate (*Leipsic*, 1840); Tomlin's Introduction to the Study of the Bible; Herodotus, *Bekker's Text*; Æschylus, *Paley's annotated edition and Cambridge Text*; Thucydides, *Cambridge Text*; Horace, *Macleane's large and small editions and Cambridge Text*; Livy, *Bekker's Text, edited by Raschig*; Cicero's Orations, (*Arnold's Selections*); Arnold's longer Latin Exercises, Part II.; Beatson's Greek Iambics; Arnold's Latin Verse Composition; *Eton selections of* Ovid; Virgil, *Cambridge Text*; Wordsworth's Greek Grammar; Kennedy's Latin Grammar; Smith's History of Greece; Liddell's History of Rome. *French, German, and Mathematics.* The books used in these subjects by Fifth Form boys are those given in Table C. for the Sixth Form and Remove. *Mathematical Division.* The same books as in the Mathematical Division of the Sixth Form.	Smith's Biblical Dictionary (referred to in the Library); Liddell and Scott's small Lexicon; Yonge's English-Greek Lexicon; Latin Dictionaries, Yonge, Riddle and Arnold, Smith; Smith's Classical Dictionary for Schools, and Dictionary of Antiquities; Linwood's Lexicon to Æschylus; Mencke's Ancient Atlas; Butler's Modern Atlas; Nugent's French Dictionary; Flügel's German Dictionary; Hamel's French Exercises; Chambers' Tables of Logarithms.	St. Matthew, ch. vii.–xix., in Latin and Greek; Herodotus, VII. ch. ccii.-end, VIII., ch. i.-lxvi.; Æschylus Persæ, i.–dxxx.; Thucydides I., ch. xxiv.-lvi.; Horace, Odes, Books II., III., IV.; Cicero, Cataline, II., III; Livy, XXII., ch. i.–xl. French, (by mathematical division), Florian and prose extracts of Lamartine in "La France Littéraire."	A boy is desired to read one or more sentences of the lesson in the original language, amounting in general to 5 or 6 lines. As he reads, mistakes of quantity and pronunciation are corrected, and he is instructed to convey his impression of the meaning by placing correct emphasis upon the words, as if he were reading his own language. He then translates, giving his own version in English. As boys generally come into this form unaccustomed to free translation they often have practically to take the Latin or Greek words with the English, especially when a passage is rather difficult, but it is endeavoured to make them acquire as soon as possible the habit of translating at once into corrected English. While the translation goes on mistakes of inaccuracy or baldness are noted, and the boy himself desired to correct them; if he fails to do so, the question is passed to the form, the master trying to draw from the boys themselves what will be the best expression, and passing judgment upon those which they have suggested. At this time also questions are asked generally through the form as to any points of grammar or history that seem to require immediate explanation, and if the passage has been much interrupted in this way, when the boy has finished he either translates it continuously himself, or more frequently the master does so; the object being to obtain first of all strict accuracy, and after that, readiness and elegance of expression. The passage thus translated is then reconsidered, and questions are passed round the form for explanation of the words, constructions, and allusions, so that no doubt may remain regarding either the grammar or the meaning. The master is always glad to promote any intelligent asking of questions by the boys themselves, and encourages them to state their own difficulties, which he endeavours to clear away. When the first passage has been carefully examined in this way, and no peculiarity left unnoticed, illustrations of words from other languages which the boys are acquainted with and parallel passages having been introduced, a second piece is read and translated by another boy and commented on in the same way. About five boys would on an average be set on in the course of a lesson. It should be added that every classical translation lesson (except two, which are preceded by repetitions) begins with a piece of grammar, parts of which are committed to memory, while of other parts the meaning is required to be known with examples; in the questions asked and explanations given reference is constantly made to this, and especially, when possible, to the part done before the particular lesson. When the entire lesson has been translated, it is again gone over by one boy or more; the larger portion translated, with the knowledge obtained during the lesson, enabling them to do this in general with fluency; a sure criterion is also thus afforded of previous attention, and while this second translation is being proceeded with, the master is expressly particular in observing the attention of the boys, and in setting on any one who seems to be careless. This has been found a much more useful practice in general than a translation by the master, but that is often employed to give the boys a general idea of the passage, in conjunction with the other plans. Sometimes again at the end of a lesson the boys are desired to shut their books, and short sentences in illustration of the lesson are given for them to turn into Latin *vivâ voce*, this exercise also forming a part of the questions which have been asked at intervals during the lesson.	Horace, Odes, III., 1-12; Virgil's Æneid, IV., 1–250 (by mathematical division); Ovid (by classical division) 250 lines from the Fasti in the Eton selections. Greek grammar; accidence and anomalous verbs. 350 lines of one of the following learnt by each boy as an extra:— Macaulay's Lays; Coleridge's Ancient Mariner; Marmion; Lay of the Last Minstrel; Byron's Mazeppa; or 300 lines of Paradise Lost.	Books of Samuel and Kings, Ezra, Nehemiah, Esther. Liddell's Rome, Jugurthine War to the end of the Republic. Smith's Greece; from Persian Wars (p. 151) to surrender of Platæa (p. 295.) Student's Hume, to the Conquest, and from the beginning of the Tudor period to George I.; White's Eighteen Christian Centuries, the first fourteen centuries; Marsh's Lectures on English Grammar, the first six. (The ancient history by the classical, the modern history and literature by the mathematical division.) Also one of the following learnt by each boy as an extra: — Hallam's Constitutional History, first four chapters; Arnold's Rome, half the third volume: Bacon's Henry VII.; Trench on the Miracles, the introduction and first six Miracles; Kennedy's Latin Grammar, syntax, ss. 101–184; Wordsworth's Greek Grammar, ss. 95–106, 110–115.

	7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.				8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
	ORIGINAL.					
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	5 poems on various subjects (by mathematical division).	3 copies of elegiacs, 1 copy of hexameters minimum 12 lines, (they have only begun to do original composition this term).	None.	None.	Under this head may be placed:— (*a*) The Old Testament lesson which is done on Sunday afternoon, as, from the scarcity of books of reference on the subject among the boys, it partakes of the nature of a lecture. In this way facts, illustrations, and explanations are given which the boys would not be likely to find out for themselves, and it is endeavoured to create an intelligent interest in the subject. (*b*) One hour of French instruction given to the mathematical fifth in common with the other mathematical divisions of the upper school, and which, as being the only extra hour in modern foreign languages, is of the utmost importance. The boys are always required to be prepared with the translation of at least one column in La France Littéraire. They generally begin by writing out the English of a short passage not before seen, in which those only are allowed dictionaries who are backward; then the passage which was written the previous time is commented on, the boys having had their translations returned to them with marks for corrections. After this, according to time, either some of the piece learnt is read and translated; or sentences are written upon the board containing errors to be corrected; or some remarkable idioms and peculiarities in the language are explained and given to be taken down and remembered, the boys being at any time allowed to ask questions upon their difficulties. Sometime also a dictation has been given, or an examination in the irregular verbs, but these not often, as forming part of the regular work done in the sets of French. (*c*) One composition lecture upon the copy shown up on Tuesday. Each boy's exercise is given back to him with the errors amended or marked. A fair copy of the exercise is then read and explained sentence by sentence, the different constructions being noted and reason given for one being preferred to another. In the best of the exercises care is taken, as much as possible, to retain the composer's own words, that necessary changes of idiom, &c., may seem to grow naturally from the composition and not to be thrust upon it. (*d*) English history and literature. (*e*) Chemistry, described in Table for Sixth form. Quantities read are described in cols. 3 or 6.	(*a*) Questions are at the same time fully asked upon the simple narrative, which soon discover whether a boy has done his best to master the lesson. (*b*) Boys are put on to translate, as in classical construing lessons, and questions of the same nature are passed round the form after each piece has been finished. When sentences are written down or idioms explained, each boy is asked some question upon them in turn, that the true answers may if possible be elicited from the boys themselves. (*c*) Each boy is desired to make the proper corrections in his own exercise. (Three copies of the classical and two of the mathematical division are looked over with each boy singly.)
Prose.	30 essays on various subjects (by mathematical division).	2 Latin themes, minimum 25 lines.	None.	2 letters and 2 essays in French by the first set (they have only begun to do them this term).		
	TRANSLATION.					
Verse.	None.	*In School.* 3 sets only (they have usually done Greek iambics) as many as they can do, between 8 and 4. *Out of School.* 26 copies of elegiacs, 3 of hexameters from English poetry (8 lines) about 18 of elegiacs, 3 of hexameters, and 4 of alcaics from Arnold's prose Composition, 10 or 12 lines.)	*In School.* 30 sets of iambics from Beatson, as many as they can do in an hour and a half. Each verse is brought up to the master by each boy as soon as done, it is at once corrected and marked. *Out of School.* 33 sets from Beatson (minimum 8 lines.)	None.		
Prose.	*In School.* (All by mathematical division.) About 12 pieces from Livy, Virgil, Horace, or Cicero. About 18 short pieces from various French authors (besides what is done in sets). *Out of School.* About 6 pieces from the above Latin authors.	*In School.* 30 pieces (with dictionary) during one hour from Arnold's longer Latin Exercises Part II., (classical division). *Out of School.* (Math.) 60 passages from Arnold (average 18 lines). (Classical) 27 passages from various English authors.	*In School.* 3 short pieces.	French (in sets 1, 2) 2 passages a week, 1, Gasc's Composition; 2, Marriette's Half Hours, (set 1 sometimes writes a translation from French into English instead). German (in sets 1, 2, 3) 2 passages a week, varying in difficulty from Otto's grammar. Some of the more advanced translate from various English authors.		

WELLINGTON COLLEGE.] TABLE C.—*continued.*

	1. Authors or Books used (not being mere Books of reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *viva voce*, and the Quantity of each in the Year ending with Christmas 1862.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory and the Quantity of each in the same Year.
UPPER MIDDLE, FIRST FORM, 22 BOYS (17 Classical, 5 Mathematical).	*T. K. Arnold's* Homer's, I. to IV. (Eschyli Prometheus Vinctus, *Oxford Text and Notes*); *Merivale's* Sallust *for Schools*; Virgil (*Cambridge Text*); *Eton* Electa ex Ovidio; Kennedy's Latin Grammar; Wordsworth's Greek Grammar; Liddell's Rome (abridged); Smith's Greece; Moberly's Latin Verses; Arnold's Longer Latin Prose Exercises, Part I.; Beatson's Greek Iambics; *Cambridge* Greek Testament; Vulgate (in Mathematical Division). *French* (*Middle School*). Andreé Littérature Française; Hamel's French Exercises; Grammaire des Grammaires. *German* (*Middle School*). Solling's Reader; Otto's Conversation Grammar; Rugby German Accidence; Otto's First German Book.	Liddell and Scott's smaller Lexicon; Yonge's English-Greek Lexicon; Yonge's English-Latin Lexicon; Riddle's Latin-English Lexicon, (smaller); Carey's Gradus ad Parnassum; Mencke's Ancient Atlas; Smith's smaller Classical Dictionary.	Virgil, VI., 100 to end; Virgil, IV., 1-450; Sallust, Jugurtha, 1–34; Ovid, Eton Electa, 12 pp. By Classical Division only: Homer's Iliad, II. 1-200; Homer's Iliad, III.; Eschylus Prometheus Vinctus, 1 to 450. *French of Middle School.* Andreé Littérature Française, pp. 17 to 33, and pp. 134 to 142 (prose); and pp. 281 to 300, pp. 212 to 221 (poetry). *German of Middle School.* Set 1 as Sets 2 and 3 of Upper School; Set 2, Solling's Reader, 30 pp. (28 to 59); Set 3, Solling's Reader, 20 pp. (28 to 48); Set 4, Otto's First German Book, pp. 26 to 64.	Boys are chosen at random to construe and parse three or four lines, and to answer any questions suggested by the lesson. Any mistakes are passed on. There are two distinct kinds of marks given, one by the performance of the boys put on, the other by the questions answered. Places are not taken. A boy in the Classical Division is, on the average, put on four times a week; in the Mathematical, twice. In every lesson a boy has from three to ten questions passed to him. Two or three lessons are prepared in school. Composition in school is not looked over while being done; but the master is prepared to answer any questions that may be asked. Verse Exercises are looked over with the boys separately, either out of school, or while composition is being done, or lessons being prepared in school. Prose exercises are sometimes, also, commented upon in class, besides being looked over separately.	*Classical Division.* Virgil, 300 lines; Ovid, 200 lines; Scott or Tennyson, 350 lines. *Mathematical Division.* Ovid, 200 lines; Shakspere, 300 lines; Scott or Tennyson, 350 lines.	Liddell's Rome, pp. 1 to 100, Smith's Greece, pp. 200. *Divinity:* Samuel, I. and II.; Kings, I. and II.; Ezra; Nehemiah; Esther.
FOURTH FORM, 32 BOYS.	Cæsar; Ovid, *Selections by Cookesley*; Greek Delectus; Mrs. Markham's History of England; Cornwell's Geography; Barnard Smith's Arithmetic; Ellis' Latin Exercises; Penrose's Latin Verse Book; Wordsworth's Greek Grammar; Eton Latin Grammar; Grammaire des Grammaires; Gasc's First French Book; Havet's Exercises.	Latin Dictionary (usually Yonge's or Riddle's); Butler's Modern Atlas.	Ovid, about 250 lines. About 10 chapters of Cæsar are taken up each term; Greek Delectus, about 9 pp. The form has not learnt Greek Delectus long.	In each lesson about six boys, in different parts of the form, are called upon to construe; each of these after construing a few lines, is asked several questions, intended to test his knowledge of the passage, especially of its grammatical construction. All mistakes are "passed down" and places taken. The boys have marks for their construing, and are also marked according to the place they hold at the end of the lesson.	Ovid, about 200 lines; Macaulay's Lays of Ancient Rome, 350 lines.	One of the following books at the option of the boy:— Macaulay's Essays on Clive or Warren Hastings; Southey's Life of Nelson; Stanley's Canterbury; Barrow's Life of Drake; Trench's Study of Words; Trench's English Language; Trench's Lessons in Proverbs. Mrs. Markham's History of England, James I. to George III. Cornwell's Geography, Asia, Africa, North America, and England.

Return showing the Employment of Time in Lessons by the several Forms or Divisions and the Composition done by them, during the Year ended at the Summer Holidays 1862.

Sixth Form and Remove, 27 Boys.

No. 1.—Lessons and Compositions during two Terms ending July 29, 1862.

Lessons.		Compositions.
Sunday	3¾ to 4¼. Acts of Apostles in Greek.	3; shown up Tuesday, Thursday, Saturday. 1 Latin verse, original or translated. 1 Latin prose, original or translated. 1 Greek verse translated, and 1 translation in school into Greek or Latin. These occasionally give way to English essays or rarely to English verse. Thursdays, being Headmaster's copy, so arranged as to give him each kind in turn. The composition of 6th done in school always comes to Headmaster.
Monday	7 to 8. As Sunday. 11¼ to 12¾ 1st Term, Aristoph. Vespæ. 2nd, Soph. Philoct.* (Rem. Eur. Hec.) 12¾ to 1¼. Translation at sight from Greek or Latin (or Chemistry). 3¾ to 4¼. Mathematics. 5 to 6. Aristoph.; Soph. (Eur.)	
Tuesday	7 to 8. Virgil.* 10 to 11. Mathematics. 11¼ to 12¼. Extra classical lesson. 12¾ to 1¼. French.	
Wednesday	7 to 8. 1st Term, Aristoph. 2nd, Demosth. (Rem. Hecuba.) 10¾ to 11¼. German. 11¼ to 12¾. History of Greece. 2¼ to 3¾. Drawing, or 2¾ to 3¼ Music. 5 to 6. Cicero.	
Thursday	7 to 8. Virgil.* 10 to 12. Mathematics. 12 to 1¼. Composition, Greek or Latin in school.	
Friday	7 to 8. As Wednesday, 7 to 8. 10¾ to 11¼. Composition. 11¼ to 12¼. As Monday, 11¼ to 12¼.* 2¼ to 3¼. French. 5 to 6. Cicero.	
Saturday	7 to 8. Virgil.* 10¾ to 11¼. German. 11¼ to 12¼. Cicero.	

Summary of Lessons.

Greek and Latin (including composition in school)	14¾ or 15½
Mathematics	4
Divinity	2
History	1
French	2
German	2
Drawing 1¼ or Music ¾	1
	27½ hours.

Deduct 2 hours French, German, Mathematics, or the Classics, 25½ or 26½ hours.

* These three Latin and two Greek lessons attended by Mathematical Sixth, two boys; (or three History lessons with Mathematical Fifth attended instead of Greek.)
The remainder of the lessons of Mathematical Sixth are the same as those of Mathematical Fifth. (See sec. 19 in Letter.)

No. 2.—Lessons and Compositions during Term ending Dec. 23, 1862.

Lessons.		Compositions.
Sunday	3¾ to 4¼. Greek Testament. Epp. to Timothy.	As in No. 1.
Monday	7 to 8. As Sunday. 11¼ to 12¾. Iliad, XVIII.* (Remove, Orestes.) 12¾ to 1¼. Translation at sight from Greek or Latin (or Chemistry). 3¾ to 4¼. Mathematics. 5 to 6. Thucydides VI. (Rem. Demosthenes. Ol. I.)	——
Tuesday	7 to 8. Livy. V.* 10 to 11. Mathematics. 11¼ to 12¾. Extra classical lesson. 12¾ to 1¼. French.	——
Wednesday	7 to 8. Thucydides. (Demosthenes.) 10¾ to 11¼. German. 11¼ to 12¾. History. Guizot's Revolution d'Angleterre. 2¼ to 3¾. Drawing, or 2¾ to 3¼ Music. 5 to 6. Hor. Sat. I.	——
Thursday	7 to 8. Livy.* 10 to 12. Mathematics. 12 to 1¼. Composition in school.	——
Friday	7 to 8. As Wednesday. 10¾ to 11¼. Translation at sight from Greek or Latin. 11¼ to 12¾. Iliad.* 2¼ to 3¾. French. 5 to 6. Horace.	——
Saturday	7 to 8. Livy.* 10¾ to 11¼. German. 11¼ to 12¾. Horace.	

Summary of Lessons.

As in No. 1.

* As in No. 1, these lessons attended by Mathematical Sixth and Remove (4 boys). The remainder of their work given under Mathematical Fifth. (See Letter, sec. 19.)

Fifth Form, Classical Division, 10 Boys.

Lessons marked thus * are done by the Mathematical and Classical Divisions together.

No. 1.—Lessons and Compositions during two Terms ending July 29, 1862.

Lessons.		Compositions.
Sunday	3¾ to 4¼.* Historical books of Old Testament in the English Bible.	——
Monday	7 to 8. Greek Testament. St. Matt. 10½ to 11¾. Herodotus. Book VI. 12¼ to 1¼. *1st Term*, Cicero, Cat. ii. *2nd Term*, History of Rome. 3¾ to 4¼. Mathematics. 5 to 6. *1st Term*, History of Rome. *2nd Term*, Herodotus.	Latin prose, an easy piece from an English author, or a translation, generally about 20 lines.
Tuesday	7 to 8. * Horace. Odes, Book III. 10 to 11. Mathematics. 12¾ to 1¼. French. 5 to 6. (*only during 1st Term*) Mathematics.	
Wednesday	7 to 8. Latin repetition and Herodotus. 10½ to 11¾. German. Set 3. 11¼ to 12¾. *1st Term*, Cicero. *2nd Term*, * Cicero. 12¼ to 1¼. German. Sets 1 & 2. 3¾ to 5. Drawing. 5 to 6. History of Rome (sometimes changed for Greek).	Latin verse, almost always elegiacs. *1st Term*, 12 verses from Arnold's Introduction. *2nd Term*, 8 from English poetry.
Thursday	7 to 8. * Horace. 10 to 12. Mathematics. 12 to 1¼. Verse composition in school (generally Greek iambics).*	Latin verse.
Friday	7 to 8. Latin repetition and Herodotus. 10½ to 11¾. Prose composition in school. 11¼ to 12¾. *1st Term*, * Horace. *2nd Term*, * Cicero. 2¾ to 3¾. French. 5 to 6. Herodotus.	——
Saturday	7 to 8. * Horace. 10½ to 11¾. German. Set 1. 11¼ to 12¾. Herodotus. 12¾ to 1¼. German. Sets 2 & 3.	Greek iambics, from Beatson. *1st Term*, Minimum 6. *2nd Term*, 8.

	27 hours.

No. 2.—Lessons and Compositions during the Term ending December 23, 1862.

Lessons.		Compositions.
Sunday	3¾ to 4¼. * Historical books of Old Testament.	——
Monday	7 to 8. Greek Testament. St. Matt. 10½ to 11¼. Æschylus, Persæ. 12¼ to 1¼. History of Greece. 3¾ to 4¼. Mathematics. 5 to 6. Thucydides. Book I.	——
Tuesday	7 to 8. * Livy. Book XXII. 10 to 11. Mathematics. 12¾ to 1¼. French.	One copy alternately, Latin prose and verse; the English given on Saturday.
Wednesday	7 to 8. Repetition and Æschylus. 10½ to 11¼. German. Set 3. 11¼ to 12¾. * Livy. 12¼ to 1¼. German. Sets 1 & 2. 3½ to 5. Drawing. 5 to 6. History of Greece (often changed for Greek).	
Thursday	7 to 8. * Livy. 10 to 12. Mathematics. 12 to 1¼. Verse composition in school.	Latin verse; original or translation, occasionally Latin theme.
Friday	7 to 8. Repetition and Thucydides. 10½ to 11¼. Prose composition in school. 11¼ to 12¾. * Livy. 2¾ to 3¾. French. 5 to 6. Æschylus.	
Saturday	7 to 8. * Livy. 10½ to 11¼. German. Set 1. 11¼ to 12¾. Thucydides. 12¾ to 1¼. German. Sets 2 & 3.	Greek iambics from Beatson.

Summary of Lessons.

As in No. 1.

FIFTH FORM, MATHEMATICAL DIVISION, 9 BOYS.

Lessons marked thus * are done by the Mathematical and Classical Divisions together.

No. 3.—Lessons and Compositions during the year ending December 23, 1862.

	Lessons.	Compositions.
Sunday	3¾ to 4¾.* Historical books of Old Testament.	—
Monday	7 to 8. Mathematics. 9½ to 10½. Latin Testament and Tomline's Introduction. 11½ to 12½. Mathematics. 12½ to 1½. Chemistry. Set 2. 2½ to 3½. Chemistry. Set 1. 3½ to 5. Drawing. 5 to 6. Mathematics.	Latin prose from Arnold's longer Exercises, part ii. about 25 lines. Sometimes a written translation in English from Livy, Virgil, or Cicero.
Tuesday	7 to 8.* 1*st & 2nd Terms*, Horace. 3*rd Term*, Livy. 10 to 11. English History. 12½ to 1½. French. 2½ to 3½. or Mathematics. 5 to 6	English essay or poem (subject given on Friday or earlier).
Wednesday	7 to 8. Mathematics. 10½ to 11½. German. Set 3. 11½ to 12½. 1*st Term*, English Literature. 2*nd*, Cicero. 3*rd*, Livy. 12½ to 1½. German. Sets 1 & 2. 4 to 5. 1*st Term*, Latin, unseen translation. 2*nd & 3rd* French. 5 to 6. Mathematics.	
Thursday	7 to 8. 1*st & 2nd Terms*, Horace. 3*rd*. Livy. 10 Repetition in Latin. Each boy says it and goes away. 11 to 12. 1*st Term*, French. 2*nd & 3rd*, English Literature. 12½ to 1½. Mathematics.	Latin prose.
Friday	7 to 8. Mathematics. 10½ to 11½. English History. 11½ to 12½. 1*st Term*, *Horace. 2*nd*,* Cicero. 3*rd*,* Livy. 2½ to 3½. French. 3½ to 5. Geometrical Drawing. 5 to 6. Mathematics.	—
Saturday	7 to 8.* 1*st & 2nd Terms*, Horace. 3*rd*, *Livy. 10½ to 11½. German. Set 1. 11½ to 12½. Mathematics. 12½ to 1½. German. Sets 2 & 3.	—

UPPER MIDDLE FORM, DIV. I., 22 BOYS.

Lessons and Compositions during the Year 1862.

CLASSICAL DIVISION.

	Lessons.	Compositions.
Sunday	3¾ to 4¾. Old Testament; six or seven chapters.	—
Monday	7 to 8. Greek Testament. 9½ to 11½. Mathematics of middle school, in sets of one hour each, and drawing set 4. 12½ to 1½. Latin composition. 4 to 5. Homer, Æschylus. 5 to 6. Latin Grammar or exercise.	*Monday.* A minimum of 8 original Latin verses. (Two first terms from Moberly's Latin Verse.)
Tuesday	7 to 8. Homer, Æschylus, and Repetition. 10 11. Greek Grammar. 11 12. or 2½ to 3½. French, in sets. 12½ to 1½. Composition in school.	*Tuesday in school.* Greek iambics or Latin verse.
Wednesday	7 to 8. Sallust and Repetition. 9½ to 10½. or 11½ to 12½. German. 12½ to 1½. Drawing. 3 to 5. Mathematics in sets. 5 to 6. Virgil.	Greek iambics.
Thursday	7 to 8. Homer, Æschylus, and Greek Grammar, 1 to 11. Virgil. 12 to 1½. Composition in school.	In school, Latin prose, usually a piece for re-translation, or detached sentences.
Friday	7 to 8. Æschylus and Greek Gram. 9½ to 1½. Middle School sets of one hour each in Mathematics, French, and Drawing. 2½ to 3½. 3 to 5. Mathematics in sets. 5 to 6. Latin Grammar and exercises.	Latin prose.
Saturday	7 to 8. Sallust or Ovid, and Latin Grammar or repetition. 9½ to 10½. or 11½ to 12½. German. 10½ to 11½. Paper in work of week and grammar questions. 12½ to 1½. History.

UPPER MIDDLE FORM, DIV. II., 33 BOYS.

Lessons and Compositions during the Term ended December 23, 1862.

CLASSICAL AND MATHEMATICAL DIVISIONS.

	Lessons.	Compositions.
Sunday	3¾ to 4¾. The Epistle for the day by heart. Chapters of Old Testament History.	—
Monday	7 to 8. New Testament. (Greek and Latin.) 9½ to 11½. Mathematics in sets for one hour. Drawing for one set. Latin exercise corrected for Mathematical Division. 11½ to 12½. Latin exercise corrected for Classical Division. Latin verses.* 12½ to 1½. Chemistry for Mathematical Division. 2½ to 3½. Mathematics for Mathematical Division. 4 to 5. Greek Grammar. 5 to 6. Virgil.	An exercise of 12 lines from Ellis. *Six lines from Rapier's Latin elegacies.
Tuesday	7 to 8. Analecta Græca Minora. Mathematics for Math. Division. 11 to 12. or 2½ to 3½. French, in sets. 12 to 1½. Latin verses.* 12 to 1½. Mathematics for Math. Div.	Twelve lines from Rapier's LatinElegacies. *Twelve lines from Rapier.
Wednesday	7 to 8. Ovid. 9½ to 10½. or 11½ to 12½. German in hour sets. 10½ to 11½. Drawing. 12½ to 1½. Roman History. 3 to 5. Mathematics in hour sets. 4 to 5. (Extra) Modern languages for Mathematical Division. 5 to 6. Ovid by heart. Virgil translated.	Any boy is at liberty to show up 24 extra lines.

WELLINGTON COLLEGE.] TABLE D.—*continued.*

	Lessons.	Compositions.
Thursday	7 to 8. Analecta. Mathematics. 10¼ to 11¼. Latin grammar and Ovid by heart. 12 to 1¼. Ellis' Latin Exercises.* Exercises of the preceding week read from the book.	An exercise of 12 lines from Ellis. * Another exercise of the same length.
Friday	7 to 8. Greek Grammar. 9¼ to 11¼. Mathematics, French and Drawing in hour sets. 9¼ to 10¼. English Grammar and composition for Math. Div. 11¼ to 1¼. French, in hour sets. 10¼ to 11¼, 11¼ to 12¼, or 2¼ to 3¼. Drawing in sets. 3 to 5. Mathematics, in sets. 3½ to 5. Mechanical drawing for Mathematical Division. 5 to 6. Virgil.	An English essay written by the Mathematical Division (and read in school).
Saturday	7 to 8. Ovid. 9¼ to 10¼, or 11¼ to 12¼. German, in sets. 10¼ to 11¼. Analecta. Mathematics. 12¼ to 1¼. Roman History, or repetition of classical lessons.

LOWER MIDDLE FORM, 1ST DIV., 33 BOYS.

No. 1.—Lessons and Compositions during the Year ending Christmas 1862.

	Lessons.	Compositions.
Sunday	3¾ to 4¾. Bible History.	One or two copies of Latin prose from Ellis' exercises, of about 16 lines. Four copies of Latin verse from Walford's Verse Book, of not less than six verses each copy. Two of these done in school. Two shown up on Monday and Friday. A map shown up every other week on Wednesdays.
Monday	7 to 8. Epistle or Gospel by heart. 9¼ to 10¼. Mathematics, sets. 10¼ to 11¼. Mathematics. sets. Drawing, set 4. 11¼ to 12¼. Analecta Græca (prepared in school). 12¾ to 1¼. Drawing. 4 to 5. Virgil. 5¼ to 6. Greek Grammar (prepared in school).	
Tuesday	7 to 8. Ovid. 11 to 12. French sets. 12 to 1¾. Latin verse composition. 2¾ to 3¾. French sets.	
Wednesday	7 to 8. Analecta. 9¼ to 10¼. German sets. 11¼ to 12¼. German sets. 12¼ to 1¼. Cæsar (latterly Virgil) prepared in school. 5¼ to 6. Latin Grammar.	
Thursday	7 to 8. Ovid. 10 to 11. History. 12 to 1¾. Latin verse composition. Half Holiday.	
Friday	7 to 8. Analecta. 9¼ to 10¼. Mathematics, Drawing, 10¼ to 11¼. and French of Middle 11¼ to 12¼. School sets each for one 12¼ to 1¼. hour (except Drawing, 2¼ to 3¼. set 4, see Monday). 3 to 4. Mathematics. 4 to 5. Mathematics. 5¼ to 6. Greek Grammar (prepared in school).	——
Saturday	7 to 8. Virgil. 9¼ to 10¼. German sets. 10¼ to 11¼. History (or Latin prose.) 11¼ to 12¼. German sets. 12¼ to 1¼. Examination in work done during the week. (Alternately Greek and Latin.) Half Holiday.	——

All lessons are learnt in school; three-quarters of an hour each morning, and one and a quarter hours each evening are spent in "Preparation School." Average of present form is 12 years. No classical standard is required for admission till after Christmas 1862.

CHELTENHAM.

STATEMENT.

CHELTENHAM COLLEGE.

Letter from the Rev. Alfred Barry, B.D., Principal.

Cheltenham College,
11th March 1863.

My Lords and Gentlemen,

In attempting to comply with the request with which I have been honoured, I feel that I labour under some peculiar difficulties.

I am desired to add to our returns of class work and class arrangements a letter referring to, and remarking upon, the chief principles of our system. I entered upon my present office only about nine months ago, after a change in the whole system of government, which swept away most of its peculiarities, and assimilated it to the system of most Public Schools, while it left untouched the scheme of instruction and internal arrangement, mainly due to my distinguished predecessor, the Rev. W. Dobson, and (in the Modern Department) to the Rev. T. A. Southwood, who has so long and so successfully presided over it. That scheme I have preserved in most of its main features. In referring to it, as I must do, in the remarks which I have the honour of laying before you, I would beg to say that I wish neither to adopt it as my own in every point, nor to criticise it, but simply to speak of it and of its effects, as matters of fact. For I cannot but feel, that my short period of connexion with the college allows me to do very little more than this.

I conceive that I shall best perform the task entrusted to me by remarking only upon those points in the system which are different from the arrangements of most great Public Schools.

(A.) Division of the College.

(A.) The college is at present divided into three departments.

(1.) The Classical Department, the scheme of subjects in which is, generally speaking, that of the ordinary "Public School" teaching.

(2.) The Modern (or military and civil) Department, in which the main study is that of mathematics, and in which, while Latin is kept up to a certain extent, Greek is entirely omitted, Natural science introduced, and greater stress laid on the study of modern languages.

(3.) The Juvenile Department (opened at Christmas last) (including boys between 8 and 13, (although boys, if sufficiently advanced may pass from it at the age of 11,) and intended to serve as a preparation both for the Classical and Modern Departments.

The numbers at present are (Feb. 1863):—

In the Classical Department	- - -	286
„ Modern „	- - -	276
„ Juvenile „	- - -	65
	Total	627

Of these 627 boys, 405 are boarders, residing in separate boarding houses, all of which (with one exception) are under the charge of assistant masters of the College; and 222 are day-boys, residing either with their parents or with some one who stands to them strictly *in loco parentis*. The existence of this large class of day-boys is almost peculiar to Cheltenham College, and has probably exercised considerable influence, both positive and negative, in the formation of its system.

(B.) The Boarding System.

(B.) The expenses of the larger boarding houses, containing from 30 to 50 boys, are fixed by rule at nearly 45*l.* per annum; which with the tuition fee and price of a nomination makes the whole expense about 71*l.* in the higher and about 67*l.* in the lower classes. I may perhaps be allowed to express my own decided opinion (confirmed by many of high authority), that the boarding charges are too low, considering the class and requirements of our boys, and that it is not improbable that they may have to be increased. Each of these boarding houses is under the charge of a master, who engages for himself an assistant master (not necessarily a master of the college), there having been as yet nothing like a prefectorial system established, either in the college itself or in the boarding houses.

To this notice of the larger houses, I should add, that a few of the masters are allowed to take a small number of boys into their houses, who are treated much as private pupils, and received at a much higher rate. The terms in such "private boarding houses" vary from 80*l.* to 120*l.* per annum. The number of boys at present in such houses is small, not exceeding 30. In my opinion they are only useful as providing for exceptional cases, in which boys for their age, health, degree of knowledge, or character, are not fit for the larger houses.

Our system of boarding is therefore the domestic, as distinguished from the collective system which prevails at Marlborough and Wellington Colleges; and, in its points of advantage and disadvantage, it differs little from those which must have already come before your notice at Eton, Harrow, and Rugby, except that it is far less expensive than any of them.

(C.) Scheme of Instruction (General).

(C.) With regard to the general system of instruction, three points seem to me to deserve notice.

(1.) A large amount of our work is done in school. The hours on a full school day are six, on the two half holidays three. In consequence much of the work, especially in the lower classes, is prepared, as well as said, in school; and the evening work (averaging about two hours) consists chiefly of composition, exercises, and lessons committed, either in word or in substance, to memory, and requires in most cases mere supervision, to ensure its being carefully and thoroughly done. Large amount of work done in school.

One effect of this is that, for the greater part of his work, each boy has to look only to the master of his class, and to carry on his study under his supervision. I think that this system answers thoroughly well with the younger boys. In the higher classes it secures a large amount of work, and makes systematic idleness rare and difficult; its danger is that it may perhaps give too much support, and so lead to the danger of a reaction towards an idle or desultory temper, when on their leaving the college that support is suddenly withdrawn.

Another effect is that private tuition is confined within very narrow bounds. It is regarded by the college as an exceptional arrangement. It is supposed to be desirable, in order to remedy ignorance of special subjects, which would otherwise lead to an undesirable classification of a boy, in order to supply a knowledge of subjects which a boy's future career may chance to require, and which do not form part of our college teaching, or in order to prepare for examinations shortly to be undergone at the universities or elsewhere. Even for this preparation it will be seen, by reference to Table D. (First class), that some provision is made in the class arrangements. As a matter of fact, the use of such private tuition is comparatively rare, though it is more frequent in the Modern than in the Classical Department, on account of the greater multiplicity of subjects, and the more frequent occurrence of examinations at Woolwich, Sandhurst, &c. So far as my present experience has gone, I should say that it ought to be but rarely necessary, and that, if it were generally resorted to, the effect would be on the whole more injurious than advantageous.

(2.) The number of Masters, in proportion to the number of the boys instructed is large. Large number of assistant masters.

The number of class-masters at present (including the Principal and Vice-Principal, who take the first two classes in the Classical Department, and the Head Master and Vice-Master, who take the first classes in the Modern Department) is:—

In the Classical Department	- - -	11
„ Modern „	- - -	11
„ Juvenile „	- - -	3
		25

It will be seen, that the average number of boys taught by each master is about 25. In point of fact, it is so arranged that the highest and lowest classes average about 20, and the other classes of the school about 30, all classes below the first three or four being divided into two parts.

This limitation of numbers in a class is mainly imposed by the fact (above alluded to) that the exercises and composition of each class are in the hands of the class master. In a large school, where the classification is naturally most perfect, and where it is therefore possible to secure a tolerably uniform standard of knowledge and proficiency in each class, it might be quite possible to take larger classes without injury to the regular class work. But I do not think, that a master can well look over the exercises of a larger number of boys with the care and thoroughness, due to that which is one of the most important

parts of the work. In the first (highest) class, including 32 boys, the composition is, in the first instance, looked over by a composition master, and the corrected exercises are then re-written and submitted to the Principal and Vice-Principal respectively.

Additional masters.

Besides the class masters, there are in the Classical Department—

Composition and Sanscrit Master	1
Mathematical and Arithmetical Masters	5
Foreign Language Masters	2
	8

In the Modern Department—

Natural Science Master	1
Foreign Language Masters	4
Drawing Masters*	3
	8

The whole number of masters is therefore 41.

Theological tutors.

Besides these masters two theological tutors belong to the staff of the college.

Their appointment was originally due to a peculiar arrangement, by which it was intended that the religious teaching should be vested, not in the hands of the masters, but in those of two theological tutors (appointed independently of the Principal), to whom each class should go for about an hour a week for religious instruction. The direction of the chapel services, and of the preparation for confirmation, was placed in the hands of one of these gentlemen, who was appointed "Chaplain;" and it was understood that they were responsible to the Directors alone. This system has now been entirely changed; the whole direction of the religious instruction and services having been given up to the Principal, and a certain portion of the religious instruction being in all cases given by each class master. But each class still goes for an hour in each week to one of the theological tutors, and arrangements are made so that the two parts of the religious instruction may harmonize with each other.

I have therefore 42 colleagues engaged in the instruction of our 627 boys.

Regular and frequent examination of the whole school.

(3.) We have regular and frequent examinations of the school in all subjects included in the regular work of the classes.

The arrangement at present made in the Classical Department is, that at the commencement of the half-year a certain scheme of work is made out by the Principal, with the assistance of the class masters, so arranged as to form a regular system of Scripture reading, of Latin and Greek grammar and construing, history, and geography. That scheme of work is made the basis of examination at the close of each quarter by the Principal (with the assistance of the Vice-Principal). At the time of the examination reports of the conduct and work of each boy are presented to him, which are then added to and countersigned by himself, and forwarded to the boy's parents; marks are given for the examination, and the boys' places are determined by the combined result of the class marks and marks for examination. The results are recorded in the Principal's register, and communicated by him, if necessary, to the master of each class. The examination is conducted partly *vivâ voce*, partly on paper (exercises and occasionally written translation being done in school for examination by each class). The former part generally occupies about three hours for each class. It is, of course, entirely independent of the examination by examiners from the University, held every Midsummer and Christmas.†

A process nearly similar is carried out in the Modern Department by the Head Master (with the assistance of the Vice-master, who presides over the Latin and English studies of the Department). It is understood, of course, that the Principal may at any time examine, if he will, any part of the work of the Modern Department.

The effectiveness of this examination is the mainspring of the whole school-work. It brings the Head in contact with every master and every class, and enables him to know what each boy in the college is doing, morally as well as intellectually. It is the only security for anything like unity of system, and the only safeguard against neglect, inaccuracy, and eccentricity of teaching. It is practically found to be the best preventive of systematic idleness on the part of the boys.

The examination by strangers may afford a test of the general efficiency of a school, but it cannot be sufficiently searching to find out the details of defect or excellence, on which that general standard of efficiency depends; nor can it be conducted with the assistance of an intimate knowledge both of masters and boys. The examination, therefore, of the school, regularly and not unfrequently, is one of the most important duties of a Head Master.

Cheltenham. Statement.

(D.) I.—The Classical Department.

I now pass from the general principles of instruction to points concerning each department separately.

Parallelism of class-divisions.

(1.) In the Classical Department the principle of classification depends upon the degree of a boy's knowledge of Latin and Greek. The only remarkable peculiarity of arrangement is one introduced by the Rev. W. Dobson. The whole department is divided into ten classes; the first two classes being divided each into two consecutive divisions, and including the first seventy-two boys. Below these classes each class is divided into two parallel divisions; the two divisions reading the same subjects, and being supposed to be exactly equal in knowledge and ability. Each (numbering about fifteen boys) is put into the hands of a master, who also takes a corresponding division of the class immediately below. The two divisions are said to belong to the "Principal's and Vice-Principal's side," the distinction, however, being purely nominal. The whole department is, therefore, arranged thus:—

Class	I. *a.*				16 boys.
,,	I. *b.*				16 ,,
,,	II. *a.*				20 ,,
,,	II. *b.*				20 ,,
Class	III. P.	30 boys.	Class	III. V.P.	30 boys.
,,	IV. P.		,,	IV. V.P.	
,,	V. P.	30 boys.	,,	V. V.P.	30 boys.
,,	VI. P.		,,	VI. V.P.	
,,	VII. P.	30 boys.	,,	VII. V.P.	30 boys.
,,	VIII. P.		,,	VIII. V.P.	
,,	IX. P.	30 boys.	,,	IX. V.P.	30 boys.
,,	X. P.		,,	X. V.P.	

The classes included within brackets are under the charge of the same master.

This system of parallelism was originally intended to apply also to the upper classes; but it was soon disused with regard to them.

It was originally instituted in the idea of keeping the classes small, and securing sufficiently rapid promotion. I am inclined to think that it has no great effect in these respects. If it were done away with, and if each class were placed under one master, the number of boys under him would be the same, the similarity of attainment being of course greater; and the class might be worked in two removes in those subjects on which it was found necessary so to arrange them. The boys promoted would be precisely the same as now, the only difference being, that they would come from under one master, instead of coming from under two.

Its advantages and disadvantages appear to me to be these—

Its advantages.

The advantages are that—

(*a*) A boy remains under the same master for a longer time. (If promotion for each class be made each half-year, a boy would under the other system be under each master for a half-year, whereas he is now under him for a year.)

(*b*) A boy can be quietly moved from one side to the other without any great loss, if he gets on ill with the master under whom he has been placed.

(*c*) The Principal is enabled to see on examination whether the failure of a class depends on any fault of teaching or discipline. If the class on one side is constantly inferior to the corresponding class on the other, the raw material being much the same, the conclusion is obvious.

Its disadvantages.

As for the disadvantages,

(*a*) The great and serious disadvantage is the practical impossibility of securing strict equality of excellence in the masters of parallel divisions, and therefore real equality of progress in the boys. As far as my experience goes, I may say that I have never found anything like this equality. The consequence is, that if two boys are promoted into the second form, after passing up, the one on the Principal's the other on the Vice-Principal's side, it is likely, that the one will have been far better taught than the other in some of the parallel divisions, through which they have passed.

(*b*) The second is the tendency to encourage invidious comparisons, on the part of the boys, of the masters of parallel divisions in respect of knowledge, teaching and strictness of discipline. That this is no imaginary evil has been found by experience.

* Drawing is a regular part of the work in the Modern Department. In the Classical Department the study of it is optional, and pursued to a great extent out of school hours.

† The classical examination is at Midsummer, and the mathematical at Christmas, in the Classical Department. In the modern school, the mathematical examination is conducted at Midsummer, and the extra examinations at Christmas.

CHELTENHAM. STATEMENT.

I do not at present feel able to determine to which side the preponderance belongs.

(2.) The next point of importance is the mathematical arrangement of this Department.

Its mathematical arrangement.

The classification being made according to classical knowledge, it is evident that each class will include boys of very different advancement in mathematics and arithmetic. It has never yet been the practice to classify the boys for mathematics on a system independent of the classical arrangement. This irregularity is, of course, a serious hindrance to the mathematical advancement of the boys. It is practically remedied, with respect to all except the last four classes, by the subdivision of each class for mathematical study into three divisions, which are placed under the three mathematical masters, each division numbering on the average about 12 boys. In this way it is generally contrived, that a boy shall not be kept back in mathematics on account of backwardness in classics, and, in order to secure proper competition, it is now settled that, although boys of different classes cannot be taught mathematics together, they may nevertheless be examined together, and the subjects chosen for reading are regulated accordingly.

The same thing is done to some extent but less perfectly with regard to the two arithmetical masters, who have charge of the lower classes. It will be observed by the class returns that a considerable portion of time is given to mathematics; and, in point of fact, the standard of attainment is good. But I do not think that the contrivance referred to works so thoroughly well as to correct the whole evil, and I believe that an independent mathematical arrangement would be preferable, and ought not (within certain limits) to be impossible.

The study of modern languages (French and German).

(3.) The last point to be noticed in relation to this Department is the arrangement made in reference to the teaching of French and German. The same difficulty meets us here also as to classification. The classes cannot go to their French lessons except in their classical arrangement. The evil is not so great as in the case of mathematics, because, as a boy's place in the general classification depends on his knowledge of language, that same knowledge will generally enable him to keep up with the rest of his class in French or German (exceptional cases being soon provided for by a few private lessons). So far as it exists, it is met in much the same way as in the mathematical work.

A greater difficulty is the short time which can be given to the study. We find it impossible to give more than two school hours per week to modern languages, besides time for preparation in the evening, excepting for boys who purpose to go in for the Indian Civil Service appointments, and for whom special arrangements are made. Judging it utterly impossible under these circumstances to allow the simultaneous study both of French and German, we have resolved to fix a certain point in the school, up to which French alone is to be learnt; when a boy reaches that point, his parents make their choice, whether he shall continue French or begin German, and, that choice, once made, must as a rule be adhered to. The Modern Department is of course open to those, for whom this amount of study of modern languages is insufficient.

The greatest difficulty of all, however, is the maintenance of a proper standard of work and discipline in the French and German classes. The boys look upon the study as merely accessory; the masters, if foreigners, are seldom sufficiently acquainted with English methods of education to make their own knowledge thoroughly effective, and are seldom able to secure the attention and good order of their classes. I cannot but be of opinion that, if a school can include one Frenchman and one German on its staff, for the purpose of correcting pronunciation and looking over the higher kinds of composition, and can then entrust the greater part of the French and German teaching to Englishmen who have had an university education, and who, having lived abroad, are thoroughly versed in the foreign language which they undertake to teach, the work will be far more effectively done than by any other arrangement.

In order to secure the systematic arrangement of the French and German teaching, and to give importance to the study in the eyes of the boys, we have recently laid down a rule, that each master shall take in class a certain portion of French or German grammar (as a kind of repetition almost said "by heart") so as to leave the French and German masters more time for translation and composition; and that the marks of the French and German shall be added to those of the regular class work, so as to influence a boy's position in his class and in the school.

We do not hope by this to secure any high standard of French and German scholarship; but we trust to make the boy's knowledge, as far as it goes, sufficiently systematic and accurate to be a good basis for future study.

II. The Modern Department.

Its nature and object.

II. The Modern (or civil and military) Department. The existence of this Department, with numbers nearly co-ordinate with those of the Classical Department, is perhaps the most characteristic feature of the system of Cheltenham College. The reading of the higher classes is mainly guided by the Woolwich and Sandhurst examinations, (which are to this Department what the University course is to a high classical school); and of course that which rules the highest classes must more or less directly affect the studies of the whole Department. It should be observed, that although classes exist called the "Direct Line" and "Sandhurst classes," these do not by any means contain the whole of the boys who are desiring to obtain commissions, either directly or through Sandhurst. Such boys can, and most frequently do, pass at once to their examinations from the regular classes. The special classes above alluded to are designed for those who, having this desire, are yet, from their standard of age and knowledge, unfit to continue in the regular classes, and need special and almost private tuition. In the same way it may be observed that, although the "Civil class" was instituted with a view to those who were entering commercial life, or intending to compete for appointments in Government offices, still many pass from the College in these directions without entering the "Civil class" at all. It may therefore be said generally, that this Department is intended for boys entering the army, adopting the engineering or other scientific professions, or destined for commercial life.

I may add that, in the competition examinations for Woolwich and Sandhurst, it has achieved decided and unusual success, and that its pupils have afterwards continued to attain distinctions at Woolwich, Addiscombe, and Sandhurst. These are its only external tests; perhaps a more valuable one still may be deduced from the fact of its continued numbers and popularity, and from its having attained a complete equality in rank with the Classical Department.

Reference to the letter of the Rev. T. A. Southwood.

With regard to the details of its arrangement, I would beg to refer to a letter from Mr. Southwood which is subjoined. The Department has been created by him; no one therefore can give more valuable information as to its working.

But there are one or two general questions which may naturally be referred to here.

Its educational value.

(1.) The first and most important is that of its educational effect on the minds of the boys. The principle of its classification is mathematical; and its standard of mathematics is high. It is reasonable therefore to expect from it that cultivation of the reasoning powers, for which mathematical study is calculated. Natural science has in it fair scope, and is efficiently worked. To it we look for the cultivation of the observing and inductive faculties. The study of language is, of course, carried out under great difficulty. In the first place the mathematical classification brings together, in one class and under one teaching, boys of very different proficiency and power for language. In the next place, in spite of all possible pains, it is very difficult to ensure in the lower classes a thorough attention to their Latin. The boys look upon it as an accessory subject, knowing that it will have to be dropped in the upper classes, and will not (in all probability) affect their final examinations. It is perhaps hardly to be expected, that boys should look further forward, or consider the ground on which the real value of their Latin study depends. In the third place the study of French and German is beset with the difficulties already noticed. I am inclined to think that on these languages, and on English, with the substratum of Latin already laid, the real study of language in this Department must rest. I believe that these ought to be sufficient. In the English work of the higher classes much seems to be attained. But the difficulty (already alluded to) of securing such results in the foreign languages is here strongly felt. It is not, however, in my opinion an insuperable difficulty; but it renders even more necessary than ever some such arrangement to secure the systematic and scientific teaching of these languages, as has already been referred to.

So far then as can be judged from the nature of the system and (I may add) from the character of the boys who have passed through it, I think it may be said that the experiment has been fairly tried, with such a measure of success

as to justify much confidence in its value. The existence of the modern department is also a safeguard to the classical system, as giving scope for those boys who are unfit for the latter, and affording an opportunity of introducing those extra studies which are often desired by boys or by parents, and which it is literally impossible to introduce without overburdening the boys, or interfering with the solidity of their work, if classics and mathematics are to be thoroughly studied. On this subject I should venture to endorse (so far as my knowledge extends) the statement derived by Mr. Southwood from long experience. I cannot say that I have the same full confidence in the effect of the system, as in the older classical system, modified as it is here by a strong and sufficient admixture of mathematics and of English study. I observe that, in the Woolwich and other competitive examinations, a reaction is taking place towards that older system, which I believe to represent fairly a reaction in the general estimate of its value. At present I am sure that boys could be sent in for Woolwich with almost equal advantage from either department of the College. But I still think, that the existence of our Modern Department gives far greater perfection to the system of education, and far better scope for the various ability and knowledge of our boys than could be possible, if only the classical system prevailed. I feel sure that it gives a true education, and not mere instruction in various subjects.

The effect of its existence on the unity of the College.

(2.) There is another important question suggested by this division of a school into various departments, especially when, as in this College, the two senior departments are nearly co-ordinate in numbers and in standing.

It is the question, how far there may be danger to the unity of the school, a danger arising partly from the very fact of the division of the boys, and partly from the less direct contact of the boys of the Modern Department with the Principal, and their consequent tendency to look up to their own Head Master instead of to him. My experience is but short, but, so far as it goes, I should say that the danger is no imaginary one, and that it is likely to become more visible in its effects, if anything of prefectorial authority is introduced into the College. But I think that it is quite possible to guard against it thoroughly, if the Principal is able and willing to superintend, either by examination or by direct teaching, some part of the work of the first class of the Modern Department, if it is well known that the scheme of work is regulated by him, and that all masters are ultimately responsible to him, if all questions of serious discipline are referred to him, and if in the religious influence of the Chapel services the preparation of boys for confirmation and the like, he is distinctly the representative of the whole College. If he is well aware of the danger, both as regards appearances in the eyes of the boys and as regards the tendency in himself to take warmer interest in the boys with whom he is more closely in contact, then (I think) it may be removed, at any rate so far, that it cannot be considered by any means to counterbalance the plain advantage of a more perfect classification.

III. The Juvenile Department.

The Juvenile Department is but recently established, and its numbers accordingly are below the standard, to which we expect them hereafter to attain. It is considered that if the College is full (650 boys) about 100 or 120 should be in the Juvenile Department. The age is fixed from eight to eleven, but boys may remain in it, if necessary, till thirteen. If, at the age of thirteen, they are unfit for the lower classes of the senior departments, the probability will be that they are hardly fit for a public school at all.

They have school rooms of their own, they are to have juvenile boarding houses as soon as possible, and a certain part of the College playground reserved for their use. A Head Master is appointed for the Juvenile Department, responsible only to the Principal and having the general control and supervision of the masters under him.

Its objects.

The main object, which we had in view, was the possibility of taking boys at an early age, before they have lost, by imperfect or erroneous grounding, the time which is valuable beyond all others. More especially we desire to see, that they are well taught in elementary English subjects and in Latin and French grammar. We have as yet found it impossible, without special arrangements, to take boys with advantage before they are ten or eleven years old. But very many come at that age, either wholly ignorant, or so prepared that they have to unlearn much of what they have already learnt. The time thus lost can hardly ever be regained. The classification (to which such defect leads) must be defective, both in its moral and its intellectual effects. But if we take boys as early as eight years old, it is clear that they require a different system of teaching and discipline, involving far more supervision and direct individual assistance than is needed for boys of twelve and upwards. It has always been my own feeling that, next to the highest classes of a school, the lowest are the most important. On the conduct of these lowest classes depend in great measure the first impressions, intellectual and moral, of the school upon the boy, the growth of good habits of work and discipline, and the origination of the tone which will hereafter distinguish his whole school career.

It is a great mistake to entrust them to the least able and least experienced hands, with only that general supervision and examination which the Head Master of a large public school can give. They should be in frequent and daily contact with a man who has made it his business to train and guide little boys, and who is capable of giving them that first right direction which is invaluable. This is the office of the Head Master of the Juvenile Department, and upon the tone, which he is able to inspire in the boys and masters under him, very much of the welfare of the College must depend.

We have also had reason to think that the power of keeping the younger boys to themselves, in the boarding house and in the playground is highly desirable. In the boarding houses there can be (I think) no question of the advantages, moral and physical, of having to deal with boys of nearly the same age in respect of all domestic arrangements. In the playground I am not by any means of opinion, that intercourse between the elder and younger boys should be cut off; but I think it of great consequence that it should be capable of regulation, and especially that the little boys should have sufficient ground for games, &c. of their own.

It is for these reasons that the juvenile school was established. We have as yet no experience to show how far they can be attained.

I have thus endeavoured to sketch out the peculiarities of our system of teaching, omitting the features in which it resembles that of most other large schools. I have only to add that if information on any other points should be considered desirable, I shall feel still further honoured by being called upon to supply it.

I have, &c.

Alfred Barry, B.D.,
Principal.

Explanatory Statement by the Rev. Thomas A. Southwood respecting the Modern Department.

I fear the form of return (C), furnished by the Public Schools Commission, was but ill-adapted for the information which the Modern Department of the Cheltenham College was invited to give. I will endeavour to supplement it with a few words of explanation, in the hope that it may make the reports of the masters intelligible and clear.

Large number of Subjects taught in the Modern Department.

The number of subjects included in the course of instruction will appear unusually large, and, were they all taught at the same time, would completely destroy any hope of educating the boys to any good purpose; but this is carefully avoided by grounding the lower classes in Latin, English, History, and elementary mathematics, and gradually introducing a fresh subject as the boys are able to bear it.

The whole course comprises Mathematics, Latin, English, history, geography, French, German, Hindustani, English language and literature, physical science, drawing, fortification and surveying. There are 13 classes, but as some of them contain two, three, and even four divisions, they are considered for all practical purposes as 19. They are:—

I.	with	5	boys
II. A., II. B.	„	24	„
III. A., III. B.	„	26	„
III. C., III. D.	„	26	„
Sandhurst and Direct Commissions	„	28	„
Civil., IV. C.	„	28	„
IV. A., IV. B.	„	30	„
V., VI.	„	32	„
VII., VIII.	„	33	„
IX., X.	„	34	„

CHELTENHAM. STATEMENT.

The Head Master takes the first class, and a class master each bracket of classes.

There are therefore ten class masters including the Head Master, with an average of 27 boys each. There is also the Vice-master, who takes the English literature of the first and second classes, and instructs those boys in them who have made considerable progress in Latin and Greek; he also assists the Head Master in the periodical examinations of the classes during the half year. There is one Hindustani master, one master for physical science, two German, two French, and three drawing masters. The first class is the highest, the tenth the lowest in rank.

The Arrangement of the Subjects.

The subjects of the three lowest classes (X. IX., VIII.) are Latin, English, History, elementary Mathematics, French, and Drawing, In the seventh German or Hindustani is added, and with this addition the boys continue their study until reaching the third class.

On reaching the third class, geometrical drawing and natural science are added; English literature is commenced in the second class, and those who may be intended for the army there begin to learn fortification.

On entering the first class the experimental sciences are taught; also military sketching and surveying, theoretically and practically, to those intended for the army. Thus the subjects are gradually introduced, as the boys acquire proficiency in the subjects which have previously occupied their attention; none of these however are wholly dropped, but are kept up and strengthened by revision and examination. In this way the whole range of subjects can be completed without confusion, or unduly taxing the boys' time.

Special Classes.

The Sandhurst and Direct Commissions classes are special classes for those candidates for Sandhurst or the line, who, being too backward for the upper regular classes, require much individual teaching. The civil class is another special class; it contains those boys who are intended for the Government offices or a commercial line of life. In this class besides arithmetic, history, geography, Latin, and modern languages, especial attention is paid to English composition, précis and abstract making. I may here mention that in the first and second classes the course of study is well adapted to several classes of boys—to those whose object is Woolwich or Sandhurst, the Civil Engineer Service of India, and Civil engineering generally, and to others who have no profession in view, but who seek to obtain a sound education by means of mathematics, English language and literature, modern languages, and physical science. This is the kind of education which the Modern Department furnishes, and twenty years' experience has proved that a more comprehensive education can be given by the union of two such schools as the classical and modern, than by the individual action of either, that they can work harmoniously and also successfully, both for the public requirements and for the college treasury.

Examination of the Classes.

All the classes are examined by the Head Master (assisted by the Vice-master) twice during the half year. Two classes are examined in each week, notice being given to the class masters the day preceding the examination.

The subjects examined are those taught by the class masters, mathematics, Latin, history, and geography. The examination is partly by papers, partly *vivâ voce*. and includes both new and old work. The marks obtained in these examinations are added to the marks of the class master, and of the masters for extra subjects, the total determining the place of the boys in order of merit, which appears in the school report forwarded to the parents twice each half year. The results of these examinations are entered in a register kept by the Head Master, and any boy who distinguishes himself has a special notice of such distinction entered in the register, and the school report furnished to his friends.

The subjects taught by the extra masters, such as French, German, Hindustani, drawing, and physical science, are examined by gentlemen unconnected with the school, appointed by the Council of the College; they take place just before the Christmas vacation. All the classes are examined in the class subjects by examiners appointed by the Council during the last fortnight of the summer half year, the result of which is furnished to the Council in a Report drawn up by the examiners.

It has been seen that each class master has two classes, or two divisions corresponding to two classes, and it is so arranged, that while one class or division is under instruction from the class master the other class or division is either preparing a lesson for him or absent with one of the extra masters. The class masters are actually engaged in oral teaching from 25 to 27 hours of the week consisting of 30 school hours; and of the remaining hours the greater portion is occupied in examining exercises or in preparing examination papers to test some lesson prepared by the boys. In the III. C., III. D., IV. A., IV. B., IV. C., IV. D., V., VI., VII., VIII., IX., X. classes the relative time given in school to the various subjects is,—Latin, five hours; mathematics, eight hours; modern languages, from four to six hours; drawing two hours; English history, three hours; Scripture lessons, two hours; the remaining hours to preparation either for the class master or for the extra masters. In the upper classes the relative time given is,—mathematics, from eight to ten hours; modern languages, five to seven hours; drawing, four to five hours; English literature, four to five hours; science, three hours. When Latin and Greek are studied, science and some other subjects are wholly or partly discontinued. The same takes place with regard to fortification and surveying. The evening preparation at the boarding houses occupies from one and a half to three hours, and the subjects are those taught and examined by the class master on the following day.

THOS. A. SOUTHWOOD.

TABLE C.

CHELTENHAM COLLEGE.
Classical School.

TABLE C. - - - - - -

Return of the Work done by the several Forms or Divisions

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays, 1862.	4. Method of Hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
First Class, A. and B. Divisions, 30 Boys.*	Novum Testamentum, Gr., Valpy, Loyd, and others; Homer (*Baumlein's text*); Euripides (*Porson*); Plato, Gorgias (*Stallbaum*); Sophocles, Ajax (*Winder*); Herodotus (*Teubner's Series*); Aristophanes, Equites (*Holden*); *Vaughan's* Epistle to the Romans; Aristotle, de Poetica (*Bekker*); Demosthenes, Olynthiacs (*Wilkins'*); Virgil (*Oxford Text*); Horace (*Oxford Text*); Quintilian (*Bonnell*); Cicero, c. Verrem (*Teubner's Series*); Cicero, Epistolæ Selectæ, *ed. Müller*; Plautus (*Fleckeisen*); Terence (*Fleckeisen*); Catullus (*Rossbach*); Pindarus, Theocritus (*Teubner's Series*); Schiller's Works (*Stuttgard Edition*); Molière (*ed. Tauchnitz*); Todhunter's Algebra; Todhunter's Plane Trigonometry; Todhunter's Differential Calculus; Drew, Geometrical Conics; Parkinson, Elementary Dynamics and Statics; Colenso's Algebra; Colenso's Arithmetic; Potts' Euclid; Short's Church History; Litton's Introduction to the Scriptures.	Smith's Dictionary (Latin); Liddell and Scott's Lexicon; Edward VI. Latin Grammar; Wordsworth's Greek Grammar; Holden's Foliorum Centuriæ; Holden's Foliorum Silvula; Heimann's Materials for translation into German; Contanseau's Materials for translation into French.	Greek Testament, Gospel of St. Mark, Romans, Corinthians II.; Plato, Gorgias; Sophocles, Ajax; Euripides, Orestes; Aristophanes, Equites; Herodotus, III., 1–115 ch.; Demosthenes, Olynthiac Orations; Aristotle, Poetics; Homer, Iliad XX., Odyssey, XVII., XVIII.; Virgil, Æn., VIII., X.; Horace, Odes, Ars Poetica; Quintilian, part of Book X.; Cicero, c. Verrem, "de Signis," and some of his letters to Atticus, (5 or 6); Plautus, Trinummus; Terence, Heautontimorumenos; Livy, a few chapters; Catullus, Nuptiæ Pelei, &c., and some select odes; Pindar, Theocritus, a few select passages.	The boys are called up in no regular order, care being taken that each boy be called up to construe once a day. Marks are given for each construing lesson, including the answering of the questions passed round. The maximum of marks given is 10. The best scholars are called up most frequently; the weekly marks are added up, an average being allowed to those who have been called up less frequently. The first class classical (A and B) is arranged in three mathematical divisions.	Euripides, Orestes, 500 lines; Virgil, Æneid, one Book; Horace, Odes, about 30; Sophocles, Ajax, 500 lines. (20 lines a day is the usual amount of a repetition. The maximum of marks for such a repetition is 5.)	The books used in Divinity Lecture, viz., Short's Church History (Henry VIII. and Edward VI.), Litton's Introduction, Parts I. and II. The contemporary history and geography of the classical subjects (no book being specified).
Second Class, A. and B. Divisions, 40 Boys.†	Latin Grammar, Charterhouse or King Edward VI.; Greek Grammar (Wordsworth); Sophocles (*Oxford Text*); Æschylus (*Paley's edition*); Thucydides, (*Teubner's edition*); Livy (*Oxford Text*); Cicero (*a German edition*); Virgil (*Oxford Text*); Greek Testament (*Textus Receptus*); Holy Bible (*authorized translation*); Burton's Church History (*S. P. C. K. edition*). Arithmetic, Colenso; Algebra, Todhunter; Euclid, Potts; Conic Sections, Drew; Plane Trigonometry, Todhunter. French, Contanseau's Guide, Chrestomathie, by Vinet; German, Tiarks' German Grammar; German Reader (Chambers); Holden's Foliorum Silvula, Parts I. and II.; Holden's Foliorum Centuriæ.	Smith's Latin Dictionary; Liddell and Scott's Greek Lexicon; Smith's Classical Dictionary; Atlas (Butler's).	Sophocles, Electra; Æschylus, Eumenides; Thuycdides, Book IV. (chap. i.-xl.) Book VII.; Livy, Book IX.; Cicero, pro Milone; Virgil, Æneid, II. and V.; Greek Testament, St. Mark and St. Luke (I.-X.); Burton's Church History (from Ascension to conversion of Constantine); English Bible, Numbers and Jeremiah; Colenso's Arithmetic (entire); Algebra, to Binomial Theorem; Trigonometry, chaps. i.-vi., Logs. and Chap. xiii.; Euclid, Books I., II., III., VI., and XI.; French Exercise, 600 lines; Vinet's Chrestomathie, 65 pages; German, Tiark's Grammar, 400 lines; German Reader, 40 pages.	Lesson consists of about 50 lines, and lasts one hour, during which 8 or 10 boys construe; the lesson is gone over twice, mistakes passed down, places taken, difficult words parsed, constructions explained, and historical and geographical questions put. Every boy construes at least once in two lessons. Each boy is furnished with a note book to take notes. Occasionally the lesson is construed by the master.	Electra, about 320 lines; Eumenides, about 320 lines; Virgil, Æneid II., 400 lines, V., 400 lines. Occasionally a piece of 25 lines from Milton, or a chapter from Livy or Cicero is substituted.	Smith's Greece; Liddell's Rome; about 200 pages of each.
Third Class, Parallel Divs., 30 Boys.	Euripides (*Paley's small edition*); Livy, plain text; Ovid's Fasti, plain text; Greek Testament; Wordsworth's Greek Grammar; Charterhouse Latin Grammar; Burton's Church History; Brasseur's French Grammar; Tiarks' German Grammar; Chrestomathie Française; Smith's Greece; Potts' Euclid; Colenso's Algebra; Colenso's Arithmetic.	Liddell's Lexicon; Smith's or Riddle's Latin Dictionary; Smith's Classical Dictionary and Dictionary of Antiquities; Butler's Ancient Atlas.	Euripides, Hecuba, and Electra; Livy, Books XXI., XXII.; Ovid's Fasti, Books IV., V.; Part of St. Luke's Gospel; about 60 pages of Chrestomathie; about 50 German exercises; amount of mathematics variable according to proficiency of boys; Church History, about 160 pages.	As a general rule every boy is "put on" to construe at each lesson; questions have been asked on all the allusions, as also on philological and grammatical points, places being taken in the usual manner. The passage has been frequently translated by the master after the end of the lesson.	Ovid, 400 lines; Euripides, 400 lines. Of English poetry, about 20 lines per week.	Smith's Greece; Burton's Church History.

* A, Principal's, B, Vice-Principal's class. These divisions are consecutive, not parallel.

† A. and B. are under different masters.

TABLE C.

CHELTENHAM COLLEGE.
CLASSICAL SCHOOL.

during the year ended with the Summer Holidays, 1862.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction, forming part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
ORIGINAL.					A Modern History lecture twice a week by the reader in Modern History. The period embraced during the past year was 1558-1660.	Half yearly examination and classification. (Prizes given.)
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	One English Prize Poem.	8 or 10 Latin exercises in the year; a Latin Prize Ode; Latin Prize Hexameters.	None.	None.		
Prose.	An English essay once a fortnight.	A Latin prize essay; a Latin essay once a fortnight.	None.	None.		
TRANSLATION.						
Verse.	None.	Latin prize hexameters; Latin prize elegiacs. *Weekly.*—Latin hexameters and elegiacs alternately; Latin Lyrics, chiefly from Holden's Foliorum Silvula.	Greek prize iambics; Greek prize hexameters. *Weekly.*—Greek iambics, chiefly from Holden's Foliorum Silvula.	*French.*—Le Brun's Materials for Translation; Foliorum Centuriæ. *German.*—Heimann's Materials for Translation.		
Prose.	None.	*Weekly.*—Latin prose, chiefly from Holden's Foliorum Centuriæ; Latin prose also done *vivâ voce.*	*Weekly.*—Greek prose, chiefly from Holden's Foliorum Centuriæ; Greek prose also done *vivâ voce.*	None.		
ORIGINAL.					A Modern History lecture twice a week by the reader in Modern History. The period embraced during the past year was 1558-1660.	Half-yearly examination and classification. (Prizes given.)
	English.	Latin.	Greek.	Modern Foreign.		
Verse.	None.	None.	None.	None.		
Prose.	None.	None.	None.	None.		
TRANSLATION.						
Verse.	None.	About 20 copies of elegiacs, and the same of hexameters.	About 160 lines from Beatson or Foliorum Silvula.	None.		
Prose.	A piece from the authors read occasionally given.	About 40 pieces from Holden's Foliorum Centuriæ.	About 20 pieces from Centuriæ of about 10 lines each.	About 400 lines of Tiarks' Grammar, and 600 lines of Contanseau's Guide.		
ORIGINAL.						
	English.	Latin.	Greek.	Modern Foreign.		
No original compositions of any kind.						
TRANSLATION.						
Verse.	None. 12 lines per week, 480 lines in all.	Holden's Foliorum Silvula, Part I., about	Beatson's iambics, about 14 per week.	None.		
Prose.	None.	Grotefend's prose, about 16 lines per week.	Beatson's Greek prose, about 14 lines per week.	About 30 German exercises (Ahn's); 50 French.		

CHELTENHAM COLLEGE.
Classical School.

TABLE C.—*continued.*

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1862.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
FOURTH CLASS, PARALLEL DIVISIONS, 30 BOYS.	Homer, Horace, Cicero, Plain Texts; Greek Testament; Wordsworth's Greek Grammar; Charterhouse Latin Grammar; Pinnock's Analysis of Old Testament History; Tiarks' German Grammar; Brasseur's French Grammar; Smith's Greece; Van Laun's "Leçons Graduées;" Colenso's Algebra; Colenso's Arithmetic; Potts' Euclid.	Liddell's Lexicon; Smith's or Riddle's Dictionary; Smith's Classical Dictionary, and Dictionary of Antiquities; Butler's Ancient Atlas.	Horace, Odes, I.–III.; Homer, Iliad, II.–IV.; Cicero, pro Sullâ; pro Lege Manilia; St. Matthew's Gospel (about one-third); about 60 pages of "Leçons Graduées;" about 50 German Exercises; Scripture History, about 160 pages; Smith's Greece, about 30 chapters; Euclid, about three propositions weekly; in arithmetic and algebra the amount varies according to proficiency of boys.	All boys are "put on" to construe in each lesson; questions have been uniformly asked on the allusions, parsing, and etymology; the lesson has been also always translated and the matter explained by the master. There has also been constant reference to grammars.	Horace, 1,500 lines; Miscellaneous English Poetry, from Holden's Foliorum Silvula, 700 lines.	Smith's Greece; Pinnock's Analysis of Scripture History.
FIFTH CLASS, 16 BOYS.*	Virgil (*Oxford Pocket Classics*); Herodotus, *Dietsch* (*Teubner*); Ovid (*Eton Selections*); Greek Testament (*various editions*); Roman History (Liddell); Modern Geography (Cornwell); Greek Grammar (Wordsworth); Latin Grammar (Charterhouse); Verses, Penrose; Latin Exercise (Arnold), Greek Exercises (Arnold). *French.* — Brasseur's Grammar; Van Laun's "Leçons Graduées." *Mathematics.* — Arithmetic (Colenso); Algebra (Colenso); Euclid (*Potts*). *Scripture Geography.* — Macleod.	Greek Lexicon (Liddell and Scott, *small edition*); Latin Dictionary (Smith); Classical Dictionary (Smith); Butler's Ancient Atlas; Cornwell's Small Modern Atlas; British Isles (National Society); Atlas of Physical Geography (National Society).	*Virgil, Æn. I., l. 1–493; Æn. II., l. 1–300; *Herodotus, Book V., 1–48; Ovid, various pieces, two lessons a week, 20 lines each lesson; *Part of the Gospel of St. Mark, about 10 chapters. * The work thus marked is gone over twice.	*Any* boy of the form is put on to construe, and is taken up by the boys below him for mistakes in pronunciation, reading, and construing. Most of the boys are set on to construe, and generally all the form, in each lesson. Questions are then passed, *generally round the form*, as to grammar, geography, history, &c., so that, if by chance a boy should not be set on to construe, he is sure to have to answer at least three questions bearing directly on the lesson. The places of the boys are registered after every lesson.	*Ovid.*—Two lessons per week of 10 lines each; about 700 lines in the year. *English Poetry.*—One lesson per week of 30 lines; about 1,000 lines in the year. *Grammar.* — Both Latin and Greek.	Roman History (Liddell), about 12 chapters; Geography, Modern, about 100 pages. The rules and vocabularies of Arnold's Greek and Latin Exercises are learned, and questions asked on the subject of each exercise done.
SIXTH CLASS, 16 BOYS.	Cæsar (*Anthon*), Notes at the end; Xenophon's Anabasis (*White*); Ovid (*Eton Selections*); Greek Testament (*various editions*); Roman History (Liddell); Modern Geography (Cornwell); Greek Grammar (Wordsworth); Latin Grammar (Charterhouse); Verses (Penrose); Latin Exercises (Arnold); Greek Exercises (Arnold). *French.* — Brasseur's Grammar; Van Laun's "Leçons Graduées." *Mathematics.* — Arithmetic (Colenso); Algebra (Colenso); Euclid (*Potts*). *Scripture Geography.* — Macleod.	Greek Lexicon (Liddell and Scott, *small edition*); Latin Dictionary (Smith); Classical Dictionary (Smith); Butler's Ancient Atlas; Cornwell's Small Modern Atlas; Geography of British Isles (National Society); Atlas of Physical Geography (National Society).	* Cæsar, Book II.; Book III., chap. i.–xx.; * Xenophon, Anabasis, Book III., chap. i., iv., v.; Book IV., chap. i., ii. (part); Ovid, various pieces, once a week, 20 lines; *Part of the Gospel of St. Matthew, about 10 chapters. * The work thus marked is gone over twice.	Same method adopted as in 5th Form.	*Ovid.*—Two lessons per week of 6 lines each; old lesson repeated with the new lesson. About 400 lines in the year. *English Poetry.*—One lesson per week of 30 lines; about 1,000 lines in the year. *Grammar.* — Both Latin and Greek.	Roman History (Liddell), about 12 chapters; Geography, Modern, about 100 pages. The rules and vocabularies of Arnold's Greek and Latin Exercises are learned, and questions asked on the subject of each exercise done.

* The 5th and 6th are taught by the same master.

TABLE C.—*continued.*

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays, 1862.	4. Method of hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
SEVENTH CLASS, PARALLEL DIVISIONS, 30 BOYS.	Scripture History, (Watts); History, Dr. Smith's smaller Greece; Euclid (*Potts*); Arithmetic, Colenso; Algebra, Colenso; Palæstra Latina, (*Kennedy*); Xenophon, *Major's* Selections; Greek Testament; Latin Exercises (Bradley); Greek Prose, Part I., (Arnold); Latin Verses, (Penrose); Latin Grammar (Kennedy); Greek Grammar (Wordsworth); French Leçons Graduées, by Henri Van Laun; Beginner's French Book by Delille.	Greek Lexicon, Liddell and Scott; Latin Dictionary, Smith's *smaller edition;* Classical Dictionary, Smith's *smaller edition;* Dictionary of Antiquities, Smith's *smaller edition;* Latin Gradus, Yonge; Ancient Atlas, Butler; Modern Atlas, Dower.	Palæstra Latina (Virgil) about 800 lines; portions also of the Selections from Ovid, Xenophon, Major's Selections, 18 pages; Greek Testament, 8 chapters; Leçons Graduées by Henri Van Laun, about 50 pages.	The whole class is called up. Each boy construes a portion of the lesson. It is then thoroughly parsed, questions being passed round the class, to each boy in turn. Rules of syntax are given for government, and rules, &c., for formation of tenses. In verse, rules for prosody are given. Etymology is attended to. Frequent comparison is made of Latin and Greek constructions. History, geography, and dates occurring either in, or in connexion with, the lesson receive proper attention. At the end of the lesson the boys close their books, and render into the original (*vivâ voce*) words and sentences given by he master in English.	Ovid, 300 lines; Scripture History (Watts), chapters xxiii.–xxvi.; Church Catechism. Heart lessons in Greek and Latin Grammar are said every day. Latin prosody once a week.	History, Smith's smaller Greece, about 100 pages.
EIGHTH CLASS, PARALLEL DIVISIONS, 30 BOYS.	Scripture History, (Watts); Roman History, (Dr. Smith's *small edition*); Euclid (*Potts*); Arithmetic, Colenso; Algebra, Colenso; Palæstra Latina (Kennedy); Dalzell's Analecta Græca Minora; Greek Testament; Latin Exercises (Bradley); Arnold's Greek Exercises (Prose) Part I.; Latin Verses (Penrose); Latin Grammar (Kennedy); Greek Grammar (Wordsworth); French Leçons Graduées by Van Laun; French Book, (Delille).	Greek Lexicon, Liddell and Scott; Smith's Latin Dictionary, *smaller edition;* Smith's Classical Dictionary, *smaller edition;* Smith's Antiquities, *smaller edit.;* Latin Gradus (Yonge); Ancient Atlas (Butler); Modern Atlas (Dower).	Palæstra Latina, 15 pages; portions also of the Selections from Ovid; Dalzell's Analecta Græca Minora (Palæphatus and Lucian) 15 pages; Greek Testament, 7 chapters; Leçons Graduées, about 50 pages.	The whole class is called up. Each boy construes a portion of the lesson. It is then thoroughly parsed, questions being passed round the class to each boy in turn. Rules of syntax are given for government, &c., rules for formation of tenses, and in verse, rules for prosody. Frequent comparison is made of Latin and Greek construction, and points of history and geography, occurring either in, or in connexion with the lesson, are noticed. At the end of the lesson, the boys close their books, and render into the original (*vivâ voce*) words and sentences given by the master in English.	Ovid, 250 lines; Scripture History Watts, chapters xxiii.—xxvi. Church Catechism. Lessons by heart in Greek and Latin Grammar are said every day; Latin prosody once a week.	History, Smith's smaller Roman History, about 100 pages.
NINTH CLASS, PARALLEL DIVISIONS, 30 BOYS.	*McBurney's* Ovid; Kennedy's Latin Grammar; Barry's Syntaxis; Penrose's Verse Book; Bradley's Latin Exercises; *Dalzell's* Analecta Minora; Wordsworth's Greek Grammar; Howard's Greek Exercises; Goldsmith's Geography; Chepmell's History; Delille's French Book; Watts' Scripture History; Colenso's Arithmetic.	Chambers' Latin Dictionary; Liddell and Scott's Greek Lexicon; Butler's Ancient and Modern Atlas.	Ovid, 450 lines; Analecta, 30 fables.	Each boy construes and parses, going completely through every inflected word; grammatical rules, &c. given.	Kennedy's Latin Grammar, 55 pages, with Prosodiæ Compendium; Wordsworth's Greek Grammar, 99 pages; Watts, about 40 pages; Barry's Syntaxis, 25 pages; Delille, pages 19 to 40.	Chepmell's History, 150 pages; Goldsmith's Geography, about 140 pages.

TABLE C.—*continued.*

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *viva voce*, and the Quantity of each in the Year ending with the Summer Holidays, 1862.	4. Method of Hearing the Form in such construing or translating Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
TENTH CLASS, PARALLEL DIVISIONS. 30 BOYS.	Adams' Greek Delectus: Eclogæ Ovidianæ; Chepmell's History of England; Abridgment of Butler's Geography; Wordsworth's Greek Grammar; Charterhouse Latin Grammar; Arnold's First Verse Book; Bradley's Latin Exercises; Howard's Greek Exercises; Watts' Scripture History.	Liddell and Scott's Greek-English Lexicon (abridged); Chambers' Latin Dictionary; Butler's Atlas.	Greek Delectus, 10 pages; Eclogæ Ovidianæ, 20 sections.	Each boy construes in turn, and then parsing questions are put. Corrections are passed down the class, and places taken accordingly.		
ELEVENTH CLASS, A. AND B. DIVISIONS. 32 BOYS.	Jacob's Latin Reader (latest edition); Kennedy's Latin Grammar; Wordsworth's Greek Grammar; Butler's Geography (abridged); Markham's English History; Colenso's Arithmetic; Watts' Scripture History; Delille's French Grammar and Reading Book.	Smith's smaller Latin Dictionary; Liddell and Scott's Lexicon (abridged); Butler's Ancient and Modern Atlases.	Jacob's Latin Reader, 1, 3, 4. Wordsworth's Greek Grammar, first two pages of Delectus sentences, in the first division only, and in the latter half of the year.	Each boy to construe in turn and parse in turn; the latter half of the class construing the old lesson, and then reading off the Latin into English without using the Latin words, the parsing conducted in a regular order, according to a parsing card.	Charterhouse Latin Grammar, the whole except the Delectus sentences. Wordsworth's Greek Grammar, substantives, adjectives, pronouns, and verbs, with Paradigms. Butler's Geography (abridged), Great Britain and France, Ancient and Modern Greece and Italy. Watts' Scripture History, the historical chapters. Church Catechism.	Markham's English History, about 25 chapters.
TWELFTH CLASS, A. and B. DIVISIONS. 27 BOYS.	Mrs. Markham's History of England (latest edition); Henry's First Latin Book (1st D.) (latest edition); Charterhouse Latin Grammar (edition 1857); Howard's Introductory Latin Exercises (2nd D.); First Lessons in Geography, by a Lady (206th thousand); Colenso's Arithmetic (latest edition); Delille's French Grammar; Butler's Arithmetical Tables; Watts' Scripture History.	Dr. Smith's (smaller) Latin-English Dictionary; Butler's (smaller) Modern Atlas.	Second construing lessons, Charterhouse Latin Grammar—1st division, pages 83, 84, 85, 86, 87, and 88; 2nd division, pages 82, 83.	Every boy in turn reads, construes (the English with the Latin word), and parses (with the help of a parsing card); then reads through the English, not using the Latin words, always doing *some* portion of the preceding lesson.	The New Testament, St. Matthew, chapters v., vi., vii., viii., ix., x. First Lessons in Geography, Lesson 1 to 20.	The Bible, the First Book of Kings. Markham's History of England, from James I. to Geo. I. Charterhouse Latin Grammar, the Accidence. Delille's French Grammar. Watts' Scripture History, chapters i., ii., iii., vii., viii. Church Catechism.

CLASSICAL SCHOOL.

TABLE D.

RETURN showing the EMPLOYMENT of TIME in LESSONS by the several Forms or Divisions and the COMPOSITIONS done during the Year ended at the Summer Holidays 1862.

FIRST CLASS, A DIVISION, 16 BOYS.

Lessons and Compositions, August to December 1862.*

	Lessons.	Compositions.
Sunday	Voluntary attendance at the Principal's communicant class, 9½ to 10½ a.m.	
Monday	9 to 10. Lecture on Prayer Book. 10 to 11. Thucydides, VI., VII. 11 to 12. Mathematics (in three divisions). 2 to 3. Preparation of Juvenal or Persius. 3 to 4. Juvenal or Persius. 4 to 5. Mathematics or French† or extra subjects.‡	Latin prose (original and translation). Latin verse (hexameters, elegiacs, and lyrics) generally translations.
Tuesday	9 to 10. Greek Testament, Acts. 10 to 11. Thucydides. 11 to 12. Mathematics. 2 to 3. Modern history lecture. 3 to 4. Horace's Epistles (without preparation). 4 to 5. German or extra subjects.	Greek iambics, Greek prose translation.
Wednesday	9 to 10. Composition at desk without dictionary (generally Latin or Greek prose). 10 to 11. Juvenal. 11 to 12. Mathematics. Half Holiday.	
Thursday	9 to 10. Church History. 10 to 11. Aristophanes. 11 to 12. Mathematics. 2 to 3. Preparation of Tacitus' Histories, V. 3 to 4. Tacitus. 4 to 5. French, Mathematics, or extra subjects.	Three exercises shown up each week, on Tuesday, Thursday, and Saturday, which are corrected, and then re-written for second correction. An English essay occasionally substituted for one such exercise; and an accurate analysis of the Prayer Book lecture required each week.
Friday	9 to 10. Greek Testament. 10 to 11. Aristophanes. 11 to 12. Mathematics. 2 to 3. English Literature lecture. 3 to 4. Horace's epistles. 4 to 5. German or extra subjects	
Saturday	9 to 10. Composition at desk. 10 to 11. Tacitus. 11 to 12. Mathematics. Half Holiday.	

SUMMARY OF LESSONS.

	Hours.
Religious (including Greek Testament).	4
Greek (including Greek Testament)	6
Latin	6
Mathematics	6 or 8
History	2
French and German	2 or 4
Composition in school	2
Preparation	2
Extra subjects	2 or 4
Total (in any case)	30

* This return is added, because, since the appointment of the present Principal in August 1862, some changes (likely to be permanent) have been made in his division of First Class.

† Few boys take up both French and German unless preparing for the Civil Service Examinations.

‡ By extra subjects is meant *private tuition* by Principal or Vice-principal of the highest boys in classical or mathematical subjects not read by the class.

FIRST CLASS, A AND B DIVISIONS, 30 BOYS.*

Lessons and Compositions, Midsummer 1861 to Midsummer 1862.

	Lessons.	Compositions.
Sunday	Prepare Greek Testament.	
Monday	9 to 10. Divinity lecture (theological tutor). 10 to 11. Greek Testament lesson. 11 to 12. Mathematics (in three divisions). 2 to 3. Lessons prepared and compositions looked over. 3 to 4. Horace repetition, and construing. 4 to 5. Mathematics or French.	Latin prose (original and translations).
Tuesday	9 to 10. Repetition and Greek construing (play). 10 to 11. Greek construing (prose author). 11 to 12. Mathematics. 2 to 3. Lecture, Modern history. 3 to 4. Latin construing. 4 to 5. Mathematics or German.	Latin verse (hexameters, elegiacs, lyrics) usually translations.
Wednesday	9 to 10. Repetition and Greek construing (play). 10 to 11. Greek construing. 11 to 12. Mathematics. Half Holiday.	Greek iambics, Greek prose translation.
Thursday	9 to 10. Greek Testament. 10 to 11. Greek construing (prose). 11 to 12. Mathematics. 2 to 3. Latin prepared and composition looked over. 3 to 4. Latin construing (Plautus or Terence). 4 to 5. Mathematics or French.	Three exercises shown up each week; Tuesday, Thursday, and Saturday; occasionally an English Essay.
Friday	9 to 10. Repetition and Greek construing (play). 10 to 11. Greek construing (prose). 11 to 12. Mathematics. 2 to 3. Lecture, Modern History. 3 to 4. Latin construing. 4 to 5. Mathematics or German.	
Saturday	9 to 10. Repetition and construing Cicero. 10 to 12. Composition at desk (without books of reference). Half Holiday.	

SUMMARY OF LESSONS.

	Hours.
Divinity	1†
Greek, including Greek Testament (2 hours).	8
Repetitions	1
Latin	5
Mathematics	5, 7, or 9
French and German	2 or 4
Modern history lectures	2
Looking over composition at odd times and composition at desk.	2
Preparation	2
Total (in any case)	30

N.B. Three exercises have usually been done at home, with books of reference, and one in school without such help, the chief place being given to Latin prose.

* In First and Second Form, divisions A and B, though reading nearly the same subjects, are nevertheless consecutive divisions.

†3 hours, if Greek Testament be included.

SECOND FORM, A AND B DIVISIONS, 40 BOYS.*

Lessons and Compositions, Midsummer 1861 to Midsummer 1862.

	Lessons.	Compositions.
Sunday	Prepare Divinity and Greek Testament.	
Monday	9 to 10. Mathematics. 10 to 11. Greek Testament (construe, &c.) 11 to 12. Prepare Greek play. 2 to 3. Construe Greek play and say Greek lines by heart. 3 to 4. Composition given out; corrected, and marks assigned, and remarks made. 4 to 5. Prepare French.	A set of elegiacs (16) varied every alternate Monday by (16) hexameters given up every Wednesday morning.
Tuesday	9 to 10. Mathematics. 10 to 11. Prepare Greek author (prose). 11 to 12. Construe the above, and say some lesson (either from a Latin or Greek author or grammar) by heart. 2 to 3. French (with French Master). 3 to 4. History (either Grecian or Roman). 4 to 5. Composition given out corrected (as above).	A piece of English of (16) lines selected from Holden's Foliorum Centuriæ, translated into Latin prose given up every Friday morning.
Wednesday	9 to 10. Mathematics. 10 to 11. Prepare Latin prose author. 11 to 12. Construe the above (with some lesson by heart). Half Holiday.	
Thursday	9 to 10. Mathematics. 10 to 11. Divinity Lesson. 11 to 12. Prepare Greek author (play). 2 to 3. Construe the same with some Latin lines by heart. 3 to 4. Prepare Latin author (verse). 4 to 5. Construe the above.	Greek iambics (8) or English prose translated in Greek prose every alternate week, given up every Monday morning. Forming three compositions every week.

TABLE C.

CHELTENHAM COLLEGE.
CIVIL AND MILITARY DEPARTMENT.

TABLE C.

RETURN of the Work done by the several Forms or Divisions

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1862.	4. Method of hearing the Form.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
FIRST CLASS, 17 BOYS.	*Mathematical.* Todhunter's Algebra, Trigonometry, Theory of Equations, Co-ord. Geometry and Conic Sections, Statics, Differential and integral Calculus; Parkinson's Mechanics; Twisden's Mechanics; Pratt's Mechanics; Potter's Hydrostatics; Wrigley's Examples in Mathematics. *Classical.* The *Oxford editions* of Thucydides, Xenophon, Æschylus, Aristophanes, Homer, Tacitus, Horace, Virgil, &c., and *Long's Edition* of Cicero. *English.* The Student's Hume; Adams' English Language; Latham's English Grammar; Guyot's Earth and Man; Trench, English Past and Present; Trench on Words. *French.* Delille's Grammar; Contanseau's Prosateurs, Mariette's Half Hours of Translation. *German.* Tiarks' Grammar; Schiller's Don Carlos and Thirty Years War. *Hindustani.** Monier Williams' Introduction to Hindustani Grammar and Hindustani Primer; Forbes' Grammar, Bagh ó Bahar, and Hindustani Manual. Macaulay's Fortification; Straith's Fortification; Col. Jackson's Surveying; Hall's Descriptive Geometry; Burchett's Practical Geometry. *Physical Science.* Wilson's Chemistry; Sir W. Snow Harris on Electricity, Magnetism, and Galvanism; Lardner on Heat.	Hutton's Tables of Logarithms; Liddell and Scott's Greek Lexicon; Riddle's Latin Dictionary; Spier's French Dictionary; Black's Edition of Thienne's German Dictionary.	N.B.—In this department of the College, and especially in the two upper classes, the work consists chiefly of mathematics, theoretical and practical, physical science, fortification, and surveying. Classics are studied only by a few boys who, having made considerable progress before joining the upper special classes, are enabled to continue Latin and Greek by the omission of such subjects as fortification, surveying, and physical science. In mathematics the boys of the first class are in different stages of proficiency, but during the school year they are generally enabled to read co-ordinate Geometry and Conic Sections, Statics and Dynamics, Hydrostatics, and some few boys who have greater mathematical talent are enabled to read the Differential and Integral Calculus. The subjects taught in the lower classes are revised in the first class. *Classics.* There have been three boys reading Latin and Greek; they have read Thucydides, Books II. and III., Xenophon, Scrip. Min. (Hiero) and Agisilaus, Æschylus Agam., Aristophanes (Nubes); Homer's Odyssey, Book XXI.; Tacitus, Agricola; Juvenal, Satires 1, 2, 3, 5, 10, 13; Horace, Odes, Books III., IV., and Epistles; Virgil, Georgics; Cicero, de Senectute and de Amicitiâ. Macaulay's Field Fortification; Jackson's Surveying.	*Mathematics.*—The boys' knowledge of Euclid is tested by *vivâ voce* examinations, the figure being drawn progressively as the proposition is said, and drawn sometimes by the pupil, sometimes by the master, and varied from that in the text book when it can be done. Sometimes the propositions are written out, *in full* generally, at times by means of the margin references, which is equivalent to a mental repetition of the proposition, and enables the pupil to write out a great many propositions in a very short time. Mathematical subjects of an analytical character are tested chiefly by papers, partly by *vivâ voce* questioning. Problems are worked before the master, and various modes of solution are compared and discussed. *Fortification.*—*Vivâ voce* and by paper; also constructions of plans, profiles, and other sections, with the calculations of dimensions. *Surveying.*—Some two or three boys selected in rotation set up and adjust the surveying instruments, the theodolite, prismatic compass, or other instrument employed on the survey; these make the observations and announce the readings, which the others enter in their field book; sometimes the readings are plotted at the time on blocks previously prepared, and in this case the survey and the plotting proceed simultaneously; but generally the entries made in the field books are plotted on the return to the school, where the finished plan of the survey is made. *History* and such like subjects are tested by oral questioning and answers, in addition to written papers; also by an analysis of the lesson. *Geometrical Drawing and Descriptive Geometry* by constructions on one, two, or three co-ordinate planes, according to the nature of the problem. *English Language and Literature*, by written papers and essays.	None.	Robertson's Church History; Blunt's History of the Reformation; Adams' English Language (about three fourths); Latham's English Grammar; Guyot's Earth and Man (about a half); Macaulay's Field Fortification; Jackson's Military Surveying.
SECOND CLASS, A. and B. DIVISIONS, 26 BOYS.	Euclid's Elements; Colenso's Arithmetic; Todhunter's Algebra (*2nd edition*), Todhunter's Trigonometry; Todhunter's Theory of Equations; Cape's Course (Vol. I., *5th edition*); Wrigley's Examples (*6th edition*); Chambers' Tables of Logarithms. The *small Oxford editions* of Tacitus, Homer, Horace, Aristophanes, Virgil; Cicero (*Long's edition*); Holden's Foliorum Centuriæ for composition; Student's Hume; Adams' English Language; Trench, English Past and Present, On Words; Milton's Works, verse. Modern Languages, &c. The same books as are used in the First Form.	Liddell and Scott's Greek Lexicon; Smith's Latin Dictionary; Contanseau's French Dictionary; Black's German Dictionary.	*Mathematics.* Arithmetic, Euclid, Books I.–VI., Algebra, Plane Trigonometry, Spherical Trigonometry; Theory of Equations; Application of Algebra to Geometry. *Classics.* Tacitus, Agricola; Horace, Epistles; Virgil, Georgics; Cicero, De Senectute; Homer, Odyssey, Books XII.–XXI.; Aristophanes, Nubes. *English Language, Literature, &c.* English, Past and Present, by Trench; English Language, by Adams; Milton, Comus, Lycidas, L'Allegro, Il Penseroso; History from the Conqueror to the present Time.	The second class consists of two divisions (A) and (B); while one division is engaged in mathematics with the class master, the other division is with the vice master in classics or English, or with some of the extra masters in French, science, drawing, &c. The instruction in mathematics is conducted orally and by paper. In Euclid and the more elementary subjects the class is arranged before the master's desk, and questions are successively addressed in order to each boy. If any boy fail to answer his question, the next boy attempts it, and if he fail, the next, and so on, till some boy answers it, and then he takes the place of the boy to whom the question was originally proposed, all the others going down one place. This plan, with obvious modifications, is adopted when the class enters on a new subject. In the solution of problems and examples, and in the writing out of book-work, marks are assigned to each problem, or each piece of book-work, and the boy who attains the greatest number of marks, is, at the end of the hour of lesson, placed at the head of the form, the others occupying places according to their marks.	None.	The Student's Hume, from William the Conqueror to the end; Adams' English Language, the whole work; Trench's English Past and Present, the whole work; Milton's minor works; Macaulay's Fortification, chaps. i.–xi. inclusive; Euclid, Books V. & VI.; Algebra, Todhunter's, c. xliii. to the end of the work; Todhunter's Plane Trigonometry, chap. vi. to end of Book; Todhunter's Spherical Trigonometry; Todhunter's Theory of Equations, various portions; Cape's Mensuration.

* Throughout the Modern Department two Modern Languages are learnt, one of which is French; the other is either German or Hindustani.

TABLE C.

CHELTENHAM COLLEGE.
CIVIL AND MILITARY DEPARTMENT.

during the Year which ended with the Summer Holidays, 1862.

	7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.				8. Other Subjects of Instruction forming part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
ORIGINAL.					Some boys of the class study Chemistry, Electricity, Magnetism, and Heat; others Geology and Mineralogy; civil drawing. Three hours weekly are given to Physical Science in School, and two hours to preparation of an evening. Drawing of all kinds; Free-hand Landscape, Models, Perspective and Projections.	*Vivâ voce* and by papers in portions of the text books in use, in lectures and experiments previously given, also by manipulation by the pupils themselves. By drawing before the drawing master subjects chosen by him, and by executing drawings in perspective, from models and from nature.

Prose.	One essay every week.					
TRANSLATION.						
Verse.						
Prose.		A piece of English taken from Holden's Fol. Cent. is translated into Latin every week by those boys who study Classics.	One piece every week, selected from Holden's Fol. Cent.	French.—One piece every week from Mariette's Half Hours of Translation. German.—One exercise every week from Tiark's exercises.		

CHELTENHAM COLLEGE.
Civil and Military Department.

TABLE C.—*continued.*

1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays, 1862.	4. Method of hearing the Form.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to to Memory, and the Quantity of each in the same Year.
CIVIL CLASS. 16 BOYS.					
Potts' Euclid; Colenso's Arithmetic; Barnard Smith's Arithmetic; Colenso's Algebra; Wrigley's Examples; Chepmell's History; Edwards' English Composition; Jobister's Bookkeeping; Pinnock's Scripture History (analysis); Cornwell's Geography; Tiarks' German Grammar and Exercises; Ahn's do.; Heimann's Translation into German; Goethe's Götz von Berlichingen; Black's German Dictionary; Contanseau's Prosateurs; Delille's Grammar; Mariette's Half Hours of Translation; Contanseau's Dictionary.	Dower's Atlas.	Composition in English;* translation only in French and German, or Hindustani; Forbes' Manual and Grammar (Hindustani); Monier Williams' Rudiments and Hindustani Primer.	Each boy is put on successively until *every* boy in the class has had an opportunity of showing whether he can construe the lesson, as far as can be ascertained from the style and manner in which he construes the passage that *accidentally* falls to him, beginning with a different boy every lesson. *Every* boy has likewise some questions in parsing, as far as the time will allow, and the lesson is usually finished by the chief portion being construed again by the master to the class. Two pages of the Charterhouse grammar are usually said by the class, each boy successively saying a small portion. When a boy does not answer correctly, the question is passed on until answered by another boy; a fresh question is then put to the same boy who made the mistake, and the same plan is followed until the boy who made the mistake has answered some question correctly, to ascertain whether the first mistake was a solitary fault, or whether he knows but little about the lesson at all. A similar plan is adopted in hearing a proposition of Euclid. Places are not taken during the lesson, but the faults are reckoned by marks, and fresh places are taken at the beginning of the next lesson, according to the marks of the last lesson. The first division have said the 4th Book of Euclid, and as far as prop. 13 in Book VI. The second division have said the 2nd Book of Euclid, and as far as prop. 15, Book III. The third division only as far as prop. 27, Book I.		Chepmell's History of England, from William the Conqueror to Queen Anne; Cornwell's Geography of Europe, including the notes and observations; Pinnock's Analysis of Scripture History, from 2nd Book of Kings to Book of Esther, inclusive. This would be the work of the class, supposing no change or absence of pupils during the half-year. Various portions of Euclid, according to the ability and attainments of each individual.
DIRECT LINE AND SANDHURST CLASSES. 26 BOYS.					
Euclid's Elements; Colenso's Arithmetic: Colenso's Algebra; Todhunter's Trigonometry; Wrigley's Examples; Chambers' Tables of Logarithms; Pix's Examples in Arithmetic; small *Oxford editions* or Anthon's, of Horace, Virgil, Cæsar; Chepmell's Course of History; Lennie's English Grammar; Edwards' Composition. For other books see column 8.		Horace, Odes; Cæsar, Commentaries; Virgil, Æneid; about two books of Cæsar, and two books of the Æneid or of the Odes. *In Algebra, Arithmetic, and Logarithms*, each boy works examples on paper, and comes to his master for assistance, as required. *In Trigonometry*, a portion of the book-work (previously prepared), is given to be written out. Examples worked as in Algebra and arithmetic. *English Grammar*, written or *vivâ voce* answers to *vivâ voce* questions, and written exercises. Another, in Euclid, Books I., II., 2 to proposition 17 of III. *Arithmetic*, vulgar and decimal fractions, practice, proportion, interest, simple and compound, discount, insurance, stocks, profit and loss, and proportional parts, and several of the miscellaneous in Colenso. *Algebra.*—Elementary rules, fractions, square root, and simple equations of 1, 2, and 3 unknowns.	The classes consist of boys drafted from other classes when preparing for the military examinations, and of suitable age. Being of different capabilities and attainments, they require individual attention in mathematics. History and geography, generally written answers to *vivâ voce* questions given to the class on the portion prepared. *In Euclid*, out of the number of propositions prepared by each boy for each lesson, one is selected to be said *vivâ voce* or written out by him. At times, more are so selected, according to circumstances, as in case of failure, or when receiving the last finish for examination.	In History the year's work will be Chepmell's Course, from the beginning to end of English History. In geography, Cornwell, from beginning to end of British Isles. In English Grammar, Lennie's, almost through, with some of the examples for correction.	As the capabilities and attainments of those who compose these classes are so utterly different, some, when admitted, being almost ignorant of the elements of mathematics, others well advanced and of considerable attainments, the quantity of work done must necessarily vary largely for different individuals. This, and the fact that each boy is taught distinctly from others in his particular work, render it very difficult to assign an estimate of the amount of work done. For instance, one boy has been several times through the 1st, 4th, and 6th Books of Euclid, Todhunter's Trigonometry, to end of chapter xvi., omitting chapters ix., xi., xii., and several other Articles. In algebra, most of the miscellaneous examples at the end of Colenso, and a few examples in almost everything from the beginning to the end, and other examples from Wrigley. In arithmetic, stocks, profit and loss, proportional parts, several miscellaneous at the end of Colenso, and several of Pix's Examples. In logarithms, several of the examples in Wrigley.

* Boys who have been in the class previous to this half-year have been through Edwards' Exercises from the formation of simple sentences to the composition of essays. Those who have only come into the class this half-year have written the same exercises, as far as Ex. 26, being the great body of the class. The last who joined the class have written only to chapter xii. The elder ones, who are intended for the Government offices, have practised précis-making, and forming abstracts of correspondence from the official Civil Service Reports.

TABLE C.—*continued.*

CHELTENHAM COLLEGE, Civil and Military Department.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming Part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same year.	9. Methods employed to test individual Proficiency in such "other Subjects."
ORIGINAL.					The subjects of instruction in this class would vary with the requirements of the office the pupil was intended for. If a boy were intended for an office where book-keeping was an important feature of his future examination, he would devote more hours a week than specified above, while others, who might require more advanced mathematics or Latin, would be employed in the latter subjects. In book-keeping some boys have gone almost through the system of double entry, others have only finished single entry, and some have only practised commercial forms, with the beginning of single entry. In arithmetic the more advanced are continually practised in arithmetical problems connected with all the rules of arithmetic, while some are still learning the single rule of three and practice.	A great portion of the work of this class being done on paper at their seats, and each individual in arithmetic, composition, précis, or abstract making, studying by himself, owing to their different degrees of attainment and ability, the individual proficiency is ascertained by observation of individual progress. The same method is adopted in arithmetic and book-keeping.

	English.	Latin.	Greek.	Modern Foreign.		
Verse.					*French Language.*—Delille's Grammar; Contansau's Prosateurs; Marriette's Half Hours of Translation, and Burnet's Idioms.	*Vivâ voce* and written exercises.
					German Language.—Tiarks' German Grammar; Ahn's First German Course.	*Vivâ voce* and written exercises.
					Hindustani.—Forbes' Bagh ó-Bahar; Grammar and Manual; Williams' Grammar and Primer.	*Vivâ voce* and written exercises.
					Science.—Page's Geology; Lardner's Heat, and private notes.	Written answers.
Prose.	An occasional piece of composition, or a letter.				*Fortification.*—Macaulay.	*Vivâ voce.*
					Geometrical Drawing.—Winter's Practical Geometry.	
					Divinity.—Bible; Prayer-Book; Riddle's Scripture History; Robertson's Church History.	*Vivâ voce.*
TRANSLATION.					AMOUNT OF WORK.	
Verse.					*In French.*—Delille's Grammar, accidence and syntax; Prosateurs, translation of about 200 pages (different pieces); Half Hours of Translation, about 100 pages of different pieces; Brunet's Idioms, three exercises written a week, lessons of grammar, idioms, and construing in class.	
					German.—Translation, 5 fables in Tiarks' Grammar; grammar, irregular reflective verbs, exercises.	
					Science.—Parts of geology and the whole of heat.	
					Fortification.—Ch. v. to xi. (incl.), and ch. i., Macaulay.	
					Practical Geometry.—Part I., Winter's.	
Prose.					*Hindustani.*—By various members of the class; Williams' Primer, words learned and transposed into Hindustani characters; introduction to grammar nearly gone through; Forbes' Manual, exercises done; grammar, a few stories; Bagh ó Bahar, about 10 pages as the maximum.	
					Divinity.—50 pages of the Church History.	

CHELTENHAM COLLEGE.
Civil and Military Department.

TABLE C.—*continued.*

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors, or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *vivâ voce*, and the Quantity of each in the Year ending with the Summer Holidays 1862.	4. Method of hearing the Form in such Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
THIRD CLASS, A. AND B. DIVISIONS, 28 BOYS.	Potts' Euclid; Colenso's Arithmetic; Barnard Smith's Arithmetic; Pix's Examples in Arithmetic; Colenso's Algebra, Part I.; Todhunter's Algebra; Wrigley's Examples; Todhunter's Trigonometry; Student's Hume; Cornwell's Geography; Riddle's Scripture History; Contanseau's Prosateurs; Mariette's Half Hours of French Translation. Delille's French Grammar; Brunet's French Idioms. Tiarks' German Grammar; Ahn's Exercises; Chambers' First Reading Book; Schiller's Don Carlos, or Forbes' Hindustani Grammar; Forbes' Manual; Monier Williams' Grammar; Ditto Primer. Page's Treatise on Geology; Heather on the Use of Instruments; Winter's Practical Geometry, Part I. Robertson's Church History, Morell's Grammar, and Analysis of Sentences.	Tables of Logarithms (Chambers'); Dower's School Atlas; Contanseau's French Dictionary.	Mathematics being the basis of education in this Department, the mathematical work is given in this column. Euclid, Definitions of, Book V., and Books I., II., III., IV., VI., revised with deductions; Arithmetic (revised); Todhunter's Algebra, Chapters xxxiv.–xliii. inclusive (omitting chapter xl.), with book work proofs. Solution of Triangles, with Heights and Distances and Geometrical Proofs of Rules; Todhunter's Plane Trigonometry, Chapters i.–vii. inclusive. Those who study classics read Horace, Juvenal, or some other Latin author, three or four times a week with the Classical Master of the Department. Portions of the French and German Reading Books are translated by the class with the French and German masters.	This class is divided into two sections, A. and B. The work given in paper C. is that of the section A., but the work of section B. is in every respect analogous to it, only so arranged that while one division is with the class master the other is either with an extra master or is preparing work at their desks. The pupils ordinarily remain in each section for one half year, and each is under absolute tuition for 26 hours in each week. At this point in the department, classics are entirely discontinued, except as a voluntary study; and no construing or translating lessons are therefore done by the class, excepting by those few boys who carry on the study with the Classical Master. In history, geography, and Euclid lessons, mistakes are passed round the class for correction, and the boys take places at the time, and the order is entered in a book at the end of the hour. In history and geography lessons each boy is asked about five or six questions. In Euclid *every boy* is required to say the whole or part of a proposition, and to answer questions arising out of the lesson. In the other subjects of mathematical instruction, the rule, both as regards its proof and its practice, is explained by the master with the aid of a black board, and this lesson is then made the subject of question and answer, and of general examination, until the master believes that it is adequately understood. Examples are then worked by boys both at home and at their seats, which are brought up to class. The master discusses the several examples, and attaches a value in marks to each. The boys reckon these for themselves, and at the close of the hour the master looks over each individual's exercise, makes any observations on them he thinks requisite, and then enters in his book the order of the class as determined by the number of marks obtained from these examples.	None.	The Student's Hume, from 1066 A.D. to 1485 A.D. Cornwell's Geography, as far as relates to Africa, America, and Oceania, including both the physical and political geography of the several countries. Robertson's Church History. Morell's Grammar and Analysis of Sentences. Riddle's Scripture History, from the History of David in Chapter xxix. to the end of the Gospel History in Chapter xlvii.
THIRD CLASS, C. AND D. DIVISIONS, 25 BOYS.	Potts' Euclid; Colenso's Arithmetic; Colenso's Algebra; Riddle's Scripture History; Anthon's Cæsar; Student's Hume; Cornwell's Geography; Wrigley's Examples. French, German, Hindustani, and Physical Science; the same books as in the III. A and B.	Dower's Atlas; Cornwell's Atlas; Riddle's Latin Dictionary.	Cæsar, V., 1–30; Do. VI., 1–30; Euclid, Books I.–VI.; Colenso's Arithmetic (to end); Colenso's Algebra, chap. i.–xiii.; Student's Hume, chap. v.–ix.; Cornwell's Geography (Asia); French Grammar, Accidence and part of Syntax; Contanseau's Prosateurs, about 200 pages; Half Hours of Translation, 80 pages; Brunet's Idioms, 30 pages; Tiarks' German Grammar to end of irregular verbs; Ahn's German Reader, 6 pages. Science: Pneumatics; Electricity, voltaic and frictional.	Each boy is put on successively, beginning at the top of the class. If the boy who is on makes a mistake, or cannot answer the question proposed, such question is passed down the class till it is answered, and the boy who answers it correctly takes the place of the one to whom it was first put. The above method is adopted both in hearing *Euclid*, and also in *Latin*, *History*, and *Geography*. The lessons in arithmetic and algebra are done on paper.	None.	None.

TABLE C.—*continued.* CHELTENHAM COLLEGE. Civil and Military Department.

7. The Kinds and Quantities (so far as they can be given) of Composition done in the Form in the same Year.					8. Other Subjects of Instruction forming part of the regular Work of the Form, and taught either by Lecture, Demonstration, Experiment, or Observation, with the Amount of Time devoted to them, or of Ground gone over in the same Year.	9. Methods employed to test individual Proficiency in such "other Subjects."
ORIGINAL.					Geology and Mineralogy; two hours in each week. In this class the instruction in these subjects is completed, so that the boys may commence the study of experimental sciences on their promotion.	In one lesson certain subject matter is dictated to the class; this they are expected to prepare, and in this they are examined the following lesson. They are also examined in a portion of Page's Text Book of Geology.

CHELTENHAM COLLEGE.
Civil and Military Department.

TABLE C.—*continued.*

	1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors construed or translated *viva voce*, and the Quantity of each in the Year ending with the Summer Holidays 1862.	4. Method of hearing the Form in such Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
FOURTH CLASS, A. AND B. DIVISIONS, 28 BOYS.	Potts' Euclid (six books); Colenso's Algebra; Colenso's Arithmetic; Wrigley's Examples; Sinclair's Questions on the Church Catechism; Riddle's Scripture History; Chepmell's Course of History; Cornwell's Geography; Anthon's Cæsar (notes at the end); Charterhouse Latin Grammar; Contanseau's Prosateurs et Poëtes Français; Delille's French Grammar; Ahn's First German Course; Tiarks' German Grammar; Dr. Ahn's First German Reading Book; Forbes' Hindustani Grammar and Manual; Monier Williams' Grammar (Hindustani), and Hindustani Primer; Heather's Treatise on Mathematical Instruments.	Ainsworth's Latin Dictionary; Cornwell's Atlas; Contanseau's French Dictionary; Black's German Dictionary.	Cæsar, Bell. Gall., one Book. Mathematics is given in this column as being the principal subject of the Department. *Euclid*, Books I.–IV., with deductions. *Algebra*, Surds and Quadratic Equations. *Arithmetic*, Square and cube root, stocks, discount, simple and compound interest. Portions of the French and German Reading Books.	In *Latin* the lesson is construed by about five or six boys chosen at random; and if necessary a second time by others. The remainder of the hour is occupied with parsing or grammar, the boys taking places whenever a mistake is made which the master passes on. The places are entered in a mark book at the end of the hour. A similar method of taking places is followed in *Euclid*. Two to five propositions are prepared out of school generally chosen from two different books. The enunciations are to be known word for word, the demonstrations step for step. The figures are drawn by the Master on the black board as the construction is given, generally with different letters and shape from those in the text book. In *Algebra* and *Arithmetic* the first half of the "up" hour is generally devoted to teaching new work, or to working examples on the board which the class has failed to master, the remainder to the working by the class of examples upon the subject taught in the first half. The "down" hours are spent in working examples generally about equally chosen from books to which the boys have answers, and other sources. These are corrected out of school, and returned to the boys at the next "up" hour of the subject; the marks being entered in the mark book.	None.	Chepmell's History of England; A. Henry VIII. to the end; B. William I. to James I. Riddle's Scripture History; A. Second half of Part I.; B. first half ditto. Sinclair's Questions, about 30 pages, notes and references. First 20 pages of Heather on Mathematical Instruments. Cornwell's Geography; A. Italy, Hindustan; B. France to end of Europe.
FIFTH AND SIXTH CLASSES, 32 BOYS.	Potts' Euclid, edit. 1860; Colenso's Arithmetic, edit. last; Colenso's Algebra edit. 1860; Cæsar (*Oxford* and *Anthon's edit.*); Chepmell's English History; (edit. last); Cornwell's Geography (edit. last); Riddle's Scripture History (edit. 10th) Charterhouse Latin Grammar (edit. 1857); Ahn's German Method, (edit. 1861); Dr. Tiarks' Introductory Grammar (edit. 1861); Delille's French Grammar, (edit. 1860); Prosateurs et Poetes Français by Contanseau, edit. 1862; Hindustani Primer by Monier Williams; Forbes' Hindustani Grammar; Forbes' Hindustani Manual; Rudiments of Hindustani by Monier Williams, M.A.	Cornwell's School Atlas (Black's); Theime's German Dictionary, edit. 1860; Riddle's English-Latin and Latin-English Dictionary, new edition; Contanseau's French Dictionary; Spier's French Dictionary, new edit.	V. Cæsar, Book IV., ch. xxv. to the end, and ch. i. to vi. inclusive. VI. Cæsar, Book IV., ch. i. to xvii. inclusive.	*Cæsar*. Each boy has a portion to translate, and after or during translation questions in grammar are asked. *Euclid* is heard in class, but each boy has a proposition, or part, if the proposition is too long for the whole class to repeat during the hour. *History and Geography.* By questions given on a lesson previously prepared. In geography each boy has his atlas open during the lesson. *Arithmetic and Algebra.* By each boy in the class working every example. When any difficulty occurs, it is explained either individually, or to the class on the black-board as the case may be. In each lesson the number of mistakes are marked, (except in arithmetic and algebra, and then the number of sums done) and added up at the end of such lesson, and the places marked accordingly.	None.	V. Euclid, Books I., II., III., with deductions. Arithmetic to the Appendix in Colenso. Colenso's Algebra, Part I. to the end of chapter viii. English History, from Henry VIII. about 100 pages. Geography, England, Scotland, and Ireland. VI. Euclid, Books I. and II. with deductions. Colenso's Arithmetic to Ex. 64. Colenso's Algebra, Part I. to the end of chapter vi. English History from Edward III., about 100 pages. Geography, from the beginning about 60 pages. Divinity:— Bible (various parts). Prayer Book, do. Sinclair on Catechism, say 50 pages. same for both classes. Delille's French Grammar, about 200 pages. Contanseau's Prosateurs, about 60 pages. German, 5th and 6th classes. Grammar as far as the regular verbs. (Tiarks'); translation 6 pages "Tiarks' Introductory Reader." Williams' Introduction to Hindustani Grammar, gone through almost; transposition from English into Hindustani. Also exercises in Forbes' Manual, and 18 stories from the reading lessons in Forbes' Hindustani Grammar, and words learnt and written in character from Williams' Primer.

1. Authors or Books used (not being mere Books of Reference), with the Editions.	2. Authors or Books used, being merely Books of Reference, including Maps and Illustrations.	3. Authors read in the Year ending with the Summer Holidays 1862.	4. Method of hearing the Form in such Lessons.	5. Authors whose Language has been committed to Memory, and the Quantity of each in the same Year.	6. Authors whose Substance and Matter have been committed to Memory, and the Quantity of each in the same Year.
SEVENTH AND EIGHTH CLASSES, 32 BOYS.					
Cæsar (*Oxford edition*); Henry's 1st Latin Book; Colenso's Arithmetic; Oram's Examples in Arithmetic; Colenso's Algebra, Part I.; Foster's Examples in Algebra; Chepmell's History; Darton's Geography; Potts' Euclid; Watts' Scripture History; Contanseau's Prosateurs; Forbes' Hindustani Grammar; Forbes' Hindu Manual.	Charterhouse Latin Grammar; Chambers' Latin Dictionary; Cornwell's Atlas; Contanseau's French Dictionary; Delille's French Grammar; Ahn's German Method; Tiarks' German Grammar; Rudiments of Hindustani Grammar (M. Williams).	Cæsar II., 1–20; Colenso's Arithmetic, from commencement to end of Chap. V.; Foster's Algebra to end of Simultaneous Equations; Potts' Euclid, Book I.	Each boy translates a small portion of the lesson, errors being corrected by the boys below him, and marks given for each error. The boy at the head of the class always begins, but not always at the first portion of the chapter. Questions in parsing, &c. are afterwards asked of the class in order, and the lesson translated by the master. Any peculiar difficulty in the lesson which has to be prepared for next time is then noticed and explained. In Euclid, a portion is said by each boy, viz., either the whole of a short proposition, or the construction or demonstration of a longer one. Errors are corrected as a rule by the boys in turn, but any boy is liable to be asked to correct, irrespective of his position in the class, should he seem inattentive. History and Geography are heard *vivâ voce*, errrors being corrected in the same manner as in Euclid. In Arithmetic and Algebra a sum is worked on the black board by the master; a similar sum is then worked by the boys. If the majority perform the work correctly, the errors of the rest are pointed out; if most of the sums are wrong, it is worked on the board and explained by the master. A series of sums are then dictated to be worked in the ensuing hours by the boys at their desks. The work of the 7th and 8th classes is nearly the same, one class occupying the time of the master while the other is at work at the desks.		Chepmell's History of England from commencement to Edward III.; Darton's Geography from beginning to end of the British Isles; Watts' Scripture History, chap. vii. to xix.; Potts' Euclid, Book I.
NINTH AND TENTH CLASSES, * 16 BOYS IN EACH.					
Pinnock's History of England; Hogarth's Outlines of Geography; New Latin Reading Book; Henry's 1st Latin Book (*Arnold*); Charterhouse Latin Grammar; Colenso's Arithmetic; Hopkins' Orthographical Exercises; Watts' Scripture History; Potts' Euclid; Foster's Algebra; Delille's Beginner's Own French Book.	Hall's Elementary Atlas; a Dictionary of the words used is added at the end of the Books for translation and composition respectively.	New Latin Reading Book, about 180 lines each half year. The quantity of work in other more important subjects taught in this class is as follows:— Colenso's Arithmetic, about 60 pages each half year; Foster's Algebra, about 19 pages each half year.	*Latin Construing.*—The class being placed as marked at the end of the previous lesson, each boy in his turn is called to read over, then to translate a very short passage. After every possible justice is done to the construing, the parsing is asked in the same order. All questions of construing and parsing are passed regularly down the class, and places are taken according to the answers given and corrections made. *Euclid.*—An hour in the evening and half an hour in school is given to the study and preparation of the new lesson, which in these classes of beginners is usually not more than one of the easiest propositions. Each boy is called to say the whole or about an equal portion of the proposition, following as nearly as possible the words and arrangement of the text. Frequent repetitions are of course necessary, and special care is taken that the definitions, postulates, and axioms are constantly revised. *Arithmetic and Algebra.*—A lesson consists, first, in examining the hour's work prescribed at the close of the previous lesson, pointing out errors, and giving each boy credit in marks for the number of sums he has done. Each boy is required to show a fair amount of work. When qualified to proceed to a new rule, it is explained and illustrated as fully as possible by working out *with* the boys an example of every variety. The operation is compared with the rule, and explained in every step while any difficulty seems to remain. The class is then exercised on this and the preceding rules, and marks given for correct work. The above is a sketch of the method of teaching our more important subjects.	Church of England Catechism and the Collect and Gospel for the week.	Watts' Scripture History, about 50 pages each half year; Pinnock's History of England, about 125 pages each half year; Hogarth's Outlines of Geography, first 64 pages (repeated each half year); Potts' Euclid, first 20 proportions each half year; Charterhouse Latin Grammar to the end of Part I. repeated; Bible and Prayer Book (various parts).

* Taught by the same master.

Methods employed to test individual Proficiency in such "other Subjects."
ORIGINAL.					French and German are taught for two hours a week each by distinct masters. One or two boys on the average learn Hindustani. In the half year about 20 pages of Contanseau's Prosateurs are translated, and Delille's Grammar is read up to about p. 130. In German from 30 to 40 of Ahn's Exercises are written during the half year, and Tiark's Grammar is read to the end of pronouns. Drawing, 2 hours a week for each class.

NOTE.—The work of the two classes is similar, but the hours at which they are with the master are of course different, one class being engaged with work at their desks, or with extra masters, while the other is with the class master. The hours allotted to each subject are however the same in number.

CLASSES IX. AND X., 16 BOYS IN EACH.

Lessons and Compositions during each Half Year.

Lessons.			Compositions.
		IX.	
Sunday		None.	
Monday	9 to 10.	Latin exercise (at desk).	Two Latin exercises and two English orthographical exercises each week.
	10 to 11.	Divinity.	
	11 to 12.	Drawing.	
	2 to 3.	Euclid.	
	3 to 4.	Latin exercise.	
	4 to 5.	Latin translation (at desk).	
Tuesday	9 to 10.	Geography.	
	10 to 11.	Writing.	
	11 to 12.	Arithmetic (at desk).	
	2 to 3.	French.	
	3 to 4.	Arithmetic.

CITY OF LONDON SCHOOL.

LETTER from the REV. DR. MORTIMER, HEAD MASTER of the CITY OF LONDON SCHOOL, to the SECRETARY. CITY OF LONDON SCHOOL. STATEMENT.

City of London School,
October 23, 1862.

DEAR SIR,

YOU have requested me to put on paper the substance of a conversation, which, at your desire, I had with you on Thursday, the 16th inst., at the office of the Public Schools Commission. I think I shall best answer your object by giving you a brief sketch of the history, system, and working of the City of London School, over which I have now presided for nearly 23 years.

The City of London School has its origin in a bequest made by John Carpenter, Town Clerk (then called Secretary) of London, and a representative of the city in Parliament; who dying in the year 1442 left some closes of land, of the then value of about 18 marks per annum, for the education and maintenance of four boys. This land was let on building leases, about the commencement of the present century, by the Corporation of London, the Trustees of Carpenter's bequest; and the Charity Commissioners, on coming into the city, and having their attention directed to the subject, found that four boys were educated at a small expense, a considerable balance of the rent of the estate being otherwise appropriated. On the proposition of Mr. Warren Stormes Hale, now an alderman of London, and chairman of the School Committee from its commencement, it was resolved to found a school, and endow it with the rent of the Carpenter Estate; and a Bill for that purpose having, by the aid of Lord Brougham, passed through both Houses of Parliament and received the assent of the Crown, the Corporation of London gave for the purpose the site of Honey Lane Market, and erected the present building at a cost of about 20,000*l.*, and further bound themselves to maintain for ever upon the said ground * "a school for the religious and virtuous "education of boys, and for instructing them in the "higher branches of literature and all other useful learn-"ing." This school was opened on the 2nd of February, 1837. It is calculated to accommodate about 600 boys. The present number is 626, and the average number of the last few years has hardly varied at all from this total. The school consists of two great divisions, the lower or English school, and the upper or grammar school. To the lower school boys may be admitted as soon as they can read sufficiently to profit by the lessons given, say at the age of seven or eight years. This school is divided into four classes, each taught by its own master in a *separate* room. The assistance of a fifth master, a writing master specially engaged for this purpose, is given every morning to the three junior classes, and in the upper class of this school one of the two regular writing masters attends when needed. The average number of boys in the under school is about 250, of whom about 40 belong to the lowest class, about 60 to the one above it, about 70 to the next class, and about 80 to the highest class of this department of the school. The subjects of instruction are—reading, spelling, writing from dictation, writing, arithmetic up to fractional, English grammar, English history, geography, and the authorized version of the Holy Scriptures, a definite portion being prepared for the Head Master's examinations, and for the general examination of the school in July. But it is further my special instruction to the masters of the several classes, that they are to avoid rote lessons as much as possible, and to make it their object to call the mind into play and teach their pupils to think. Boys pass from the lower into the upper school twice a year according to their proficiency, but many do not enter the lower school at all. All applicants for admission are tested by their answers to a printed examination paper, and classified accordingly. The upper school, which includes all boys upon the books not belonging to the lower, may be set down as containing from 370 to 380 boys, divided into eight classes averaging respectively the lowest about 70 boys, the three next about 60 each, the next about 50, the next about 30, the next about 26, and the head class about 20. The instruction of these classes employs eight regular masters, besides the Head Master's assistant, called the composition master, a ninth, two French masters and two writing masters. The subjects of instruction are generally arithmetic including fractional—*to which great attention is paid*, as it is intended to form the training for a high mathematical standard to be reached in the upper classes,—Latin, Greek, French, physical geography, history, English, Latin and Greek composition, arithmetic, mathematics, writing and bookkeeping. Besides which natural philosophy and elementary chemistry, with a special reference to its use in arts and manufactures, are taught in every class both of the upper and under school by a professor who gives a weekly lecture illustrated by experiments to each of the four divisions in which the school is, for this purpose, arranged; the object aimed at being such an acquaintance with the ordinary phenomena of nature, that no pupil of the City of London School shall look upon the world around him and find it a sealed book; and such chemical knowledge as will enable those who go into the business life of London, to understand something of those processes which are in daily use amongst us. German, drawing, and choral singing are optional studies, taught out of the regular school hours. About 100 boys learn German, 100 drawing, and about 80 choral singing. The school payment for each boy is 9*l.* per annum; drawing is an extra charge, the only extra charge that exists in the school. The school is opened at nine in the morning with reading the Scriptures, and prayers (a short form taken from the liturgy of the Church of England), and is closed again at

* Quoted from the Act of Parliament.

City of London School.

Statement.

three with prayers, *by each master in his own class room.* A rest of half an hour is given in the middle of the day.

There are two half-holidays a week. The hours in school being taken at 29 hours per week; the average given in the upper school to the classics, including divinity and history, is 15½ hours per week; to mathematics, or, in the two lower classes, arithmetic, 9½ hours per week; to French, three hours per week; and to natural science, one hour. The time given to writing and book keeping being equally taken from the classical and mathematical hours, but becoming less in the higher classes, till in the head class these subjects cease to be taught at all. The moves are made on the two subjects of classics and arithmetic or mathematics, and for the fourth, fifth, and sixth classes a certain mathematical standard is absolutely required in order to enable a boy to go on at all with the work of the class. Immediately below the three head classes, and before Greek is commenced, there is a class which branches off, and a choice is given of entering it and not learning Greek; but the number of those thus diverted from the regular course of education is very small, certainly not more than 30 boys per annum, a large portion even of this class passing on in due time to the class above. This may probably be accounted for by the generally practical character of the studies of the school.

The following remarks may be appended to this general statement:—The City of London School is, strictly speaking, a middle class day school on a very large scale. It does not contemplate or superintend boarding arrangements, but leaves these entirely to the parents of pupils. It claims the services of the masters during school hours, but leaves them unfettered out of school hours, to take boarders, or to employ their time as they please. Under its system the boys are engaged with masters during school hours, and lessons must be prepared out of school hours; a diligent boy will occupy in this way from two to three hours per diem. The pupils of the school are received from all ranks of life. As stated in the prospectus, "the object of the school is to furnish a liberal and useful education for the sons of respectable persons, who are engaged in professional, commercial, or trading pursuits, without the necessity of removing them from the care and control of their parents." It is found that the variety of studies gives a great spur to industry, and induces many boys to work who certainly would not work to the same extent under any other system. Many who would never get beyond a moderate classical standard, become excellent mathematicians, or chemists, or natural philosophers. I quote the following extract from the report of the Rev. J. B. Mayor, fellow and tutor of St. John's College, Cambridge, and classical examiner of the school, read in the theatre of the school on the 25th day of July last. Mr. Mayor says, "I wish to notice the points in which it seems to me that your school contrasts favourably with any which I have examined. The first is the flexibility of the system, which opens a fair prospect to ability of every kind, without forcing it into one special channel; and the second, the spirit of hard work which seems to pervade this place, from one end of the school to the other."

It is my opinion, founded on very considerable experience, that the limited time given to classics, in comparison with other public schools, is fully made up by the increased mental power obtained by an acquaintance with many other subjects. At all events it is a fact that the university career of pupils of the City of London School is eminently successful, and the reason seems to be that from being early trained to take up several different subjects of study, they acquire the faculty of readily adapting themselves to the work set before them, and bring to it a large amount of collateral information. For instance, it may be said that an hour a week is but a short time for the study of chemistry and natural philosophy. Very short, I admit, for an untrained mind, but quite enough for a mind well disciplined by arithmetic and mathematics. With this training boys from the head class of the City of London School carried off the Queen's gold medals in the two subjects of mechanical physics and experimental physics, at the examination held in the Science and Art Department of the South Kensington Museum in the year 1861, the first year of their being given; and again this year the Queen's gold medals in the same subjects, two silver medals, and two out of the four Queen's scholarships awarded. I impute this result to a great extent to our excellent training in arithmetic, which in the City of London School is made a discipline of the mind, and is taught by properly qualified masters. I would further observe that in the two highest classes the place of each boy is fixed by the result of a written examination on the work of the term. A facility of writing out is thus obtained, and a guarantee is given that what is learnt is known accurately.

The suitableness of the system to the requirements of the time is shown by the progressive increase of the school, which twenty-three years ago numbered little more than 300 pupils. Now the number might be greater even than it is, but for the limited capabilities of the building.

The same conclusion seems to follow from the fact that during the same time not less than *twenty scholarships*, in addition to eight, forming the old foundation, and called the Carpenter Scholarships, have been given to the school by various benefactors, an amount of patronage that can only be accounted for by a general belief that it was deserved.

I will only add in conclusion that the religious instruction of this school is defined by Act of Parliament, and that in accordance with the requirements of the Act the authorized version of the Scriptures, the Evidences of Christianity, and the Greek Testament are regular subjects of careful study; but that by a liberal interpretation of the Act the school is open to persons of all denominations, and no difficulty of a religious character has ever occurred.

I am, &c.

G. F. W. Mortimer, D.D., Queen's College, Oxford,
Head Master of the City of London School.

Note.—In order to secure attention to the lectures on chemistry and natural philosophy, a small book of questions on the lectures given during the term, with blank pages for the answers, is issued to every boy in the junior classes, and must be by him filled up and submitted to the inspection of the Head Master, when his class is examined. One of these books is appended.

Mountague Bernard, Esq.
Secretary to the Public Schools Commission.

List of Pupils of the City of London School who have proceeded to the Universities of Oxford and Cambridge, commencing with those who took their Degrees in 1857.

1857.

John Robert Seeley, Scholar of Christ's College, Cambridge, 32nd Senior Optimist, bracketed Senior Classic, first Chancellor's Medallist, Fellow of Christ's College.

Thomas Skelton, Scholar of Queen's College, Cambridge, 6th Wrangler, Fellow of Queen's College.

James Henry Bridge, Scholar of Sidney Sussex College, Cambridge, 22nd Wrangler.

F. Lidgell, Pensioner of Trinity College, Cambridge, 35th Wrangler.

1858.

Fred. Charles Wace, Scholar of St. John's College, Cambridge, 3rd Wrangler, Fellow of St. John's College, Mathematical Lecturer of Clare College, Moderator for the January Examination, 1863.

Christian Mortimer, Pensioner of Clare College, Cambridge, 7th Junior Optimist.

1859.

Frederick Brown, Scholar of Trinity College, Cambridge, 2nd Wrangler, Fellow of Trinity College, and Assistant Tutor.

Henry Howard Heaton, Scholar of Corpus Christi College, Cambridge, Poll. Degree.

1860.

Howard Candler, Scholar of Trinity College, Cambridge, 16th Wrangler.

Alexander Mortimer, Scholar of Trinity Hall, Cambridge, 18th Senior Optimist.

Edgar Sanderson, Scholar of Clare College, Cambridge, 4th in 2nd Class of Classical Tripos.

1861.

Wm. Steadman Aldis, Scholar of Trinity College, Cambridge, Senior Wrangler.

1st Smith's Prizeman (being a dissenter, has declined competing for a Fellowship).

Edwin Abbott Abbott, Scholar of St John's College, Cambridge, Port Latin Scholar, Chancellor's Latin Verse Prize, 7th Senior Optimist, Senior Classic, first Chancellor's Medallist, first class in Theological Tripos, with Scholfield's Prize, Fellow of St. John's College.

1862.

Thomas Dale, Scholar of Trinity College, Cambridge, 3rd Wrangler.

Richard Warner, Scholar of Corpus Christi College, Cambridge, 18th Senior Optimist.

John Yates Paterson, Scholar of Clare College, Cambridge, 22nd Senior Optimist, 1st in 2nd class of Classical Tripos.

Under Graduates.

John George Chancellor, Scholar of Clare College, Cambridge.
Edmund Ledger, Scholar of Corpus Christi College, Cambridge.
Thos. Garrett, Scholar of Caius College, Cambridge (died on the 18th of this month).
Jas. Arthur Aldis, Scholar of Trinity College, Cambridge.
Henry John Purkiss, Scholar of Trinity College, Cambridge.
Albert Richard Vardy, Scholar of Trinity College, Cambridge.
David Lindo Alexander, Scholar of Trinity Hall, Cambridge.
John Langford Symes, Pensioner of Corpus Christi College, Cambridge.
Charles Wm. Shickle, Pensioner of Corpus Christi College, Cambridge.
George Saml. Brown, Scholar of Trinity College, Cambridge.
Wm. Henry Rowlandson, Sizar of Corpus Christi College, Cambridge.
Wm. Locke, Scholar of Corpus Christi College, Cambridge.
Thos. Steadman Aldis, Scholar of Trinity College, Cambridge.
Wm. Saml. Beaufoy, Sizar of Trinity College, Cambridge.
Chas. Moseley Nelson, Scholar of Queen's College, Cambridge.
Chas. T. Questel, Scholar of Sidney Sussex College, Cambridge.
Edward Powell, Demy of Magdalen College, Oxford.
Joseph Geo. Clarke, Natural Science Exhibition, Magdalen College, Oxford.

This list includes all who have gone to Oxford and Cambridge from the City of London school during the time specified.

It will be seen that the proportion of those who have not gained scholarships is very small; that only one pupil of the school has failed of going out in honours, and that during the last six years the City of London school has given to Cambridge two Senior Classics, two first Chancellor's Medallists, one Senior Wrangler and first Smith's Prizeman, one 2nd Wrangler, two 3rd Wranglers, one 6th Wrangler, besides many other Wranglers.

The education rather points to Cambridge than Oxford, besides which, one Beaufoy Scholarship every year is confined to Cambridge, and awarded by a Cambridge examiner. It is very common for boys of the head class to compete for the scholarships of the University of London, which the Head Master encourages, in order to keep a high standard and object before them. These scholarships are tenable at Oxford or Cambridge, and only involve the necessity of going on to a degree in the University of London either in Arts or Science. F. Brown, Trinity, Cambridge, T. Dale, do., H. J. Purkiss, do., and E. Ledger, Corpus Christi College, do., are all Mathematical Scholars of the University of London, having gained the scholarships by taking the first place in the mathematical honour list. Thos. Garrett and John George Chancellor, Classical Scholars of the University of London, having gained the scholarship by taking the first place in the classical honour list. H. J. Purkiss, A. R. Vardy, Geo. S. Brown, and Thos. S. Aldis, are, or were, Minor Scholars of Trinity (H. J. Purkis having been since elected to a better scholarship). These minor scholarships, instituted three years since, are the Balliol scholarships of Cambridge. The average number of competitors each year is about forty-five. Of eighteen men elected during the last three years four are from the City of London school. No other school has during these three years sent up more than one successful candidate. The case of W. S. Aldis, Senior Wrangler, and first Smith's Prizeman, and Edwin Abbott Abbott, Senior Classic and first Chancellor's Medallist, 1861, is singular. The four highest honours of the University of Cambridge were never before gained in the same year by men from the same school.

G. F. W. Mortimer, D.D.
Head Master of the City of London School.

APPENDIX Q.

It has been deemed convenient to print the subjoined documents, as throwing light on the history and constitution of the schools to which they relate, and as not being readily accessible. With respect to other schools included in the Commission it is sufficient to refer to the following publications :—

Eton.—The Ancient Laws of King's College, Cambridge, and of the Public School of Eton College. Collected by James Heywood, Esq., F.R.S., and Thomas Wright, Esq., M.A., F.S.A. London, Pickering, 1844. The Statutes of Eton College are also printed in the Fourth Report of the Select Committee on the Education of the Lower Orders, H.C., 1818.

Winchester.—The Statutes of Winchester College. Printed by the desire of the Commissioners under the Act 17 & 18 Vict. c. 81. London, Eyre and Spottiswoode, 1855. Ordinances and Statutes framed or approved by the Oxford University Commissioners in pursuance of the Act 17 & 18 Vict. c. 81. Oxford, Clarendon Press, 1862.

Westminster.—Statutes of the Collegiate Church of St. Peter, Westminster. Printed in the Appendix to the First Report of the Cathedral Commission. London, Eyre and Spottiswoode, 1854.

Charterhouse.—Report of Mr. Skirrow to the Charity Commissioners, H.C. Parliamentary Paper 9, 1857. (The charter, statutes, and Acts of Parliament relating to the Hospital have been printed for the use of the Governors.)

Harrow.—Charter, Orders, and Rules to be observed and kept by the Governors of the Free Grammar School of Harrow-on-the-Hill, founded by John Lyon, in the year of our Lord 1590. London, printed for John Morris, Sudbury, Harrow, by J. C. Bridgewater, South Molton Street, Oxford Street, 1853.

ST. PAUL'S.

I.—Ordinances of Dean Colet relating to St. Paul's School.*

Prologus.

John Colet, the son of Henry Colet, Deane of Paules, desyryng nothing more than educacion and bryinging upe of children in good manners and literature, in the yeare of our Lord A.M. five hundrith twelff, buylded a scole in the east ende of Poules Churche Yode for cliij, to be taught free in the same, and ordeyned there a maister and a surmaister, and a chapelayn, with sufficient and perpetuall stipendis ever to endure; and sett patrons and defenders, gournors, and rulers of that same scole, the most honest and faithfull felowship of the Mercers of London, and for because nothyng can contynu long and endure in good ordre without lawes and statuts, I, the said John, have expressed and shewed my mynde what I wolde should be truely and diligently obsved and kept of the school-maister and surmaist and chapelayn, and of the Mercers gournors of the schole that in this boke may appere to what intent I founde this scole.

Capitulum primum de magistro primario.

In the gramer scole founded in the Churche Yerde of Poules, at the est ende, in the yere of our Lorde 1512, by John Colet, deane of the same churche, in the hono of Christ Ihu in puritia, and of His Blessed Mother Mary, in that school shall be, first, an high maister. This high maister, in doctrine, lernying, and techying shall direct all the scole. This maister shall be chosen by the wardens and assistence of the Mercery, a manne hoole in body, honest

* Printed, with the Amending Ordinances, from a copy furnished by the Mercers' Company. See the Answers of the Mercers' Company, Part II., 1—6.

and vertuose, and lerned in good and clene laten l'rature, and also in Greke, if such may be goten; a weddid main, a syngleman, or a preste that hath no benefice w^th^ cure nor benefice that may lett his due busynes in the scole.

The Mercers shall assemble togither in the scole-house, w^th^ such advise and counsell of well l'rature and lerned men as they can gete. They shall chose this maister, and gyve unto hym his charge, saying unto hym on this wyse,—

Sir, We have chosen you to be maister and techer of this scole, to teche the children of the same, not all only good l'rature, but also good maners, certyfying you that it is no rome of continuaunce and p'petuyte, but upon your deuty in the schole; and every year at Candlemas, whanne the Mercers be assembled in the scole-house, ye shall submitt you to oure examinaccion, and founde doying your duytie accordynge, ye shall continu; otherwise, reasonably warned, ye shall content you to departe. And you, of your part, not warned of us, but of yo^r^ mynde, in any season willying to departe, ye shall give us warnying 12 monethes before, w^th^oute we can be shortlyer well provided of another.

Also, beyng maister, ye shall not absent you but upon license of the surveyours for the tyme beyng.

Also, if any contro'usy and stryff shall be betwixt you and the surmaist or the chapelyn of the scole, ye shall stande at the direccion of the surveyors beyng for that yere.

And if the chosen maister will promyse this, thenne admytt hym and name hym to it, and stall hym in his sete in the scole, and shew him his lodgeyng, that is to say, all the cellers beneth, and the hall, the keychyn, and buttry, and over that all the holle story of chaumbers, and in the house roffe, and lytle myde chamber, and the galary in the south side. As touchyng all the story of chaumbers next underneath the galaryes, he shall no thyng meddell withall, and they shall give hym the implements of his housse by indenture.

All these lodgeyngs he shall have free, withoute any payment, and in this lodgying he shall dwell and kepe householde in his power. His wages shall be a marke a weke, and a lyne gowne of iiij nobles delyverd in clothe.

His absence shall be but onys in the yere, and not above xxx dayes, which he shall take connecting or dismission.

If the maister be syke of sykeness incurable, or falle into such age that he may not convenyently teche, and hath bene a man that long and laudably hath taught in the schole, thanne let another be chosen; and by the discrete charitie of the Mercery, let there be assigned to the olde maister a reasonable lyvyng of *xl.* or otherwise, as it shall conveynent, so that the olde maister, after his longe labour, in nowise be left destitute.

If the maister be syke of sykeness curable, yet nevertheless I will he shall have his wages; and in such sykeness, if he may not teche, let him reward the undermaster for his more labour somewhat according.

If the undermaister be in l'rature and in honest lyff according, thanne the high master's rome vacant, let hym be chosen before another.

The high maister shall have the tenement in Stebinheth, now in the handys of Christofer Middilton, to resorte unto, which tenement the Mercers shall mayntayne and repaire.

"There shall be a surmaist, also sum manne vertuose in levyng and well lettered that shall teche under the maister as the hye maister shall apoynte hym, som syngle man, or wedded, or a priest, that hath no benefice w^t^ cure nor su'yce that may let his due diligence in the scole. This surmaister the high maister shall chose as often as the rome shall be voyd, a manne hoole in body, and whan the high maister hath appointed him upon one, he shall call to the scole the surveyors of the scole, and before them he shall saye to the surmaister on this wyse,—

"Sir, Before theis, my maister here, the surveyours of this scole, I shew unto you that I have chosen you to be undermaister of this scole, and to teche alway from tyme to tyme as I shall appoint you, and supply my rome in my absence whannever it shall be graunted me by my maisters, the mercers, wardens, and surveyours, and for suche more lab' in my absence, I shall some what so to you as my maisters here shall thynke best."

Thanne the surveyors shall exorte the surmaister diligently to do his duty, and shall say unto hym in this wise:—

"Your rome is noo p'pretuyte, but accordynge to your labour and diligence ye shall contynue, otherwise, founde not accordynge, and reasonably warned of us, ye shall departe; yf it shall be soo that at any tyme ye will departe of y^r^ ouen mynde, ye shall give us halff a yere warnyng,

"If any controversy be betwixt you and the high maist' ye shall stande at our direccion on eny thyng.

"If he will p'myse this, thanne let the mercers approve the eleccion of the surmaister and assigne him his logeyng in the Olde Chaunge.

"His wages shall be *6s. 8d.* a weke, and lyvey gown of iiij nobles delyvered in clothe, he shall goo to comyns w^t^ the high maister, if he may convenyently.

"He shall be absent in all the yere not above xxx. dayes, and yet than for cause reasonable and with license of the high maist' and also of the surveyours.

"In sekeness curable as axis, or suche sekeness for a tyme, he shall be tolerated and have his full wages.

"If after his coming he fall syke into sekeness incurable, as lep'ry or French pox, or after his lenge lab^r^ in the scole fall into age impotent, thanne I comytt him to the charytie of the mercers, they of the cofur of the scole to p'vide hym in lynging as it may be possible, praying theym to be charitable in that behalf.

"Of both Masters at once.

"If bothe maisters be seke at onys, thanne let the scole seasse for that whyle.

"If there be such sykenesse in the city contagious that the scole cannot continue, yet nevthelesse both maisters shall have their wages, beyng alway redy for to teche.

"Neyther of these maisters shall take office of sec'to shipp on* proctorshipp, or any such other besyness which shall let theyre diligence and their necessary laber in the scole; yf they do, and warned lawfully, yf they will not sease from such besyness, thanne let them be warned to depart.

"Let the high maist' see that the scole be kept clene by the pore childe, and be swept ev'y set'day, and also the ledys, and from tyme to tyme to call upon the mercers for necessary repracons.

"The Chaplin.

"There shall be also in the scole a priest that dayly as he can be disposed shall syng masse in the chapell of the scole, and pray for the children to prosper in good lyff, and in good l'rature to the hono' of God and our Lorde Christe Jesu at his masse; whanne the bell in the scole shall knyll to sacrying, thanne all the children in the scole knelying in their settis shall w^t^ lift upp handis pray in the time of sacrying. After the sacrying whanne the bell knyllith agayn, they shall sitt downe agayn to their lernynge.

"This priest, som good, honest, and virtuouse manne, shall be chosen from tyme to tyme by the wardens and assistants of the mercery; he shall also lerne, or yf he be lerned, himself to teche in the scole yf it shall seme convenyent to the hye master, or ellis not.

"He shall have no benefice w^t^ cure, nor ser'vce, nor noo other office nor occupation, but attende all only upon the scole. He shall teche the chyldren the cathechysm and instruction of the articles of the faith and the x commandments in Inglysshe.

"His wages shall be viij li by yere, and a lyney gown of xxvj s. viij d., delyvered in clothe.

"His chaumber and lodgying shall be in the new house in the Old Chaunge, or in the maister's lodgyng, as shall be thought best.

"He shall not have his rome by wrytyng or seals, but at libertie accordyng to his desiryng.

"His absence may be onys in the yere, if it be nede, as it shall seme best to the surveyo's of the scole for that yere, and thanne with license asked and obteyned of the said surveyo's.

"In sykeness he shall be nothing abridged of his wagis, but let it be sene that he be hole in body whan he is chosen.

"If he fall to unthryftyness and mysbehaucys aft^r^ full warnyng let him be repelled and another chosen within 8 dayes, or as soon after as can be.

"The Children.

"There shall be taught in the scole chyldren of all nacionis and contreys indifferently to the number of cliij,* according to the number of the setys in the scole.

"The maist' shall admytt these children as they shall be offered from tyme to tyme, but first see they can their cathechysm, and also that he can rede and wryte competently, ellis let hym not be admytted in noo wise.

"A childe at the first admyssion onys for ever shall paye *4d.* for writing of his name. This money of the admyssions shall the pore scholer have that swepith the scole and kepith the scole clene.

"In eu'y forme one principall childe shall be placed in the cheyre p'sident of that fourme.

"The children shall come into the scole in the mornyng at vij of the clokke both wynter and somer, and tarry there unlott, and retourne again at oone of the clokke and dep'te at v, and thryse in the day prostrate they shall saye the prayers w^t^ due tract, and pausying as they be conteyned in

* "Privileged beggars especially for Hospitals." Carlisle's Endowed Grammar Schools, ii., 74. † 133.

a table in the scole, (that is to say) in the morning, at none, and at evenynge.

"In the scole in noo time in the yere they shall use talough candles in noo wise, but all only wex candell at the costs of their friends.

"Also, I will that they bring no mete, nor drynke, nor botells, nor use in the scole no breakfasts nor drynkyngs in the tyme of lernyng in no wyse; if they nede drynke let them be provided in some other place.

"I will they ose no cockfightyng nor ryding aboute of victory, no disputyng at Saint Bartlemew's, which is but folysshe babelying and losse of tyme.

"I will also they shall have no remedyes; yf the maister grannte any remedie he shall forfett xls. tociens quociens, except the Kynge, or an Archbishop, or a Bishop, present in his own person in the scole, desyre it.

"All theis children shall ev'y Childemas Daye come to Poule's Church and here the childe bishopp sermon, and aft be at high masse, and ech of theym offer 1*d.* to the childe bishopp, and w^t^ thym the maisters and surveyors of the scole.

"In gen'all processions, when they be warned they shall goo tweyne and tweyne together, soburly, and not syng out, but saye devotely, tweyne and tweyne, vij psalmys with the Latany.

"To theire vryn they shall go thereby to a place appoynted, and the pore childe of the scole shall see it conveyed away from tyme to tyme, and have the avayle of the uyn; ffor other causes, if nede be, they shall go to the watersyde.

"If any childe, after he is receyved and admytted into the scole, go to any other scole to lerne there after the manner of that scole, thanne I will that such childe for no manners such shall be hereaft' receyved into oure scole, but goo where hym lyst, where his frendes shall thynke shall be better lernyng; and this, I will, be shewed unto his ffrendes or other that offer hym at his first presentyng into the scole.

"*What shall be taught.*

"As towchyng in the scole, what shall be taught of the maisters and learned of the scolers it passeth my will to devise and determyn in particular, but in gen'al to speake and somewhat to say my mynde, I woulde they were taughte alway the good l'rature both Laten and Greke, and good aucto's, such as have the very Romayn eloquence joyned with wisdom, specially Christon aucto's that wrote theire wisdom w^t^ clene and chaste Latin, either in verse or in prose, for my intent is by this scole sp'ially to increase knowledge and worshipyng of God and our Lorde Christ Jesu and good Christian life and manners in the children, and for that intent I will the children lerne firste, above all, the cathechysm in Inglysshe, and aft' the accidence that I made, or some other, if any be better to the purpose, to induce children more speedily to Latin speche, and thanne institutum Christana Homines, which that learnede Erasmus made at my request, and the boke called Copia of the same Era's, and thanne other aut'ors Cristain as Laetancius prudencius, and proba, and seduluis, and Incuencus and Baptista Mantuamus, and suche other as shall be thought convenyent and most to purpose unto the true Laten speche; all barbary, all corruption, all Laten adulterate, which ignorant blinde folye brought into this worlde, and w^t^ that same hath disteyned and poyesend the olde Laten speche and the very Romayne tonge which in the time of Tully, and Salust, and Virgill, and Terence, was used, which also Saint Jerome, and Saint Ambrose, and Saint Justen, and many other holly docto's lerned in the tymes.

"I say that fillthyness and all suche abusyon whiche the latt blynde worlde brought yne, which more rather may be called blotterature thanne literature, I utterly abbanysshe and exclude out of this scole, and charge the maisters that they teche alway that is the best, and instructe the children in Greke and Laten, in redying unto theym such auctours that hath wysdom joyned with pure chast eloquence.

"*The Mercers Charge.*

"The honorable Company of Mercers of London, that is to say, the maister and all the wardens and all the assistence of the ffelysshipp, shall have all the cure and charge, rule and governance of the scole, and they shall ev'y yere chose of their company ij honest and substantial men, called the surveyors of the scole, which, in the name of the hoole felyshipp, shall take all the charge and busyness about the scole for that one yere.

"They shall ov'see and receyve all the landes of the scole, and see them repayred fro tyme to tyme by theire officers; and suche officer as they appoynte to be renter or to other busyness of the scole for his more labo' in the scole busynes, I will he have xx*s.* a yere and a gowne, price xiij*s.* iiij*d.*

"The surveyors of the scole shall come into the scole six dayes before Christennes, vj dayes before Ester, vj dayes before Saint John Baptist day, and vj days before old Meghelmas, and pay the high maister and the surmaister, the prest their quarter wages, and at the latter end of the yere their lyverys in cloth, and ooners in the yere, they shall give accompte to the maisters, wardens, and assistence of the ffelyshipp.

"Theire accompte shall be about Candlemas,* thre dayes afore or thre dayes after Candlemas daye In that daye appointed shall be assembly and a lytell dyner ordeyned by the surveyors, not exceeding the price of iiij nobles.

"In that day they shall be a reckonyng all the estate of the scole and see th' accompte, and discharge the olde surveyour, and to the younger chose an other; and in that day, after the accompte, they shall give—

"To the maister warden, a noble,† if he be p'sent, or ells not;

"To eche of the other wardens vs. [5*s.*], if they be present, or ellis not;

"To the surveyors, eche of theym, xls. [40*s.*] for their labours for that yere;

"For their rydying and visytyng of their lands, to ach of them, xls. [40*s.*] yf they ryde."

"The clerk of the Mercery shall inacte all thyngs that day, and have for his laboure iij*s.* iiij*d.* [3*s.* 4*d.*];

"See that the steward bryng yn his court rolles or he have his fee;

"See that the baylyffs renew their rentalls every v yere;

"Let not the landes of the scole but by the space of fiyve yeres;

"That is spared that day in rewardes and charges let it be put in the treasurye of the scole;

"They shall dyvers tymes in the quarter com to the scole and see how they do.

"Every yere at the foote of the accompte all ordynary chargis done, the overplus of money which at this day is externed, this—

"I holly give to the ffelyshipp of the Mercery to the mayntayning and suppertyng and repayng of all that longith to the scole fro tyme to time.

"And all be it, my mynde is that they shall have this surplusage for the'ntent abovesaid. Yet, neverthelesse, I will the said surplusage as muche as shall be spared of it above reparations and casualties at ev'y accompte be brought and put yn a coffur of iren geven of me to the Mercery stending in their hall. And these, from yere to yere remayne apart by itself that it may appere how the scole by the owen self mayntenyth itself, and at length over and above the owen lyvelod yf the said scole shall growe to any further charge to the Mercery that then also that may appeare to the laude and prayse and merit of the said ffellyshipp.

"*Liberty to declare the Statutes.*

"And notwithstanding these statutes and ordinances before written, in which I have declared my mynde and will, yet because in tyme to come many thyngs may and shall survyne and growe by many occasions and causes which at the makying of this boke was not possible to come to mynde,

"In consyderyng the assured truthe and circumspect wisdome and faithful goodness of the most honest and substantiall felyship of the Mercerye of London, to whom I have comytted alle the cure of the scole, and trusting in theire fidelitie and love that they have to God and man and to the scole, and also believyng verely that they shall alway drede the grete wrath of God,"

"Bothe alle this that is saide and all that yet is not saide which hereafter shall come into my mynde while I lyve, to be said, I leve it hooly to their discretion and charytte, I mean of the wardens and assistants of the fellowship w^t^ such other councill as they shall call unto theym, good lettered and lerned menne."

"They to add and dimynyshe vnto this boke, and to supply in it every defaulte, and also to declare in it every obscuritie and darkenes, as tyme and place and just occasion shall requyre, callyng the dreadfull God to loke upon them in all such busynes and exhorting them to fear the terrible judgment of God whiche sethe in darkness, and shall rendre to evy man according to his workes, and finally praying the grete Lorde of Mercy for theire faithful dealyng in this matter, now and always to sende unto theym in this worlde much welth and prosperyte and after this lyff much joye and glory."

Johannes Colet fundator novæ scholæ manumea propria.

II. Amending Ordinances made by the Court of Assistants of the Mercers' Company.

Vicesimo quarto die Junii, A.D. 1602.

Whereas John Colet, dean of the Cathedral Church of St. Paul, in London, hath nominated and appointed us, the master, wardens, and assistants of the Company of the Mercers of the City of London, to be patrons and governors of Paul's school, by him erected and founded; and for the better ordering thereof hath made certain lawes and ordinances in a book under his own hand, and hath among other things thereby given authority unto us, the said wardens and assistants, with such other learned counsel as we shall call unto us, to add and diminish unto the said lawes and ordinances, and to supply in them every defect, and also to expound and declare such of the said ordinances which shall seem obscure and doubtful as time and place and just occasion shall require.

Now, forasmuch as of late scruple and doubt hath been made upon sundry the said ordinances about the right understanding thereof, whereby great suit and controversy hath arisen and been between us and the late high schoolmaster of Paul's school John Harrison, with the surmaster and usher, to our great charge, vexation, and trouble, and for that some of the said ordinances are thought fit to be altered and some defects therein likewise to be supplied.

Therefore, for avoiding further inconvenience hereafter, we, the said master, wardens, and assistants, with the advice and counsel of Thomas Flemyng, Esqre., serjeant at law and solicitor general to our sovereign lady the Queen's most excellent Majesty that now is, and Thomas Foster, Esqre., counsel at law, well lettered and learned men, being call thereunto, do now ordain and further make explanation of the said laws and ordinances as hereafter followeth, viz.:—

Imprimis, whereas, by an ordinance under this title, viz., Capitulum primum de magistro primario, it is ordained and provided that the master every year at Candlemas, when the Mercers be assembled in the school house, shall submit him to their examination, and found do his duty to continue, otherwise reasonably warned to depart. We do ordain and declare that the said ordinances shall from henceforth be expounded and understood that the Mercers (that is to say) the master, wardens, and assistants of the Mystery of Mercers in London, or the more part of them then assembled in the school house, shall then and there yearly have full power to examine the high master touching the profiting of the scholars in literature and good manners, his demeanor and conversation and the due observation of the founder's ordinances. And that the high master shall not only submit himself to such examination, but also yearly at the same time yield and resign up his place into their hands as was used in the lifetime of the founder to their predecessors. And if the master shall then by the approbation of the said master, wardens, and assistants of the said Mystery of Mercers or the most part of them be found to have done his duty he shall continue, otherwise in case he shall then by their judgments be found defective within six months next after warning to him given by the said master, wardens, and assistants or the most part of them, he shall quietly depart.

Item.—We do ordain that the surmaster and usher yearly about Candlemas, when the said master, wardens, and assistants of the Mercers or the most part of them be assembled in the school as aforesaid, shall resign their places into the hands of the said master, wardens, and assistants of the Mercery there assembled and being then found to have done their duties they shall continue, otherwise within six months after warning given, they shall quietly depart.

Further, whereas there are other statutes under these titles, viz., "Capitulum primum de magistro primario," the surmaster and the chaplin, that they shall have yearly livery gowns of four nobles delivered unto them in cloth. We do ordain that the said master, surmaster, and usher (instead of the chaplin) shall have the said liveries in cloth, or four nobles a piece yearly in money, in lieu of the said cloth, or such further allowance in money as the master, wardens, and assistants of the Mercers for the time being, or the most of them, shall think fit.

Further, whereas there are other statutes under these titles, viz., "Of both Masters at once," and "The Children," that a poor child to be appointed by the master shall sweep the school and the leads, and call upon the Mercers from time to time for necessary reparations, and that the said poor child shall have 4*d.* at the admission of every scholar, and the avails of the scholars' urine.

We do ordain that from henceforth some poor scholar or poor man (to be appointed from time to time by the high master) shall do the same business, and shall have such allowance and avails for his labour as are limited to the poor child by the founder.

Further, whereas there is a statute under this title, viz., "The Chaplain." That there shall be a priest or chaplain to sing mass daily in the chapel of the said school, and to pray that the children may prosper in good life and good literature, to the honor of God and our Lord Christ Jesu, and that the same priest shall teach in the school, if it shall seem good to the high master. We do ordain and establish that there shall be from henceforth an under usher instead of the said priest, who shall teach in the school by the direction of the high master, and shall be chosen from time to time by the master, wardens, and assistants of the Mercery, or the most part of them, for the time being, and continue there so long time as the said master, wardens, and assistants, or the most part of them, for the time being, shall think fit.

We do further ordain, that no other prayers or ceremonies shall be used in the school, but such only as the laws and statutes of the realm of England for the time being do or shall permit and allow.

Further, whereas in another ordinance, under the title, viz., "The Children," it is said that a child, at the first admission, once for ever, shall pay 4*d.* for writing of his name. This ordinance shall be expounded that every child that shall be admitted to be taught in the said school shall have his teaching free during all the time of his continuance there until his departure, without any further charge to be imposed upon him or his friends by the high master, surmaster and usher, or any of them, over and above 4*d.* at his first admission to the poor scholar or poor man of the school as aforesaid.

Further, whereas by another ordinance under the same title, viz., "The Children," it is provided that the children shall come into the school in the morning at 7 o'clock, both winter and summer, and tarry until 11, and return again at 1 of the clock, and depart at 5.

We do ordain, that the high master, surmaster, and usher shall be tied to the same hours, and in case any or either of them shall be absent from the school over and above 30 days in one whole year, to be taken continuation or division by the high master, and without the license of the surveyors and high master, by the surmaster, and without the consent and license of the surveyor for the time being by the usher, that then, for every such absence contrary to the limitations aforesaid, the said master, surmaster, and usher shall forfeit and pay so often as they or any of them shall offend contrary to the form aforesaid, the sum of 6*s.* 8*d.* for every whole day, and 12*d.* for every hour that they or any of them shall respectively be absent from the said school more than the said 30 days as aforesaid, the same penalties to be defaulked out of his or their wages respectively which shall offend.

Item. Whereas it is ordained in the title, viz., "The Mercers," that in the day of the giving up of the surveyor's account, shall be a little dinner not exceeding the price of four nobles, forasmuch as divers learned men are usually there at that time to appost the scholars for the better information of the said master, wardens, and assistants of the profitting of the scholars in learning, and for that the assistants are now many in number, and for that the rates and prices of victuals are now grown very great in respect the same were at the time of the making of the said ordinance, we therefore do ordain, that from henceforth so much shall be allowed towards the said dinner as the master, wardens, and assistants of the Mercery, or the more part of them, for the time being, shall in their discretion think fit, so as the same be expended in frugal manner without excess.

Further, whereas in the same title, viz., "The Mercers," there is this caveat that the lands of the school should not be let but by the space of five years. It is now found by experience very prejudicial and not for the benefit of the school to let out the lands thereof for so short a time, we do therefore ordain and establish that, from hencefort, it shall be lawful to the master, wardens, and assistants of the Mercery, or the more part of them and their successors, for or in respect of new buildings upon any of the lands to be leased respectively or repairing of the same, or for the better manurance and bettering of the same, and continuing the same together in one hand and in heart and strength, or any such like good or valuable consideration, to demise any of the lands or tenements appertaining to the same school heretofore usually demised by lease and not by copy of court roll, as they and their successors shall from time to time in their wisdoms and discretions think to be for the most benefit of the school, so as the same lease or leases be made with reasonable conditions and covenants on the lessee, his executors, administrators, and assigns, their part to be performed, and so as the same lease or leases do not exceed 21 years, and so as the same lease or leases be made in possession and not in reversion, and so as the same be not without impeachment of waste, and so as the yearly rents of the same be not thereby diminished but increased if conveniently and reasonably the same may be.

Further, whereas by the said ordinances the Founder doth limit and appoint salaries and fees to the high master, surmaster, and others, as followeth, viz.:—to the high master, 13*s.* 4*d.* a week; to the surmaster, 6*s.* 8*d.* a week; to the chaplain, 8*l.* a year; to the master and wardens of the Mercers, 21*s.* 8*d.*; to the surveyors, 4*l.* per annum; to the surveyors for visiting the lands, 4*l.* per annum, if they ride; to the steward, 40*s.* per annum; to the clerk of the Mercers, 3*s.* 4*d.*; to the renter of the school, 33*s.* 4*d.* per annum; to the bailiffs, 40*s.* per annnm.

Forasmuch as the lands and tenements belonging to the school do now yield double as much rent as they did in the Founder's lifetime, and for that all things necessary are now grown to a far dearer rate than they were at the first foundation of the school, we do therefore ordain and establish that as well the salaries and fees appointed to the schoolmaster, usher, and chaplain, as all other the fees beforementioned appointed to be paid by the Founder, shall from henceforth be doubled according to the improvement of the rents as aforesaid, the same increase of salaries and fees to continue until such time as the master, wardens, and assistants of the Mercery, or the more part of them assembled in the school-house, shall by reason of the fall of rents or other just consideration, be occasioned to abate the same.

Item.—Whereas there is an ordinance in the same title, viz., "The Mercers," that the surplusage of money which shall remain upon every account shall be put into an iron chest standing in the Mercers' Hall, and there remain from year to year apart from itself, that it might appear how the school by the ownself maintaineth itself. It is now ordained that the same surplusage or such part thereof as the master, wardens, and assistants of the Mercery and their successors shall think fit, shall from henceforth be employed either in exhibitions to poor scholars proceeding from Paul's school to the universities or in fellowship, or else lent out to poor young men of the said Company of Mercers upon good security at the will of the said Mercers for the repayment thereof as to the said master, wardens, and assistants, or the more part of them, shall from time to time be thought most necessary for the good of the school.

Finally, we ordain and establish that forasmuch as in the making of these ordinances and explanations the chief care of the parties called hereunto was and is to have the true intent and meaning of the Founder duly executed and performed in all things as time, place, and occasion doth or shall permit or require, that therefore all acts, ordinances, and explanations heretofore made (if any such be) other than by the said Founder himself, shall from henceforth be utterly void and of non effect.

III. DEED of CONVEYANCE of ESTATES in BUCKS from DEAN COLET to the MERCERS' COMPANY.*

To all faithful people of Christ to whom this present writing indented shall come, John Colet, Doctor of Laws, Dean of the Cathedral Church of Saint Paul's, London, greeting in the Lord, know ye that I, the aforesaid John Colet, have given, granted, and by this my present deed indented have confirmed unto the wardens and commonalty of the Mystery of Mercers of the City of London:

The manor of Vache, in the county of Buckingham, and also four messuages, 100 acres of land, 20 acres of meadow, 100 acres of pasture, 10 acres of wood, and 40*s.* yearly rent, with the appurtenances in Aston Clinton, Wendover, and Sherrington, 4 messuages, 4 tofts, 390 acres of land, 22½ acres of meadow, 15½ acres of pasture in Weston Turville, Bedgrove, Bierton, and Aylesbury; the manor of Wootton and Ham, with the appurtenances, 200 acres of land, 60 acres of meadow, 200 acres of pasture, 20 acres of wood, and 20*s.* rent, with the appurtenances in Wootton, Ham, and Waddesdon; and the manor of Bury, with the appurtenances, 2 messuages, 200 acres of land, 25 acres of meadow, 8 acres of pasture, 60*s.* rent, and 32 quarters of mixed corn in Wengrave, Rolsham, and Bourton, and the manor of Weston Turville, also called the manor of Hyde, 200 acres of land, 200 acres of meadow, 200 acres of pasture, and 20*s.* rent, with the appurtenances in Weston Turville, Halton, and Broughton, and 22 acres of land, 2 acres of meadow, called Wendover lands, lying in the parish of Weston Turville aforesaid; to have and to hold all the aforesaid manors, messuages, lands, tenements, and other premises, with the appurtenances aforesaid, to the wardens and commonalty of the Mystery aforesaid, and their successors for ever, for the continuatior of a certain school in the churchyard of the Church of Saint Paul's for boys in the same school in good manners and literature to be taught, and for the support of one master and one usher, or two ushers of the same, and other things necessary there to be done according to the ordinances of me, the aforesaid John Colet, my heirs or escheators, thenceforth thereafter to be done of the Chief Lords of the Fee by the services thenceforth due and of right accustomed; and I, the aforesaid John Colet, for myself and my heirs, will warrant and for ever defend the aforesaid manors, tofts, lands, and tenements, and other the premises, with the appurtenances, against the Abbot of the Monastery of the blessed Peter at Westminster, and their successors: And also know ye, that I, the aforesaid John Colet, have appointed, made, and ordained, and in my place by these presents have put

* Printed from a copy furnished by the Mercers' Company.

my beloved in Christ Maurice Hawkbrook and William Newbold, my true and lawful attorneys, on this behalf jointly and severally to enter upon the manors, tofts, tenements, lands, meadows, pastures, woods, and rents, with their appurtenances, and all persons occupying the same manors, tofts, lands, tenements, and other the premises, from thence to put out and expel, and full and peaceable possession and seizen is from them taken and had, the aforesaid wardens and commonalty of the Mystery aforesaid, either for them on their part or their attorney or attornies, full and peaceable possessions and seizen of and in all and singular the aforesaid manors, tofts, tenements, lands, meadows, pastures, woods, rents, and appurtenances, for me and in my name to deliver seizen according to the form, tenor, and effect of this my present deed indented, ratifying and confirming firmly and absolutely all and whatsoever my aforesaid attorneys in my name shall do or otherwise cause to be done in the premises by these presents: In testimony of which I have placed my seal to one part of this my present deed indented. Given the 12th day of the month of July, A.D. 1511, and in the 3rd year of the reign of King Henry the 8th, after the Conquest.

IV. Will of Dean Colet.*

In the name of God, Amen.—On the 10th day of the month of June, A.D. one thousand five hundred and fourteen, and in the 6th year of the reign of King Henry the VIII., after the conquest, I, John Colet, Doctor of Holy Theology, Dean of the Cathedral Church of Saint Paul's, London, Citizen and Mercer of London, and Freeman of the same city, son and heir of Sir Henry Colet, Knight, Citizen whilst he lived, and Alderman of London, do compose, make, and ordain this my present testament as to the disposition of all and singular messuages, lands, and tenements, and other my hereditaments under written, with their appurtenances, within the city of London, after the manner which follows. Imprimus, I bequeath and recommend my soul to God Omnipotent, my Creator and Saviour, and to the Blessed Mary, His Mother. Item, I, the aforesaid John Colet, give and bequeath to the wardens and commonalty of the Mystery of the Mercery of the city of London, all my messuages, lands, tenements, and other hereditaments under written, viz., one messuage with shop, cellars, solars, and all other the appurtenances, situate, lying, and being in Soper Lane, in the parishes of Saint Anthony and Saint Pancras, in the ward of Cordwainer Street, London, between the lane called Soper's Lane on the east part, and the tenement of the prior and convent of the hospital of the Blessed Mary, of Elsyng, London, and the tenement appertaining to the parish church of St. Mary of Colechurch on the west part, and the tenement appertaining to the church of the Blessed Mary at London on the south part, and the hall or entry there leading from Soper Lane aforesaid unto the hinder gate of the messuage of the said prior and convent on the north part, and my said messuage contains in land lengthwise in the east part thereof, near Soper's Lane aforesaid, between the north and south, one hundred and seventeen feet and one inch, and in breadth in the north part near the said hall or entry, between the east and west, eighty-six feet and five inches of assize, and it contains in length, in the south part thereof, by three several frontispieces or three several corners ninety-three feet and four inches of assize within, without the back, which back of the said three fronts contains in length, by the south, twenty-nine and a half feet three inches of assize, and the middle frontispiece or corner thereof contains, in the south, twenty-five feet of assize, and the anterior frontispiece or corner thereof contains in length, by the south, thirty-nine and a half feet of assize, which make the said length of ninety-four feet three inches, and the interior or back of the frontispieces contains in breadth, at the west end thereof, forty-four feet three inches of assize, and the middle frontispiece thereof contains, in breadth, at the west end, towards the south, more than the said interior frontispiece by twenty-six feet seven and a half inches of assize, and the anterior frontispiece thereof contains, in breadth, at the west end thereof, towards the south, more than the middle frontispiece by fourteen feet and two inches of assize. And also all those my two messuages, with their appurtenances, situate and lying in the parish of Saint Magnus the Martyr, in the ward of Bridge, London, whereof one messuage thereof is situate and lies between the high street there, called Bridge Street, on the east part, and the tenement appertaining to the parish church of Saint Magnus aforesaid on the west and south parts, and the high street there, called Thames Street, on the north part, and contains in length, in the east part thereof near the said street called Bridge Street, between the south and north, ten feet and five inches of assize, and in length in the west part thereof, between the south and north, ten feet three inches and a half of assize, and in breadth, at the north end near Thames Street aforesaid, nine feet and eight inches of assize, and in breadth, at the south end thereof, between the east and west, nine feet seven inches and a half of assize; and the other messuage thereof is situated and lies in Bridge Street aforesaid, between the street of Bridge Street on the east part, and the tenement late of John Brunsop, and Agnes his wife, and the tenement late of Dame Tailliard on the west and south parts, and the tenement late of Richard Cokks, and Lettice his wife, on the north part, and it contains in length, in the north part thereof, between the east and west, sixteen feet and seven inches of assize, and in breadth, in the south part thereof, between the east and west, fifteen feet and eight inches of assize, and in breadth, at the east end thereof, near Bridge Street aforesaid, ten feet six inches and a half of assize, and in length, at the west end thereof, between the north and south, nine feet and six inches of assize, which messuages, lands, and tenements, and other the premises, with their appurtenances, were lately in the aforesaid Henry Colet's, my father, and which by and after the death of the same Henry Colet to me the aforesaid John Colet in hereditary right did lately descend, and into all and singular which messuages, lands, and tenements I, the aforesaid John Colet, by hereditary right, did lately enter, and took thereof full and peaceable possession and seizen, and in my like possession they have hitherto continued, and of the same messuages, lands, and tenements, and other the premises, with their appurtenances, at present I am solely seized in my demesne as of fee. I also, the aforesaid John, do give and bequeath to the aforesaid wardens and commonalty of of the Mystery aforesaid all that my grammar school and the chapel founded in the same, together with the house for the master and the other offices of the same school by me lately built and constructed upon my land lying near the wall of the churchyard of Saint Paul's, London, at the east part thereof, to wit, between the tenement of Alice Cruce, widow, on the south part, and the tenement late in the tenure of Andrew Renne on the north part, containing in length, from south to north, one hundred and twenty-two feet of assize, and in breadth, from east to west, thirty and three feet of assize; and moreover all that my grammar house a messuage lately called Paul's Scole, and four shops under the same house or messuage constructed, now in the tenure of William Berell, citizen and grocer of London, and Joan his wife, for a term of years, situate near Saint Austin's Gate, to wit, between the tenement appertaining to the masters or wardens of the Bridge, London, in which John Hychcock, citizen and merchant tailor of London, now dwells, on the east part, and a certain great gate whose entry leads from the highway there to the churchyard of the Cathedral Church aforesaid on the west part, containing in length, from the aforesaid tenement unto the great gate aforesaid, fifty-five feet of assize, and in breadth twenty feet of assize, which I lately had by gift, grant, and confirmation of John Osyer, Benjamin Digby, and Simon Rice, citizens and mercers of the aforesaid city, and in which at present I am solely seized in my demesne as of fee. And also I give those my two tenements or messuages newly built, with the appurtenances, now in the tenure of John Evers, citizen and haberdasher of London, situate in the Old Change, London, between the tenement now in the tenure of Reginald Jewe, citizen and haberdasher of London, on the south part, and the tenement now in the tenure of the said John Evers on the north part, and they contain in length, from south to north, twenty-eight feet and four inches of assize, and in breadth, from east to west, eleven feet of assize, which I lately purchased of the mayor and commonalty of the city of London, and in which at present I am solely seized in like manner in my demesne as of fee; and moreover, all those my six tenements, with their appurtenances, newly built, situate together in the parish of Saint George in Pudding Lane, near East Cheap, in the ward of Billingsgate, London, between the tenement of the said dean and chapter on the east part, and the lane called Pudding Lane on the west part, and the lane called Saint George's Lane on the south part, and the tenement of the Mystery of Salters, London, called the Scalding House, of old time called Tanner's Hall, on the north part; and the said six tenements contain by land in length, in the south part thereof, near the said lane called Saint George's Lane, between the east and west, fifty-eight feet and six inches of assize, and in length, in the north part thereof, near the said tenement called the Scalding House, between the east and west, seventy feet of assize, and in breadth, at the west end thereof, near Pudding Lane aforesaid, thirty-six feet and three inches of assize, and in breadth, at the east end thereof, between the north and

* Printed from a copy furnished by the Mercers' Company.

south, twenty-six feet and eight inches, which six tenements, with their appurtenances, were late the aforesaid Henry Colet's, my father, and which by and after the death of him, Henry Colet, to me, the aforesaid John Colet, by hereditary right lately did descend, and into all and singular which six tenements, with their appurtenances, I, the aforesaid John Colet, by hereditary right, did lately enter, and took possession and seizen thereof, and in my like possession hitherto have continued, and of the same six tenements, with their appurtenances, at present I am solely seized in my demesne as of fee, to have and to hold all the aforesaid messuages, tenements, houses, and other the premises, with their appurtenances, to the aforesaid wardens and commonalty of the Mystery aforesaid, and to their successors for ever, of the chief lords of the fee, by the services thereon due, and of right accustomed, for the continuation of the aforesaid grammar school, lately, as aforesaid, by me in the churchyard of the said Cathedral Church of Saint Paul's constructed for boys, in the same school to be taught in good manners and literature, and for the sustentation of one master and one usher, or two ushers, of the same school, and to other works, uses, and intentions contained and specified, or to be contained and specified, in certain indentures between the aforesaid wardens and commonalty on one part, and me, the aforesaid John Colet, on the other part, of and upon the premises amongst other things made or to be made. In witness whereof, to this my present testament I have put my seal, the day and year above written, these being witnesses, Edward Shambroke, Nicholas Curlews, William Garrard Clerk, Nicholas Kyme, Benjamin Dygby, Simon Rice, citizens and mercers of London, Morgan Williams, notary public, William Gouldying, writer, William Boureman, Bartholomew Barham, Thomas Odell, William Newbold, William Warmyngton, Henry Digby, my servants, and others.

MERCHANT TAYLORS'.

Statutes of Merchant Taylors' School.*

"Whereas, the Maister, Wardens, and Assistants, in the names of all the whole body of this Company of The Marchaunt-Taylors, in London, have, for the better educacon bringing up of children in good manners and literature, erected a schoole within the parish of St. Laurence-Pountney, in London; And, also, meete and convenient lodgings for a Schoolmaster and three Ushers, to inhabite and dwell in: And, for, because, nothing can contynue long and endure in good order without Lawes and Statuts, in that behalf provided, therefore, they, the said Maister, Wardens, and Assistants, have fully concluded, agreed, and decreed, and, by these presents, doe conclude, agree, and decree, that the said schoole shall be directed and contynued, and to have contynuaunce, by God's grace, for ever, in such manner and forme, and according as hereafter is expressed, mencioned, and declared, viz.:—

Capitulum Primum *de* Magistro Primario.

1. In the Grammar School, founded in the parish of St. Laurence-Pountney, in London, in the yere of our Lord God one thowsand, fyve hundred, sixty-one, by this Worshipfull Company of the Marchaunt-Taylors, of the Citty of London, in the honor of Christ Jesu, shalbe first, an High Maister. This High Maister in doctrine, learning, and teaching, shall direct all the schoole. This maister shalbe chosen by the Right Worshipful the Maister, Wardens, and Assistants, of the said Company of Marchaunt-Taylors, with such advise and counsell of welle learned men as they can gett; a man in body whole, sober, discreete, honest, verteous, and learned, in good and cleane Latine literature, and, also, in Grecke, yf such may be gotten. A wedded man, a single man, or a priest, that hath noe benefice, with cure, office, nor service, that may lett his dew business in the schoole.

2. This high master so being chosen, as aforesaid, shall have his charge given to him by the maister and wardeins of the said Company, for the tyme being, then being present in the said schoole, saying to him on this wise, or such like in effect:

Sir, we have chosen you to be chief maister and teacher of this schoole, to teach the children of the same, not only good literature but also good manners, certyfying you that this is noe roome of contynuence and perpetuity, but upon the doing of your duty in the schoole. And every yere when as the maister, wardens, and assistaunts, shalbe assembled in the schoole howse, concerning the visitation thereof, you shall submytt you to their examinacon, and, found doing your duty accordingly, you shall contynewe, otherwise, reasonably warned, you shall content you to departe; and, ye, of your party, not warned of us, but of your owne mind in any season willing to departe, ye shall give us warning twelve monethes before, without we can shortlyer be well provided of an other to supply your roome.

Also being maister ye shall not be absent from the said school above twenty working days in the year, which also shalbe, (*conjunctim* or *divisim*), without some urgent cause, and good consideracons shall move the surveyors of the said schoole for the tyme being to graunt a further tyme of absence, and that the chief usher nor under ushers be not then absent from the schoole.

3. And yf the chosen maister will promise this, then admytt him and name hym to that office, and stall him in his seate in the schoole, and shew him his howse or lodging on the south side of the schoole. And they shall deliver him all the implements of that howse by indenture.

4. And that howse and lodgings he shall have free without payment of any rent, and in this lodging he shall dwell and keepe howshold to his power. Hee shall nor have, nor teach, at one tyme within the foresaid schoole, nor ells where, above the number of two hundred and ffyfty schollers. And he shall not refuse to take, receave, and teach in the said schoole freely one hundreth schollers, parcell of the said number of two hundreth and ffyfty schollers, being poore men's sonnes and coming thether to be taught, (yf such be meete and apt to learne), without any thing to be paid by the parints of the said one hundreth poore children for their instruction and learnyng.

5. And hee shall also receave and teach in the said schoole ffyfty schollers more, being an other parcell of the said number of two hundreth and ffyfty schollers comyng thether to be taught, and being found apte and meete to learne, as aforesaid, and being poore men's children, so that their poore parents, or other their friends, will pay and give to the high maister for their instruction and learning, after two shillings and two-pence by the quarter for a peece of them.

6. And hee shall also receave and teach in the said schoole, one other hundreth more of schollers being the residue of the said number of two hundreth and ffyfty schollers coming thether to be taught, and being also found apt and meete to learne, as aforesaid, being rich or meane men's children, so that their parents or other friends will give for every of these hundreth schollers fyve shillings by the quarter for their instruction and learning.

7. Yf the maister be sick of a sicknes curable, yet neverthelesse it is meete that the chief usher, for the tyme that the maister is so sick, shall doe his best endeavor to direct all the schoole, as the duty of the maister was to have done. The said usher to his power to doe his owne duty as he did before neverthelesse.

8. There shalbe also one chief usher, some sober, discreete man, verteous in lyving, and well learned, that shall teach under the schoole-maister as the schoole-maister shall appoint him, some single or wedded man, or a priest that hath noe benefice with cure, office, nor service, that may lett his due diligence in the schoole.

9. And yf the said chief ussher be in literature, discretion, and honest lief, according, then the high maister his roome being vacant, lett him be chosen before another.

10. This ussher shall the high maister choose as often as the roome shal be void, a man whole in body. And when the high maister hath appointed him upon one, the high maister shall call to the schoole the surveyors of the schoole, and before them he shall say to the ussher on this wise:

Sir, before these my maisters here, the surveyors of the schoole, I shew unto you that I have chosen you to be the chief ussher or under maister of this schoole, and to teach allwaies, from tyme to tyme, as I shall appoint you, and supply my roome in my absence when it shalbe graunted me by my maisters, the said maisters and wardens, and also at all such tymes as I shal be sick of any curable disease.

11. Then the said maister and wardens shall exhort the ussher dilligently to doe his duty, and shall say unto him on this wise:

Your roome is noe perpetuity, but, according to your labor and dilligence, you shall contynue: otherwise, fownd not doing your duty accordingly, and reasonably warned of us, ye shall departe.

Yf it shalbe so that at any tyme you will departe of your owne mynd, yee shall give us one yere's warning before your departure.

Yff any controversy be between you and the high maister, yee shall stand at our direction in every thing.

12. And yf he will promise this, then let the said maister and wardens approve the eleccion of the said ussher, and assigne him his lodging on the north side of the schoole next unto the gate there alowe.

13. Hee shal be absent in all the yere not above twenty

* Printed from Carlisle's Endowed Grammar Schools, vol. ii. p. 49–60.

working dayes, which shalbe, *conjunctim* or *divisim*, without that some urgent cause, or good consideracon, shall move the surveyors of the said schoole for the tyme being to graunt him a further tyme of absence, and that the high maister nor under usshers be not then also absent from the said schoole.

14. In sickness curable, or axes (*agues*), or such sicknes for a tyme he shal be tollerated and have his full wages, although that, during the tyme of such curable sicknes, the high maister, with that help of the under-usshers, shall to the uttermost of their powers, instruct and teach all the schollers within the said schoole withall dilligence, as the duty of the ussher was to have done, the high maister and the under-usshers to their power to doe their owne duty as they did before neverthelesse.

15. Yff both the maister and the usshers be sick at once, (as God defend), then let the schoole cease for that while.

16. Yff there be such sickness contagious in the Cytty, that the schoole cannot contynue, then both the maister and the usshers must have patience in such a case.

17. Neither the maister nor usshers shall take office of *proctorshipp*, or any such mynistery, service, or other business, which shall lett their dilligence and their necessary labor in the schoole. Yf they doe and be warned lawfully, yf they will not cease from such service, office, or business, then let them be warned to departe.

18. Let the schoolmaister see that the schoole, with the court and the streete, by all the length of the same, be kept cleane and sweete every Satterday, and also the leads, and, from tyme to tyme, to call upon the worshipful Marchaunt-Taylors for necessary reparacons, and lett none of the children, at any time, come up to the leads to the upper dore, of the which at the topp of the winding stayers of stone on high, there shalbe allwaies too keyes, to be kept by the high maister, and the other key by the chief ussher.

19. Ther shalbe also in the said schoole two under-usshers, some good, honest, and verteous learned young men. And they shal be chosen, from tyme to tyme, by the high maister, and they shall also help to teach in the schoole, as to the maister shall seeme convenient, and none otherwise.

20. They shall have noe benefice with cure, occupation, office, or service, nor any other faculty which may lett their dilligent teaching at the schoole, but they shall attend only upon the schoole, and they shall teache the children, yf neede be, the Catechisme, and instruccons of the Articles of the Faith, and the Tenn Commaundements in Latin; that is to say, such a Catechisme as shalbe approved by the Queenes Majesty that now is, and by the Honorable Court of Parliament of this Realme from tyme to tyme.

21. Their lodgings and chambers shalbe in the middle roomes where as the dore is made out under the schoole neere to the middest of the foresaid long court or greate yard.

22. They shall not have their roomes by writing or by seale in noe wise, but at liberty according to their deserving, and only so long as the high maister shall like their demeaner and teaching.

23. Their absence shalbe but once in the yere only, yf it be needefull and only as it shall seeme best to the maister and wardens, with the consent of the high maister, and high ussher being present, and not absent from the schoole.

24. Yf they fall to unthriftiness and behavior after lawfull warning let them be avoided, and other chosen within eight dayes after, or as soone after as can be by the said surveyors, but not without the consent of the high maister and ussher.

25. There shalbe taught in the said schoole children of all nations and countreyes indifferently, comyng thether to be taught, to the number of two hundreth and fyfty, in manner and forme as is afore devised and appointed. But first see, that they can the Catechisme in English or Latyn, and that every of the said two hundreth and fifty schollers can read perfectly, and write competently, or els lett them not be admytted in no wise.

26. And that every scholler at his first admyssion, once for ever, shall pay *twelve pence* for writing in of his name, and the same shalbe given to such one, as shalbe appointed by the said high maister and the surveyors to sweepe the schoole, and keepe the court of the schoole cleane, and see the streete nigh to the schoole gate clensed of all manner of ordure, caryon, or other fylthy or uncleane things, out of good order, or extraordynarily there thrown.

27. The children shall come to the schoole in the mornyng at *seaven* of the clock both winter and somer, and tarry there until *eleaven*, and returne againe at *one* of the clock, and departe at *five*. And thrice in the day, kneeling on their knees, they shall say the prayers appointed with due tract and pawsing, as they be, or shalbe hereafter conteyned in a table sett up in the schoole, that is to say, in the morning, at noone, and at evening.

28. In the schoole at noe tyme of the yere, they shall use tallow candle in noe wise, but wax candles only.

29. Also lett them bring no meate, nor drinck, nor bottles, nor use in the schoole no breakfasts, nor drincking in the tyme of learning in no wise. If they need drinck, then lett it be provided in some other place.

30. Nor lett them use noe cock-fighting, tennys-play, nor *riding about of victoring*, nor *disputing abroade*, which is but foolish babling, and losse of tyme.

31. Lett not the schoole-maister, head ussher, nor the under usshers, nor any of them, permytt nor lycence their schollers, to have *remedy* or *leave to play*, except only once in the weeke, when there fallith noe holiday. And those *remedies* to be had upon no other dayes only, but only upon the Twesdayes in the afternoone, or Thursdayes at afternoone.

32. And yf there shall happen to be kept one or more hollydayes in the weeke, that then in every such weeke there be noe *remedyes* nor leave to play graunted.

33. Unto their uryne the schollers shall goe to the places appointed them in the lane or streete without the court; and, for other causes, yf need be, they shall goe to the water-side.

34. Yf any child, after he is receaved and admytted into the said schoole, goe to any other schoole to learne theire, (after the manner of that schoole), or shalbe absent from the schoole, by the space of three weekes together, at any one tyme, without sickness or any other reasonable lett, shalbe the cause of the said lett, that then in such case it were best that such a childe, for no man's suit, shalbe thereafter receaved into our schoole, but goe where him list, and where his friends shall thincke there shalbe better learnyng. And this is good to be shewed to his friends, or other that offer him at his first presenting into the school.

35. The maister, wardens, and assistants of this Company, for the tyme being, shall yerely for ever make their assembly or apparaunce in the councell-howse, or late chappell, scituate on the south side of the long court or yard of the schoole, they being then and there accompanied with such well-learned men as they can gett conveniently. Which said maister, wardens, and assistints, with th' advice of the same learned men shall examyne and try whether the maister and usshers shall have taught and done their duties in the said schoole, according as is before devised and appointed, and alsoe to try and examyne howe the children have profited under them, and fynding them to have done their duties to be comended, and finding otherwise to be speedely reformed and amended according as to their wise discretions shalbe thought convenient.

36. And to that intent and effect that the same assembly of the said maister, wardens, and assistents, may be made yerely for ever at the schoole, for the good considerations afore mentioned, the comon clarck of the mistery now being, and his successors which for the tyme shalbe, shall once in the yere yerely for evermore, at a quarter-day, to be howlden within this our comon-hall, reade openly all and every such acts, decrees, and ordynaunces, or the more parte of them as is before made and devised, or shalbe hereafter made and devised by the said maister, wardens, and assistants, or their successors, for and concerning only the ordering and contynuance of the said schoole in good order, so that thereby they may have the same the better in remembrance for ever in tyme to come.

37. And that the maister and wardens of this Company for the tyme being, and also all such as shall have borne the roome of a maister of this mistery, (except such as shall have borne the room and place of an alderman and sherif of this mistery) shalbe for ever in tyme to come called, and be the surveyors of the said schoole, and they from tyme to tyme shall take upon them the charge and oversight of the said schoole, to see that in the said schoole be noe more taught then the number afore appointed, and after and according as is before devised and made, and alsoe see that the same be well and sufficiently repayred from tyme to tyme by the warden rentor of our lands lying in the east parte, which for the time shalbe. And for their labours in the schoole busynesses it is not to be doubted, but Our Saviour Jesus Christ shall reward them, as well here in this world as in the world to come: For godlynes, sayeth St. Paule, is profitable to all things, as a thing that hath both promises in this lief, and in that that is to come. 1 *Timotheus*, 4.

38. The surveyors of the schoole shall come into the schoole tenn or twelve daies before or after Christmas, tenn or twelve daies before or after Easter, tenn or twelve daies before or after the nativity of St. John Baptist, and tenn or twelve dayes before or after Michaelmas; besides such other tymes as is meete and necessary for them to be at the schoole, for to see that all things doe stand in such order as they ought to be in.

39. And that the yerely rent yssuing, coming, and growing, yerely, for the greate cellor under the schoole-howse shalbe, by the said surveyors, wholly ymployed and bestowed, yerely, betweene the feast of th'Annunciation of

Our Lady and the feast of St. Michael th'Archangell, upon woode, coales, billetts, and faggots, or other good fewell for such of the schollers as, in the extreme could tyme of winter, may have neede to warme them by at tymes very convenient and needfull in the monethes of November, December, January, February, and March, saving that thirteene shillings and foure pence of that rent, (yf the surveyors shall so thinck it good), shall be bestowed every winter upon wax-candles, or other lights of wax, for the poore children to read on their bookes by in the winter mornings and evenings.

40. Also lett it be declared unto him that shall hier the said long cellor that this Company will not suffer to be laid into yt any pitch, tarr, rape, oyle, trayne-oyle, flax, hempe, nor suche kynde of wares as be inclyned quickly to be kindled or fyred, nor any other thing or things of any fullsome or noysome savour.

41. Every of the said two hundreth and fyfty schollers that shalbe admytted or suffered to learne in the said schoole, from tyme to tyme, shall observe and be bound to keepe all such manner of orders or ordynaunces as, by the wisdome and good discretion of the said worshipfull maister and wardens, with the consent of the worshipfull the assistents of the said Company, or their successors for the tyme being, shall be devised, made, and ordayned, for the contynuance of the said schoole and good governaunce of the said schollers, with the consent of the high maister of the same schoole for the tyme being.

42. Also the maister and wardens of the said Company, for the tyme being, shall have full power and authority to admytt all those children that shall be from tyme to tyme taught in the said schoole; and, by writing made by the clarck of this Company, for the tyme being, they shall signify the admytting or allowing of them unto the schoolmaister, in his absence to the head ussher breifly in this wise:

Sir, this shalbe to signify unto you that wee have admytted N. the sonne of M. the bearer hereof, to be of the number of those hundreth of the poore men's children, which should be taught freely in the said schoole, upon condition that the said N., within one moneth next ensuing, shalbe by you thought apt and meete to learne, and, being found not apt and meete to learne, as aforesaid, that then this our admyssion of him to stand as void, and then every such scholler, that so shall be found not apt and meete to learne, to have repayed unto him that *twelve pence* that he paid on his first admytting into the schoole, or otherwise to be one of the other two numbers of schollers before appointed, which said bill to be made by the said clarck to be subscribed by our maister and wardens for the time being.

43. And none to be taught in the said schoole unless they be first admytted by the maister and wardens, and so certified as is aforesaid.

44. Also there shalbe yerely paid out of the common box of this mystery, for the stipend and sallary of the foresaid schoolemaister, and three usshers, fforty pownds quarterly by even porcons to be paid wholly to the hands of the said schoolemaister to the intent that he, the said schoolemaister, shall have to his own use tenn pounds parcell thereof, and the thirty pounds residue to be paid by him after tenn pounds a piece to every of the said three usshers, that shalbe admytted by him to teach in the said schoole as aforesaid.

45. And this payment by fforty pounds, by yere appointed to the said maister and three usshers, as aforesaid, to be contynued untill such tyme as the same shalbe otherwise dischardged by the guifts and legacies of good and well-disposed men, to the freeing either of the said whole number appointed to be taught in the said schoole, or els of the freeing and teaching free of one hundreth fyfty poore men's children, parcell of the said number that is appointed to be taught in the said schoole as is aforesaid."

RUGBY.

I.—Copy of the "Intent" of Lawrence Sheriff, Founder of Rugby School, referred to in the Answers received from the Trustees of Rugby School, Part II. Qu. 1.

"To all Christian people to whom this pr'sent writinge shall come to bee seene or read, Lawrence Sheriffe, citizen and grocer of London, George Harrison, of London, gent., & Bernard Ffield, citizen and grocer of London, send greetinge, in our Lord God Everlasting. Where' the said Lawrence Sheriffe, by Ind're beareinge date the day of the date hereof, for the considerac'on therein mentioned, hath bargained and sold to the said George and Bernard, and their heires for ever, all that his p'sonage of Brownesover, in the county of Warwicke, with all the rights, members, and appurten'ce of the same, and all and singular other the messu's, landes, tenem^{ts}, and hereditam^{ts} of the said Lawrence, sitt, lyinge, or beinge in Rugby, in the said county of Warw., and in Brownesover aforesaid, or in either of them, or elsewhere in the saide countye of Warw., as by the saide indenture more playnlye and att large it doth and may appeare; the confidence, trust, and intent of the said Lawrence Sheriffe neverthelesse, is, and att the makeinge of the said indenture was, that the said George and Bernard, and their heirs, should have, use, and ymploy, convey and assure, the same to such uses and in such manner and forme, as is hereafter declared, and to none other use, intent, and purpose, that is to say, the said George and Bernard, or the survivor of them, or their heires or assignes, should, with convenient speede after the decease of the said Lawrence Sheriffe, with the p'fitte of the p'mises, and with such other s'mes of money as the said Lawrence Sheriffe should therefore give or appoynt by his last will and testament, cause to be builded neare to the messuage or mansion-house of the said Lawrence in Rugby aforesaid, a fayre and convenyent schoole howse, in such sort as to theire discret'ons shal bee thought meete and convenyent, and should also provide or build neare to the said schoole house foure meete and distincte lodgeings for foure poore men, to bee and abyde in, accordinge to their good discret'ons, and should alsoe well and sufficiently repayre the said messuage or mansyon-howse, which things being effectually done, the will and the intent of the said Lawrence was and is, that the said George and Bernard, or their heires or assignes, or some of them, should cause an honest, discreete, and learned man, being a Master of Arts, to bee reteyned to teach a free grammar schoole in the said schoole howse: And further, that after that, for ever there should be a free grammar schoole kept within the said schoole house, to serve chiefly for the children of Rugby and Brownesover aforesaid, and next for such as bee of other places thereunto adjoyneing, and that for ever an honest, discreete, learned man should be chosen and appointed to teach grammar freely in the same schoole, and the same man, yf it may conveniently bee, to bee ever a m^{r} of arte: And further, the will and intent of the said Lawrence was and is, the same schoole shall bee for ever called the Free Schoole of Lawrence Sheriffe, of London, grocer, and that the schoolem^{r} thereof for the tyme beinge, for ever, shall be termed or called the schoolemaster of Lawrence Sheriffe, of London, grocer, and that the schoolmaster and his successors for ever shal have the said mansyon-house with the appurten'ce to dwell in without anything to be paid therefore: And further, that the said schoolm^{r} of the said schoole for ever should have yearly for his sallary or wages the some of twelve poundes; and over this, the will and intent of the said Lawrence was and is, that for ever, in the said foure lodgeings, foure poore men should freely have their lodgeinge, and should also each of them have towards their reliefe seaven by the week, to be weekly paid at Rugby aforesaid; and that of the said foure poore men twoe should ever bee such as had beene inhabitants of Rugby aforesaid, and none other, and the other twoe such as had beene inhabitants of Brownesoever aforesaid, and none other; and also, that the said foure poore men should bee for ever called the Almsmen of Lawrence Sheriffe, of London, grocer: And further, the will and intent of the said Lawrence was and is, that the mansyon-howse, schoole howse, and other lodgeinge should be sufficiently repayred & mayntayned for ever, all which the p'misses the said Lawrence Sheriffe willed & intended to bee borne, paide, and p'formed of the rente and p'fitte of the p'misses so as is aforesaid bargayned and solde: And over this, his will and desire was and ys, that John Howkins, of Rugby aforesaid, and Bridgett his wife, sister of the said Lawrence, during their lives should be the farmers of the said parsonage and other the p'misses in Brownesover aforesaid, for the yearly rent of sixteene pounds, thirteene shilling, fourpence, to bee by them therefore paide, so that the said John and Bridgett doe well and substantially, during their lives, repayre the buildings thereof, and well and truly pay the said rent, and that after their deceasse, before any other, some such p'son as shall be of the body of the said John Howkins and Bridgett, his wife, lawfully begotten or issuinge, and shall inhabitt in Rugby or Brownesover af's^{d}, should be farmer of the said parsonage for the said yearly rent of sixteen pounds, thirteen shilling, & fourpence, yf such bee, that will truly pay the said rent without deley, and well and sufficiently repayre the buildinge of the p'misses in Brownesoever af's^{d}: And whereas the said Lawrence Sheriffe intended, by God's grace, in his lyfetyme to erect and build the buildinge and schoole howse af's^{d}, and to make or secure some good and substantial devysse, whereby his goode intent aforesaid may have contynuance for ever, yf it please God to grant him life to p'forme the same, yet, nevertheless, the desyre, confydence, and trust of the said Lawrence Sheriffe is, that in default thereof the said George Harrison and Barnard Field

will, of the rent, revenuews, and somes of money aforesaid, in all respect substantially, truly, and effectually accomplish the same, in such wayes as by the lawes of this realme may most assuredly bee devysed, and convey and assure the lands, tenements, hereditam^s, and other the p'misses to that only intent and purpose. In witness whereof the said Lawrence Sheriffe, George Harrison, and Bernard Field have thereunto set theire seales, the xxv^th day of July, in the tenth yeare of the reigne of our most Excellent Sovereign Lady Queen Elizabeth, anno D'ni. 1567.

"The true Copy of the Intent of Lawrence Sheriffe concerning the Parsonage of Brownesover, which Intent was sealed, subscribed, and delivered by Lawrence Sheriffe, George Harrison, and Barnard Field, as by the same Intent appeareth. Copyed the 20th of December 1580. E. Harrison."

II.—Schedule containing "Rules, Orders, and "Observations for the good Government of "Rugby Schools and Charity," annexed to the Act 17 Geo. III., c. 71. (An Act to enable the Feoffees and Trustees of an Estate in the County of Middlesex, given by Lawrence Sheriff for the founding and maintaining a School and Almshouses at Rugby, in the County of Warwick, to sell part of the said Estate, or to grant Leases thereof, or of any part thereof, and to effectuate the other Purposes therein mentioned).

First.

Nomination of Masters and Ushers. Their Salaries.

The Reverend Stanley Burrough, Master of Arts, the present schoolmaster, to be continued so long as he shall behave well; and the house now inhabited by the said Stanley Burrough to be the place of his residence, and of the residence of all the masters of the grammar school who shall succeed the said Stanley Burrough; and the room now used as a school to be the place in which the boys resorting to the said schools shall be taught grammar, and the Latin and Greek languages; and one or more usher or ushers, properly qualified to teach grammar, and the Latin and Greek languages, to be appointed by the trustees, or a major part of them, at a publick meeting appointed for that purpose, to aid and assist the master, and to hear the boys under the age of twelve years say their catechism once every fortnight; also a master to be appointed to teach writing and arithmetick in all its branches: And that when and as soon as the monies owing from the said trust estate shall have been paid off and discharged, and the trust estate remaining unsold shall have been leased by the said trustees, or the major part of them, and the rents and profits thereof shall be sufficient to answer the payments herein-after directed, there shall be paid to the master of the said grammar school, for the time being, over and above the annual sum of sixty-three pounds six shillings and eightpence now paid, a sum not exceeding fifty pounds per annum by quarterly payments; and that then there shall be paid to the usher or ushers, to be respectively appointed as herein-before mentioned, such annual sum, not exceeding eighty pounds each, as the trustees or the major part of them, shall think proper; and such annual sum, not exceeding forty pounds, to the writing master, as the trustees, or the major part of them, shall think proper.

Second.

The Choice of succeeding Masters and Ushers. Their Qualifications. If removed for Age, etc. Trustees may make them an annual Allowance.

That all the masters of the grammar school, who shall succeed the said Stanley Burrough, the present master, the usher or ushers, and the writing masters who shall succeed those first to be nominated, as herein-before mentioned, shall be chosen within three calendar months next after any vacancy shall happen, by the trustees, or the major part of them present at a meeting to be held for that purpose, and be removeable at the will and pleasure of the trustees, or a major part of them present at their meeting, on the first Tuesday in the month of August; and that the masters, and usher or ushers, shall be Protestants of the Church of England, as by law established; and the master of the grammar school shall have taken the degree of a Master of Arts, in the University of Oxford or Cambridge: And in the choice of such master of the said grammar school, regard shall be had to the genius of such master for teaching and instructing the children; and a preference shall be given to such as are duly qualified, and have received their education at this school: And the said master, and usher or ushers, shall take care to instruct the boys resorting to the school in the principles of the Christian religion, morality, and good manners, and thereby qualify them to become useful members of the community. And in case such masters, or usher or ushers, shall be removed on account of old age, or infirmity of body or mind, it shall be lawful for the trustees, or the major part of them, present at such annual meeting, if they think proper, by and out of the rents and profits of the estate, to pay and allow the master or usher so removed an annual sum, not exceeding eighty pounds a year for the master of the grammar school; forty pounds a year apiece for the usher or ushers; twenty pounds a year for the writing master; determinable at the will and pleasure of the trustees, or the major part of them, present at any quarterly meeting.

Third.

Boys to be instructed without Fee; and to attend Divine Service. A yearly Sum to be paid by the Trustees, to the Master, for each Boy.

That the boys of Rugby, Brownsover, or in any towns, villages, or hamlets, lying within five measured miles of Rugby, or such other distance as the major part of the trustees, present at any publick meeting, shall ascertain, regard being had to the annual revenues of the said trust estate for the time being, shall be instructed by the said masters and ushers respectively, in grammar, and such other branches of learning as are herein-before mentioned, without taking from the said boys, or their parents, friends, or relations, any fee or reward for the same, directly or indirectly: And that such boys shall regularly attend divine service on a Sunday, unless prevented by sickness. And in order to proportion, in some degree, the profits of the master of the grammar school to the number of the boys under his care and tuition, such yearly sum as the major part of the trustees, at any publick meeting, shall approve of, not exceeding the yearly sum of three pounds, shall be paid yearly, by and out of the rents and profits of the said charity estates to the master of the grammar school, over and above the salary herein-before directed to be paid, for every boy of Rugby, Brownsover, or any town, village, or hamlet, lying within five measured miles of Rugby, or such other distance as aforesaid, who shall be instructed by the said master and usher in grammar, and the Latin and Greek languages, and so in proportion for any less time than a year.

Fourth.

Trustees to meet Quarterly.

The trustees to meet quarterly, on the first Tuesday in the months of February, May, August, and November in every year, in the school at Rugby aforesaid, at twelve in the forenoon, and hear the boys of Rugby, Brownsover, or within five measured miles of Rugby examined; and at their annual meeting in August to make such rules and orders for the better regulation of the said school, and the masters and ushers thereof, and of the said almsmen as the said trustees, or the major part of them, present at such meeting, shall think proper: all which rules and orders shall be observed by the masters and ushers of the said school, and almsmen respectively for the time being.

Fifth.

Almshouses to be built. Provision for Almsmen, who are constantly to reside therein.

That the trustees shall or may cause to be built such additional number of almshouses not exceeding four, as the trustees, or the major part of them, for the time being shall approve of, regard being had to the revenues of the said charity; to be for old men of Rugby or Brownsover, who shall be provided with a gown the value of thirty shillings, and a load of coals not less than forty hundredweight, nor exceeding forty-four hundredweight to each of them yearly, and shall be paid such weekly allowance, not less than three shillings and sixpence, nor more than four shillings and sixpence, as the trustees, or the major part of them present at any publick meeting, shall from time to time direct; provided that such persons do constantly reside within the said almshouses. The school-house, school-building, and almshouses to be kept in good repair, and all taxes, parish rates, and other rates and taxes, to be paid by the said trustees.

Sixth.

A Clerk to be chosen, his Duty. The Manner of electing a new Master or Usher.

A clerk to be chosen by the trustees with a reasonable salary, to keep accounts of all monies received and paid, and to examine the accounts of the receiver of the Middlesex estate, and prepare the same for the inspection of the trustees at their general meeting; to register all orders of the trustees, and names of all the boys on the foundation, and when they

came to the school, and when they left it, and the same of almsmen; and to make short abstracts of dates and parties names to all deeds, writings, &c., and to register the same in a book, with references to the places where they are kept, for the more easy finding them when wanted; and to execute all the orders and directions of the trustees in respect to the said charity. That the clerk for the time being shall attend all the meetings of the trustees, and upon the deaths of the masters or ushers, or any of them, give notice thereof to three of the trustees residing nearest to Rugby, who are to appoint a day within three calendar months of such death, for an extraordinary meeting of all the trustees to proceed to a new election, and fourteen days notice at the least to be previously given to each of the trustees of such day; and that notice of such vacancy and day of election shall be inserted in the Whitehall and General Evening Posts, six times in each paper before the day appointed for such election.

SEVENTH.

A Receiver of the Middlesex Estate to be appointed.

That a receiver of the rents of the Middlesex estate shall be appointed by the trustees, or the major part of them present at their annual meeting, with a reasonable salary, and to give sufficient security to be approved of by the trustees, to pass the accounts yearly, and to pay the balance as the trustees, or the major part of them, present at such annual meeting, shall direct.

EIGHTH.

A Fire Engine to be bought.

That a fire engine shall be bought when and so soon as the major part of the trustees present at any publick meeting shall direct; and the same shall be kept in repair for the use of the school, almshouses, and town of Rugby, at the expense of the said trust estate.

NINTH.

Eight Exhibitioners to be sent to some College, etc. for Seven Years.

The trustees, or the major part of them, to elect and send at such time or times as they shall think proper, eight boys to any of the colleges or halls in Oxford or Cambridge, the sum of forty pounds a year by half-yearly payments, to be paid out of the revenues of the said Charity estate to each boy for the term of seven years, and no longer; and to be called The Exhibitioners of Lawrence Sheriff; and the number of such exhibitioners to be from time to time filled up in manner aforesaid; which boys respectively shall not be entitled to receive the same annual sum of forty pounds, unless they shall actually reside eight months in the year in such colleges or halls, and shall, previous to such payment, obtain a certificate of such residence from the master or head of each college or hall.

SHREWSBURY.

I. CHARTER.

Edward the Sixth, by the Grace of God of England, France, and Ireland king, defender of the faith, and in earth of the Church of England and of Ireland supreme head, To all to whom these present letters shall come, greeting, Know ye, that we, at the humble petition as well of the bailiffs and burgesses and inhabitants of the town of Shrewsbury in the county of Salop as of very many other our subjects of our whole neighbouring country there, for a Grammar School to be erected and established there for the education and instruction of boys and youths, of our special grace, and of our certain knowledge and mere motion, do will, grant, and ordain that hereafter there be, and shall be, one grammar school in the said town of Shrewsbury, which shall be called "The Free Grammar School of King Edward the Sixth, for the educating, teaching, and instructing of boys and youths in grammar," to continue at all times hereafter for ever, and the same school to be continued for ever by one master or instructor and one under-master or usher, we do erect, create, ordain, and found by these presents. And further know ye, that we, being willing to carry our intention and purpose in this behalf into effect, of our special grace, certain knowledge, and mere motion, have given and granted, and by these presents do give and grant, to the bailiffs and burgesses of the said town of Shrewsbury, in the said county of Salop, all those our tithes of blade corn and grain and hay, yearly and from time to time growing, issuing, or renewing in the villages, fields, parishes, and hamlets of Asteley, Sensawe, Cliff, Letton, and Almon Park, in our said county of Salop, to the late college of the Blessed Mary in the town of Shrewsbury aforesaid, now dissolved, formerly belonging and appertaining, and lately being parcel of the possessions thereof; and all those our tithes of corn, blade and grain, and hay, yearly and from time to time growing, issuing, or renewing in the villages, fields, parishes, and hamlets of Frankewell, Betton, Woodcote, Horton, Bickton, Calcote, Shelton, Whiteley, and Welbach, in our said county of Salop, to the late college of Saint Cedde in the said town of Shrewsbury, now dissolved, formerly belonging and appertaining, and lately being parcel of the possessions thereof; and the reversion and reversions whatsoever of all and singular the premises and of every parcel thereof; and also the rents and yearly profits whatsoever, reserved upon any demises and grants whatsoever, in anywise made of the premises or any parcel thereof as fully, freely, and entirely, and in as ample manner and form as any masters, provosts, prebendaries, or any other ministers or governors of the said late colleges, or either of them, or any other person or persons heretofore having or possessing the said premises or any parcel thereof, or being seized thereof, ever had, held, or enjoyed, or ought to have, hold, or enjoy the same or any parcel thereof, and as fully, freely, and entirely, and in as ample manner and form as all and singular the same premises came or ought to come into and now are or ought to be in our hands by reason or pretext of a certain Act made and provided in our Parliament held at Westminster in the first year of our reign (amongst other things) for dissolving and determining of divers chantries, colleges, gilds, free chapels and fraternities, and of other things to us given and appointed, or by any other manner, right, or title whatsoever, and which tithes and all and singular other the premises are now extended to the clear yearly value of twenty pounds and eight shillings, to have, hold, and enjoy the aforesaid tithes, rents, reversions, and all other the premises with the appurtenances to the aforesaid bailiffs and burgesses of the said town of Shrewsbury and their successors for ever, to hold of us, our heirs and successors, as of our manor of East Greenwich in our county of Kent, by fealty only in free socage and not in chief, and yielding therefore yearly to us, our heirs and successors, eight shillings of lawful money of England at our court of augmentation of the revenues of our Crown, payable at the feast of Saint Michael the archangel in every year, for all rents, services, and demands whatsoever; and also we have given and granted, and by these presents do give and grant, to the aforesaid bailiffs and burgesses of the said town of Shrewsbury, all the issues, rents, revenues, and profits of the aforesaid tithes and other the premises from the feast of Saint Michael the archangel last past, hitherto arising or growing, to hold to the same bailiffs and burgesses of our gift without account or any other thing for the same to us, our heirs or successors, in any manner to be rendered, paid, or done. And further, of our mere abundant grace and of our certain knowledge and mere motion we have given and granted, and by these presents do give and grant, to the aforesaid bailiffs and burgesses and their successors, full power and authority of naming and appointing a master and under-master of the school aforesaid as often and when the same school shall be without a master or under-master, and that they, the said bailiffs and burgesses, with the advice of the Bishop of Lichfield and Coventry for the time being, may make, and may and shall be able to make, fit and salutary statutes and ordinances in writing, touching and concerning the order, government, and direction of the master and under-master and of the scholars of the school aforesaid for the time being, and of the stipend and salary of the said master and under-master, and of other things touching and concerning the same school, and the ordinary governing, preserving, and disposing of the rents and revenues appointed and to be appointed for the support of same school; and which statutes and ordinances so to be made we will grant, and by these presents command, to be inviolably observed from time to time for ever. And further, of our more abundant grace, we have given and granted, and by these presents do give and grant, to the aforesaid bailiffs and burgesses of the said town of Shrewsbury and their successors, special licence and free and lawful faculty, power, and authority to have, receive, and purchase, to them and their successors for ever, as well of us, our heirs or successors, as of any other persons and person whomsoever, any manors, messuages, lands, tenements, rectories, tithes, or other hereditaments whatsoever within the kingdom of England or elsewhere within our dominions, so that they do not exceed the clear yearly value of 20*l.* besides the said tithes and other the premises to the aforesaid bailiffs and burgesses and their successors as aforesaid by us granted in form aforesaid, the statute of "not putting lands and tenements to mortmain," or any

other statute, act, ordinance or provision, or any matter, cause, or thing whatsoever to the contrary thereof had, made, ordained, or provided in anywise notwithstanding. Nevertheless, we will that the profits, issues, and rents, as well of the aforesaid tithes and other the premises by us hereby granted, as of all and singular such lands, tenements, and hereditaments so to be purchased by them, the said bailiffs and burgesses as aforesaid, be wholly converted and disposed to the support and maintenance of the aforesaid school for ever. And we will and by these presents grant to the aforesaid bailiffs and burgesses that they may and shall have these our letters patent under our Great Seal of England in due made and sealed without fine or fee, great or small, to us, in our hanaper or elsewhere to our use for the same to be anywise rendered, paid, or made, although express mention of the true yearly value or of the certainty of the premises or any of them, or of other the gifts or grants by us or by any of our progenitors heretofore made to the aforesaid bailiffs and burgesses of the town aforesaid and their successors is not made in these presents, or any statute, act, ordinance, provision or restriction to the contrary thereof made, passed, ordained or provided, or any other matter, cause, or thing whatsoever in anywise notwithstanding.

In testimony whereof we have caused these our letters to be made patent. Witness ourself at Westminster, the tenth day of February, in the sixth year of our reign.

II. Mr. ASHTON'S ORDINANCES.

About the Revenue and Minister of St. Mary's.

ORDINANCES made by Thomas Ashton alias Aston, Clerk, late Head or Chief Schoolmaster of the Free Grammar School of King Edward the Sixth within the town of Salop, in the county of Salop, the 11th day of February in the 20th year of the reign of our Sovereign Lady Elizabeth, by the grace of God Queen of England, France, and Ireland, Defender of the Faith, &c., concerning as well the employing and bestowing the rents and revenues of the Rectory of Chirbury, in the county of Salop, and of all the lands, tenths, tithes and other the hereditaments given and assured to and for the maintaining of the said school, as also the placing and ordering of such as hereafter shall serve the ministry in the parish church of St. Mary within the said town, and for and concerning the stipend and salary of the said minister followeth, that is to say:—

To be Three Schoolmasters and their Salaries.

First, it is ordered that from and after* the expiration of the lease of the rectory or parsonage of Chirbury aforesaid, now in esse or being, there shall be and continue for ever for the teaching, instructing, and good education of youth in the free grammar school three schoolmasters or teachers, whereof the one shall be and be called the principal or chief schoolmaster of the said school, and shall yearly for his stipend or wages receive 40*l.*, without further increase; the other and second schoolmaster shall be and be called the second schoolmaster of the said school, and shall receive yearly for his stipend or wages 30*l.*, without [any] further increase,† and the third shall be and be called the third schoolmaster of the said school, and shall receive yearly for his stipend or wages 20*l.* without [any] further increase.

An Accidence or Fourth Master.

2. Item, there shall be an accidence schoolmaster for young beginners belonging to the said free grammar school, which accidence school shall be kept in such convenient place under or near the said free grammar school, as to the said bailiffs of the town and to the chief master of the said free grammar school for the time being shall be thought convenient; the teacher of which accidence school for the time being shall yearly receive for his stipend or wages 10*l.* without further increase; provided always, that if at any time the revenues will not reach for the allowance of these so large stipends, then the said stipends shall be diminished and abated proportionably according to the sum of their revenues.

A School Bailiff.

3. Item, that there shall be a bailiff for the collection of the rents and revenues of the said rectory and other the premises so given and (allowed) for the maintenance of the said school as is aforesaid, which bailiff shall have for the exercise of his said office the yearly fee of 4*l.*, without further increase; and it is ordained that David Longdon shall have and enjoy the said office of bailiwick, together with the said yearly fee of 4*l.* during his life if he behave himself honestly and well in the same office, and so that he first, before he enter into the said office of bailiwick, enter into bond by obligation and recognizance, with two sufficient sureties in the sum of 300*l.*, or more, to the said bailiffs and burgesses for the true levying and answering of the said charge in such sort as shall be thought expedient by the bailiffs of the said town of Salop and the chief schoolmaster of the said school for the time being, and that like order shall be taken with all others that shall hereafter succeed the said David Longdon in the said office.

The Audit November 16th.

4. Item, the 16th day of November yearly for ever in the morning of the same day the same bailiff which for the time being shall be so allowed to collect and gather up the school rents, shall make his accounts thereof and of all other things in his charge, upon his corporal oath, for all the year then next before unto that day in each point which he by these orders shall be charged before the said bailiffs and head schoolmaster for the time being in the exchequer of the said town, and the town clerk shall yearly register the same account in a book to be made for that purpose only, which shall for ever remain in the exchequer aforesaid; and also the said head schoolmaster for the time being shall likewise yearly for ever then and there yield and make his account before the said bailiffs, how he hath bestowed that year the money which he shall then have received for the scholars' admittance, and the same likewise to be registered in the aforesaid book of accounts by the said town clerk, and the same town clerk shall have yearly for his pains and travail for the registering of the same accounts, the fee of 20*s.*

And November 17th (which is 2nd Elizabeth Accession).

5. Item, the 17th day of the same months in the afternoon yearly for ever, all those orders and the same accounts so to be made as aforesaid, shall be read publicly by the said town clerk, before the bailiffs, aldermen, and common council of the said town, with the burgesses of the said town, after which so done the said bailiffs of the said town for the time present [being] shall have 20*s.* allowed them towards a banquet upon the school's (account and) charges, calling such unto them as they shall think good.

Of the Stock Remanent.

6. Item, all the residue and surplusage of the said rents and revenues which shall remain over and above all stipends, fees, and charges, upon the foot of every such account, shall be put into a sure and strong chest to be provided and placed for that purpose in the said exchequer house of the said town of Salop, under such sure and safe custody and in such manner and form as is hereafter in these ordinances expressed, which residue or surplusage shall be called the stock remanent for the said free grammar school.

Keys of the School Chest.

7. Item, that the said chest shall have upon it four strong and good locks, with keys for the same, one of which keys shall remain in the keeping of the bailiffs of the said town for the time being; another of the same keys shall be and remain in the keeping of the senior in office or room of the aldermen; another of the same keys shall remain in the keeping of the said chief schoolmaster for the time being; and the fourth of the same keys shall remain in the keeping of the senior in room or office of the 24 councillors of the said town for the time being.

What to be allowed for Repairs, Law, &c.

8. Item, the said stock remanent, if any be, [there shall be yearly paid and borne all charges of reparations of the said schoolhouse, and of the schoolmasters' lodgings, and of all other things belonging to the said school, and all expenses in riding and travelling about the necessary business of the said school; all charges to be sustained by reason of any suits in law which shall happen for and concerning any the possessions and other the premises given and assured to and for the maintenance of the said school, and all such other charges and expenses as at any such account or audit shall from time to time be thought necessary and convenient by the bailiffs of the said town and the chief schoolmaster for the time being, so that the sum of money so to be taken out or from the stock remanent, and to be employed to and for any the purposes in this article mentioned, do not amount above the sum of 10*l.* at any one time; but if any occasion shall happen to defray or bestow any sum of monies above the said sum of 10*l.* to and for the purposes in any of the ordinances hereafter specified, that then such greater sum shall not be taken out or from the said stock remanent to be employed without the consent of the Master and Fellows of the college of St. John the Evangelist, in the University of Cambridge, testified under their common seal of the same college.

---

* *i.e.* from Michaelmas 1577. † Without increase.

First to finish Buildings.

9. Item, the stock remanent shall first go to make sufficient buildings for the use of the two first schoolmasters, within the court of the said school, as the surplusage yearly will extend unto, and the lodging under the school where Mr. Atkis now dwelleth shall be for ever for the third schoolmaster of the said school, and he that for the time being shall be master of the said accidence school shall have his lodgings in one of the chambers under the school, except he will provide himself otherwise; and that after such sufficient lodgings so made for the said two head schoolmasters, there shall be built in a convenient place a library and gallery for the said school, furnished with all manner of books, maps, spheres, instruments of astronomy, and all other things appertaining to learning, which may be either given to the school or procured with the school money.

What Money to be in the School Bailiff's Hand and how he is to account.

10. Item, such sum or sums of money as shall seem to be convenient to be bestowed upon the reparations of the said school, schoolmasters' lodgings, and other buildings to the said school, not extending above 5*l.* yearly, shall be delivered to the hands of the bailiff or collector of the said school rents for the time being yearly at the audit, as occasion shall serve, from time to time, at the discretion of the bailiffs of the said town and the chief schoolmaster of the said school for the time being, and the bailiff of the school revenues shall at the next audit following yield upon his oath a true account of the laying out and bestowing of the said sum so to him delivered.

A Country School-house.

11. Item, after the buildings aforesaid so made there shall be made or provided (of the stock remanent in some convenient place within the said county of Salop) a house for the said schoolmasters and scholars to resort unto and abide in the time of (any) common plague or other infection dangerous in Salop aforesaid, as to the said bailiffs and head schoolmaster for the time being shall be thought most convenient, and if any such time of (grievous) common plague or sickness any of the said schoolmasters shall refuse to come and remain in such house so to be provided, and there to teach and execute his or their office or offices to the said scholars thither resorting and there abiding during the time and times of such common plague or sickness, that then he or they so refusing shall be debarred of his or their wages due for all the time of his or their absence thence.

To found Two Scholarships and Two Fellowships.

12. Item, after the edifices and buildings aforesaid so made and provided, then, if it shall please God to increase the said stock remanent to the sum of 100*l.*, or above that, then there shall (with the said money in convenient time, and from time to time as the said stock remanent shall arise and increase) be purchased and bought so much lands, tenements, or hereditaments as will suffice for the founding, erecting, and maintenance of two scholarships and two fellowships in the aforesaid college of St. John's, or as the said college, with the bailiffs and burgesses of the said town of Salop, with the head schoolmaster of the said school, shall condescend upon for the better provision of the said two scholarships and fellowships for such scholars as have been or shall be brought up in the aforesaid free school, after the rate of 12*d.* the week for every scholarship, and 2*s.* the week for every fellowship, of which scholars and fellows so to be found and maintained in the said college, with the revenues so to be purchased as aforesaid, election shall be made of the scholars of the said free school in manner and form following, that is to say: first, of such scholars as have been or shall be born in the said town of Salop, and for default of such, then such as be or shall be born in the suburbs of the same or in the Abbey foregate adjoining thereunto, which be or shall be the legitimate sons of burgesses of the same town, if they be found meet and apt for such preferment; and for default of such, then choice to be made of such scholars of the said school as were born within the franchises of the said town; and for default of such, then the choice to be made of such of the said scholars as have been or shall be born within the parish of Chirbury, within the said county of Salop, and brought up in the said school; and for default of such, then choice to be made of such scholars as be or shall be born within the said county of Salop, and brought up in the said school; and that every such election shall be yearly and from time to time made by the masters and seniors of the said college for the time being of such scholars as be or shall be sent from the said school to the said University of Cambridge, concerning the which scholars the said bailiffs, with the said head schoolmaster for the time being, shall give notice of by their letters to the said master and seniors of the said college to be burgesses' sons, or the sons of some others in these orders before specified; and the said master and seniors shall elect of the same scholars, according to these orders, such as are godliest, poorest, and best learned.

More Scholarships and Fellowships.

13. Item, after the said two scholarships and followships so purchased as aforesaid, the said surplusage of the said stock remanent shall be from time to time bestowed and employed for ever for the purchasing of scholarships and fellowships for the scholars of the said free school, in such of the said two Universities of Cambridge and Oxford as the bailiffs of the town of Salop and the chief schoolmaster there for the time being shall think good.

How to Set and Let.

14. Item, when the aforesaid rectory, lands, tenements, tithes, hereditaments, or any part thereof, are to be set or let, the bailiffs of the said town, with the assent of the chief schoolmaster of the said school for the time being, shall set and demise the same to such person and persons as will give most yearly rent for the same, and if the same shall be set for any time certain, that then every such demise and grant shall be by deed indented, to the one counter-payne whereof shall be put the common seal of the said town, with the hand and seal of the said head schoolmaster for the time being, testifying his consent to the same; all which demises shall be made without fine, fraud, or coveyn, for that the best yearly rent shall be from time to time reserved upon every such lease and grant, and that no lease or grant shall be made of the premises or of any part thereof for any longer term than for 21 years only, to begin from the day of the same lease or grant, or from the end of the old lease then in esse or being; provided nevertheless that no lease or grant, leases or grants, of the premises, nor of any part thereof, shall be made to take effect after the end of any former lease or grant, unless such former lease or grant be to end and determine by the tenor thereof within one year next after every such new lease or grant, anything before-mentioned to the contrary in anywise notwithstanding.

A Clause of Re-entry and Security.

15. Item, that in every such lease and grant so to be made as aforesaid, therein shall be contained a clause of re-entry for non-payment of the rent and rents to be reserved upon every such lease and grant within 20 days next after the days and times appointed by such reservation for the payment thereof, and that every such lessee and grantee shall be bound with sufficient sureties for the payments of the rents so to be reserved, and performing of the covenants and agreements in the same writings contained, in such sort as to the bailiffs of the said town and chief schoolmaster of the said school for the time being, or any two of them, whereof the said schoolmaster to be one, shall be thought convenient, with the advice of learned counsel.

The Bailiffs to take an Oath.

16. Item, the bailiffs of the aforesaid town for the time being shall from time to time for ever yearly, at the taking of their oaths for and touching the execution of their office of bailiwick, take their corporal oath upon the Holy Evangelist for the true accomplishment and execution of such and so many of these ordinances as concern the demising, granting, setting, and letting of the said rectory, tithes, and other the premises, or any part thereof, and the employing and bestowing of the rents, issues, and profits, and of every part thereof, according to the true intent and meaning of these presents, at which time the said head schoolmaster shall be ever present, except sickness or other urgent causes to them known be let thereunto.

The Minister of St. Mary's.

17. Item, he that shall be curate or serve the ministry in the parish church of St. Mary's, in the aforesaid town of Salop, shall be such a fit man as hath been brought up in the said school, and a graduate, being a burgess's son of Shrewsbury, if any such can be found from time to time, and for default of such a burgess's son the election to be made of any other such fit man that is or shall be born within the parish of Chirbury; and for default of such, then of any of like sufficiency so often as the said cure shall be void, by the said bailiffs and chief schoolmaster for the time being; and the said curate shall have yearly for his stipend or wages 20*l.*, without diminishing, and he shall receive the aforesaid stipend or wages at the hands of the bailiffs of the rents of the said school for the time being, in

such sort and time as the said schoolmasters shall receive their stipend or wages; and in the choosing of the same curate the chief schoolmaster shall be sworn to grant his voice freely to him that he thinketh most worthy, without either reward, bribery, or other coveyn, fraud, or deceit whatever.

Shall be resident.

18. Item, the aforesaid minister or curate of St. Mary's shall from time to time be there resident personally, and shall not be allowed to be absent any longer than one month in the year, unless he be visited with sickness or else have some other urgent business, which to the bailiffs of the said town and head schoolmaster shall be thought cause sufficient of his absence; and that such curate in his absence shall have a sufficient and able deputy to supply his office in the time of such absence or sickness.

His Behaviour.

19. Item, the aforesaid curate or minister shall not be a common gamester, nor common haunter of taverns or ale-houses, or other suspected houses or places of evil rule; neither shall be of any other known vice at the time he is elected to serve in the ministry aforesaid, nor at any time after.

May be visited.

20. Item, if the aforesaid minister, being so elected and chosen as aforesaid, shall happen to be non-resident otherwise than is before mentioned, then he shall be expulsed forthwith from the said living and cure by the said bailiffs and head schoolmaster for the time being, and for any other vice, fault, or crime to be admonished thrice by the bailiffs and head schoolmaster aforesaid, and then, if no amendment follow, to be expulsed by the bailiffs and schoolmaster as is aforesaid; and the like order shall be observed in the electing, placing, and expulsing of him that shall serve in the cure or vicarage of Chirbury, so oft as the said cure shall be void, so that he which shall be chosen thereunto be first preferred, if he be or shall be born in the aforesaid parish of Chirbury.

21. Item, whensoever any ambiguity or doubt shall arise concerning the understanding and meaning of any of these ordinances, the recorder of the said town for the time being, together with the said Thomas Ashton during his life, with two learned men in the laws of the realm, such as the said bailiffs and head schoolmaster for the time being shall think convenient and nominate, shall be interpreters and expounders of the same, without delay.

III. BAILIFFS' ORDINANCES.

Ordinances made by the bailiffs and burgesses of the town of Salop, by the advice and consent of the Reverend Father in God, Thomas, Bishop of Coventry and Lichfield, and of Mr. Asthon alias Ashton, clerk, late head schoolmaster of the said school, for and concerning as well the honest qualities, manners, and learning, as also the election, admission, expulsion, displacing, manner of teaching, hours of teaching, authors to be taught, and all other things whatsoever concerning the rule and government of the schoolmasters and scholars of the aforesaid free grammar school, as followeth, that is to say:—

The Regularity of the Schoolmasters.

1. Imprimis, no schoolmaster shall keep any ale-houses or taverns, or houses of gaming or other unthriftiness or evil rule.

A Master's Widow.

2. Item, at the death or departure of any of the said schoolmasters, his or their wife or wives and family shall depart thence quietly, within the space of one-quarter of a year next ensuing such death.

The Chief Schoolmaster's Qualification.

3. Item, the head schoolmaster's degree of the said school for the time being shall be at the time of his election a Master of Arts of two years standing at the least, well able to make a Latin verse and learned in the Greek tongue.

The Second Master's.

4. Item, the second schoolmaster of the said school for the time being shall be, at the time of his election, a Master of Arts at the least, and well able to make a Latin verse and learned in the Greek tongue before he be admitted to teach in the said school.

The Third Master's.

5. Item, the third schoolmaster of the said school for the time being shall be a Bachelor of Arts at the least, and well able to make a Latin verse, and of such sufficient learning as that place requireth, before he be admitted.

A Schoolmaster not to take the Cure of Preaching.

6. Item, that the foresaid schoolmasters, nor any of them, shall not be common gamesters or common haunters of taverns, or ale-houses, or other suspected houses or places of evil rule, or of other known vice, at the time they be elected to serve in the place aforesaid, nor at any (other) time after; neither shall they or any of them, during the time they or any of them shall supply that place or places, take the charge or cure of preaching or ministry in the Church; neither practise physic or any other art or profession whereby his service in the (said) school may be hindered.

The Election of Schoolmasters.

7. Item, when any of the three rooms of the head schoolmasters of the said free grammar school shall be vacant, the other schoolmasters or schoolmaster then remaining shall forthwith give notice thereof to the bailiffs of the said town for the time being, which bailiffs shall from time to time have the nomination and appointment of the said schoolmasters, with the advice of the Bishop of Coventry and Lichfield for the time being, to the tenor, true meaning, and effect of the said Letters Patents of the said late King Edward the Sixth; nevertheless, to the intent that such schoolmasters may be from time to time elected of such as shall be best able to supply those functions or rooms, and that of such as have or shall be scholars in the said free schools, if any such then shall be, it is ordained that the said bailiffs of the said town of Shrewsbury for the time being shall, within 20 days next after such notice to them given, give advertisement and knowledge of such avoidance to the Master and Fellows of the College of St. John the Evangelist, in the University of Cambridge, with request to them to elect and send to the said bailiffs one able, meet, and apt man for that purpose, with the testimony of his conversation, under their letters ensealed with their seal of office, to be elected by the said Master and Fellows, or by the greatest part of them there present, for ever, in manner and form following, that is to say:—first, of such as were or shall be born within the said town of Salop, being the legitimate son of a burgess there, and having been a scholar in the said free school, if any such there be; and in default thereof, then of such as were or shall be born within the liberties or franchises of the said town, or in the Abbey Foregate adjoining to the said town, being the legitimate son of a burgess, and having been a scholar in the said school, if any such there shall be; and in default thereof, then of some sufficient man born in the county of Salop, and brought up in the said school, whereof it is meant first to prefer such as are or shall be born in the parish of Chirbury; and in default thereof, then of some sufficient man born in any other county or shire, so that they which have been scholars of the said school be evermore preferred, if any such be thought worthy of the place, by the Master and greatest part of the Fellows of the said college there present.

To go to the Bishop.

8. Item, the schoolmaster so to be appointed, at his coming from the said college, shall repair, first, to the Bishop of Coventry and Lichfield for the time being, to the end to be by him allowed and sworn to the statutes of the realm in that case provided, and then to bring with him from the said Bishop to the said bailiffs a testimony under the hand and seal of the said Bishop, and then to be also allowed by the said bailiffs, if they shall so think worthy of him; and if the bailiffs shall mislike of such person upon any cause reasonable, then they forthwith to certify such cause of their mislike to the said Master and Fellows of the said college, and thereupon they to make a new election in form aforesaid of another schoolmaster or schoolmasters to supply the rooms so void, and him to commend and send to the said bailiffs as aforesaid.

The Schoolmaster's Oath.

9. Item, every schoolmaster, at his admission and placing in the said rooms, place, or office of a schoolmaster there, shall, before his admission, take a corporal oath before the said bailiffs of the town for the time being, in the exchequer there, to the effect ensuing, that is to say:—the head master shall swear to keep a true register book of all the names of the scholars which shall be admitted into the school, and make a just account at the audit of all sums of money received for their entrance; also he shall swear that when any lease is to be let he shall grant his voice for the best advantage and maintenance of the said school, and to such as will give most yearly rent for the same, without favour, partiality, or other fraud, coveyn, or deceit.

Second and Third Master's Oath.

10. Item, the second and third schoolmasters shall swear at their admittance not to withhold or detain any part or parcel of the entering money, neither to admit or expulse any scholar without the consent of the head schoolmaster.

All.

11. Item, that all the said schoolmasters and teachers shall swear at their several admissions that they shall not purloin, steal, convey, carry away, give, lend, or by any means defraud or spoil the said school, or any the buildings belonging to the same, of anything whatsoever they there shall have found, or after was bought with the school money.

Each to make an Inventory.

12. Item, every of the same schoolmasters at his admittance shall take an inventory of all such things he there findeth in the lodging or room wherein he is placed, and deliver it to the exchequer of the said town; and also at his death or departure leave another inventory to the same exchequer of those things which have been bought in his time, and the town clerk shall write all those things in his register book for that purpose; and the implements and things contained in the aforesaid inventory shall be viewed and seen by the bailiffs for the time being at every such admission.

At Admittance.

13. Item, after such election, admission, and allowance of any schoolmaster as aforesaid, every such shall be placed in his room by the bailiffs of the said town for the time being, which schoolmaster so then to be placed shall forthwith in the said school, in the presence of the said bailiffs and scholars, then make such oration in Latin as he shall think good; then some one of the best scholars there shall welcome him with a congratulatory oration in Latin in the name of all his fellows, with promising of all obedience; then the same schoolmaster shall answer thereunto in English, that all the audience may understand. The which done, Mr. Bailiffs shall then in the school drink to the new schoolmaster, and the schoolmaster to the former schoolmasters and scholars, and this to be done upon the school charges, whereunto shall be allowed 20*s.*, to be defrayed by the bailiff and collector of the revenues and rents of the said school then being, at every such change to make a banquet, and the same to be allowed upon his account at the audit then next following out of the stock remanent.

Cause of Expulsion.

14. Item, the schoolmasters being chosen and allowed, shall enjoy their places so long as they will, and not be put out of the same upon (any) light surmise or malicious quarrelling, but upon some bad behaviour, some wicked and foul crime, as breach of some of these orders worthy of such displacing, namely, in the wilful breaking of the true meaning of these ordinances, which they are sworn unto at their admittance, or for often and wilful absence from school in time of teaching, or if they be common gamesters, common haunters of taverns or ale-houses, or other suspected houses or places of ill rule, wilful perjury, or other odious crime, and then to be displaced forthwith, as hereafter is specified; and for smaller faults worthy of admonishment to be admonished twice by the bailiffs of the said town for the time being, and once by the Bishop of Coventry and Lichfield, which shall be by his letter or otherwise; and if after these three admonitions no amendment follow, then to be displaced by the bailiffs of the said town for the time being, and another to be chosen in his room, according to the ordinances before specified.

In Case of a Contagious Disease.

15. Item, if any of the said schoolmasters be visited or infected with any loathsome, horrible, or contagious disease, then likewise to be removed by order of the said bailiffs and burgesses of the said town for the time being, with some charitable relief out of the revenues of the said school towards him, to be extended at the discretion of the said bailiffs and burgesses.

When to make a Deputy.

16. Item, if any of the said schoolmasters happen, by great age, sickness, or imbecility, to be unable to serve in that function, then, for that none of them shall be altogether destitute of living in that their necessity, neither the school altogether unprovided for, the schoolmaster or schoolmasters so defective, during such necessity shall give the half of his or their wages yearly to a substitute or substitutes, and the same substitute or substitutes so appointed to teach in the lowest room or lower rooms; provided always, that in such necessity the schoolmaster or schoolmasters that are in health shall bear and tolerate with such infirmity (being no loathsome, horrible, or contagious disease) for one twelvemonth next after, without defalcation of wages to the person or persons so visited with sickness, for that the same schoolmaster or schoolmasters with help of his or their scholars, may take so much the more pains.

How the Masters are to succeed each other.

17. Item, when the head schoolmaster giveth over his function or dieth in the same, if the second master hath served in that function two years at the least next before such death or giving over, and by trial hath proved his learning, zeal, conversation, and diligence, to be able to discharge the office, then he shall be admitted by the bailiffs for the time being, by the consent of the Bishop of Coventry and Lichfield, to that room being void. Likewise, if the second die or depart, the third then, if he be a Master of Arts, shall have that room so being void, if his continuance hath been two years, and hath showed such skill and diligence as that the head schoolmaster, with the consent of the bailiffs of the said town for the time being, shall think him worthy of that place; so that after all such removings of schoolmasters into higher rooms, the bailiffs shall then give notice to the Master of St. John's College of the room vacant.

Hours of coming to School.

18. Item, the scholars shall come to school in the morning from the feast of the Purification of our Lady to the feast of All Saints at 6 of the clock, and from the feast of All Saints until the feast of the Purification at 7 of the clock, at the ringing of the school bell, and no candle shall be used in the said school for breeding diseases, and danger and peril otherwise.

Hours of Departing.

19. Item, the going to dinner of the scholars shall ever be at 11 of the clock, which clock shall be prepared hereafter of the school money; and their coming to school after dinner shall be a quarter before 1 of the clock, at the ringing of the school bell, and their departure at night in winter shall be half an hour after 4 of the clock, if daylight will serve thereunto; and in summer they shall depart home half an hour after 5 of the clock at night.

Prayers in School.

20. Item, prayers now usually had in the said school shall be sung and said every morning devoutly, upon their knees, immediately after the school bell doth cease ringing, and likewise before they depart from school in the evening.

Thursday's Exercise.

21. Item, every Thursday the scholars of the highest form, before they go to play, shall for exercise declaim and play one act of a comedy, and every Saturday versify, and against Monday morning give up their themes or epistles; and all other exercises of writing or speaking shall be used in Latin.

When Play Days.

22. Item, the scholars shall play upon Thursday, unless there be a holy day in the week, and no day else but the Thursday, unless it be at the earnest request and great entreaty of some man of honour, or of great worship, credit, or authority, and that by the consent of the bailiffs for the time being first had and obtained.

What Plays.

23. Item, the scholars' play shall be shooting in the long bow and chess play, and no other games, unless it be running, wrestling, or leaping, and no game to be above 1*d.* or match above 4*d.*; and lastly, that they use no betting openly or covertly, but when it is found either the scholars so offending to be severely punished or else expulsed for ever.

Who to be admitted.

24. Item, no scholar shall be admitted into the free grammar school before he can write his own name, with his own hand, and before he can read English perfectly, and have his accidence without the book, and can give any case of any number of a noun substantive or adjective, and any person of any number of a verb active or passive, and can make a Latin by any of the concords, the Latin words being first given him.

Admission Fee.

25. Item, every scholar shall pay for his admission, viz., a lord's son, 10*s.*; a knight's son, 6*s.* 8*d.*; a son and

heir apparent of a gentleman, 3*s.* 4*d.*; and for every other of their sons, 2*s.* 6*d.*; and any under those degrees above-said and born without the county of Salop, 2*s.*; and any under those degrees above-said and born within the county of Salop, 12*d.*; every burgess's son inhabiting within the town or in the liberties thereof, or of the Abbey Foregate, if he be of ability, 4*d.*; the son of every other person there inhabiting, 8*d.* The head schoolmaster shall be sworn to see all and every parcel thereof bestowed upon the building belonging to the said school, and schoolmasters' lodgings belonging to the school, and give his account thereof yearly at the audit.

Scholars to go to Church.

26. Item, for the due order of all the said scholars, their coming to church and reverent serving of God, it is ordained that every parent or householder within the town or suburbs tabling any scholar or scholars, shall cause and see all such their children or tablers to resort to their parish church every Sunday and holy day to hear divine service at morning and evening prayer, and to the intent that they may the better quietly and reverently behave themselves there, the schoolmasters shall appoint several monitors for every church, to note as well their absence as misbehaviour in any thing; but where there is a sermon in any one church they shall all resort thither to the hearing thereof.

Shall not absent before breaking up.

27. Item, the scholars shall not absent themselves until such time (before the feast of Christmas, Easter, and Whitsuntide) as the school shall break-up without any urgent cause, and then licence also first obtained of every of the schoolmasters.

To be expelled for Absence.

28. Item, if any scholar after he hath liberty at the breaking-up of the said school before any of the said feasts of Christmas, Easter, or Whitsuntide, depart from school, or being licensed at any other time by every of the said schoolmasters, shall not return again within the space of one whole week after the times of teaching aforesaid, shall be gone again, or within the space of one whole week after his license expired, that then every such scholar to be rejected and received no more into the said school, unless it be proved before the head schoolmaster and second schoolmaster that sickness or [some] other urgent cause hath letted him, or else been further licensed by every of the said schoolmasters for a longer time, or else pay for his admission as at the first.

And for Contumacy.

29. Item, if any scholar, after he is admitted, be wilful or obstinate concerning any order touching the said school, then in such case every such scholar shall be expulsed, and not received again unless his friends will undertake to the chief and second schoolmasters for his obedience and good bearing in all things, and also then to pay for his admission again as he paid at his first entry, and if after he fall to his former unruliness or disorder, then to be expulsed for ever.

When Masters to come to School.

30. Item, the second schoolmaster shall come to the school every morning for the space of one week before the bell cease, to the intent to see the scholars sing and say the now usual prayers there reverently upon their knees, the which prayer being ended he shall orderly call the rolls for absence of the whole school, and punish them for negligence according to his discretion and their deserts; and likewise the third schoolmaster for the space of one other week next following shall, every morning before the bell cease, come to the school to the end aforesaid, and do everything which is prescribed as before to the second schoolmaster, and this successively week by week they two shall continue the whole year for ever, while they be schoolmasters or teachers in that school; and the like order shall they observe at the ringing of the bell in the afternoon for ever while they are schoolmasters there, unless he or they be visited with sickness, and then the head schoolmaster to supply that want; and he that ringeth the school bell shall have for his pains 20*s.* yearly, to ring it one quarter of an hour at the hours before appointed for the scholars coming to the school, the same 20*s.* to be allowed yearly at the audit or account of the stock remanent.

To call the Names.

31. Item, he of those two schoolmasters whose duty or turn it is that week to call the rolls and punish absence shall, within the space of one quarter of an hour after his coming, give notice to his fellow schoolmaster by the tolling of a bell provided for that purpose to come to school, at the which tolling the said schoolmaster shall always come to school in the morning and afternoon, unless he be visited with sickness, and then in such necessity the head schoolmaster shall supply that want.

The Head Master's Hour.

32. Item, the head schoolmaster shall ever come to school within the space of one hour after the ringing of the scholars' bell.

Books to be taught.

34. Item, there shall be read in the said school for prose in Latin, Tully, Cæsar's Commentaries, Salust, and Livy; also two little books of dialogues drawn out of Tully's Offices and Ludovicus Vives by Mr. Ashton, sometimes chief schoolmaster of the said school. For verse, Virgil, Horace, Ovid, and Terence. For Greek, the Greek Grammar of Cleonard, the Greek Testament, Isocrates and Demosthenes, or Xenophon's Cyrus, and these authors or some of them mentioned in the table for manner of teaching, to be read in the school according to the head master's discretion and choice as shall seem best for the children's capacity.

Times of Breaking-up.

35. Item, the schoolmasters shall break up school six days before the feast of Christmas, and three days before the feast of Easter and upon Whitsun eve, and not otherwise.

Of beginning School.

36. Item, the schoolmasters shall begin to teach after the feast of Christmas, upon the next week-day after the twelfth day, and after Easter upon the Monday next after Low Sunday, and after Whitsuntide upon the Monday after Trinity Sunday.

A Master allowed Thirty Days Absence.

37. Item, every schoolmaster, besides the feasts of Christmas, Easter, and Whitsuntide, shall have for their recreation or other business 30 days of absence in the year and no more, whether they will take the same 30 days together or at sundry times, making the bailiffs of the said town or their deputies privy thereunto; provided always, that there be but one fourth at a time, unless their urgent business be such as the bailiffs of the town for the time being shall allow and like well of.

38. Item, if any necessary ordinance for the further government of the said school be here omitted, that then the said bailiffs, burgesses, and head schoolmaster, and their successors for the time being, shall therein have due consideration to such advertisement as shall be therein hereafter to them prescribed in writing by the said Thomas Ashton.

Villa Salop.

Tempore Thomæ Sherrer and Thomæ Charlton, Gentlemen, Bailiffs, at an assembly of the Bailiffs, Aldermen, and Common Council, tent. quarto die Jan[i] anno regn. Regin. Elizab., &c., 20°.

They be agreed at this assembly that at the consideration of the book of orders concerning the free school, shall be referred to Mr. Bailiffs, and other the persons whose names are subscribed, or most part of them; and that upon finishing thereof the whole commons of the town shall be assembled for their consents therein at such time as Mr. Bailiffs shall appoint:—

Mr. Thomas Aston.	Mr. Beacoll.
Mr. Richard Prince.	Randle Russell.
Mr. Edward Davies.	David Lloyd.
Mr. Lawrence.	John Pearch.
Mr. Robert Ireland.	Edward Owen.
Mr. Thomas Burnell.	Wm. Wead.

At an assembly the 11th February anno præd. they are agreed and present by the mouth of Wm. Tench, Gentleman, their speaker, that the lease of the rectory of Chirbury granted to Richard Prince, Gentleman, and now at this time read unto the commons, and also the indenture tripartite concerning the ordering of the revenues of the free school, and of the setting and letting of all lands, rents, tithes, and other commodities due to the said school, and a bond of 1,000*l.* for performance of a certain covenant in the said indenture (the which were likewise read unto the said commons) shall be presently sealed with the common seal of the said town; whereupon the said seal is fetched out of the treasury in presence of the persons subscribed, and after the said writing sealed in open assembly the seal was again brought into the treasury in the presence of the said persons.

IV. An Act for the better Government and Regulation of the Free Grammar School of King Edward the Sixth, at Shrewsbury, in the County of Salop.—38 Geo. III., 1798.

Letters Patent of Edward VI.

Whereas his Majesty King Edward the Sixth, by letters patent under the Great Seal of England, bearing date at Westminster the 10th day of February, in the 6th year of his reign, did will, grant, and ordain, that there should be one grammar school in the town of Shrewsbury, which should be called the Free Grammar School of King Edward the Sixth, and did thereby create, found, and ordain, in the same school to be one master and one under master; and did, by the same letters patent, give and grant to the then bailiffs and burgesses, and their successors, of the same town of Shrewsbury, certain revenues and hereditaments arising out of certain districts near to the said town, for the support of the said school, and did by the same authorize and empower the said bailiffs and burgesses, and their successors, to make fit and wholesome laws, with the advice of the Bishop of Lichfield and Coventry, for the good order, government, and direction of the said school.

Indenture of Queen Elizabeth.

And whereas her Majesty Queen Elizabeth, by indenture bearing date the 22nd day of May, in the 13th year of her reign, did give and grant unto the said bailiffs and burgesses of the said town of Shrewsbury, the reversion of the rectory of Chirbury, in the said county, expectant upon the determination of certain estates long since expired; and also the reversion of certain tithes of corn and hay, arising from certain other districts near to the said town, belonging to the said rectory, also expectant upon certain estates long heretofore expired: and also the advowson and right of patronage to the vicarage of Chirbury; and also the reversion of certain tithes of corn, grain, and hay, arising from certain other districts near the said town, and belonging and appertaining to the college of St. Mary, lately dissolved, and expectant also as aforesaid; and which estates have also long since expired, together with certain other tithes, lands, tenements, hereditaments, and premises, in trust for the advancement and maintenance of the said school; and the said bailiffs and burgesses did, by the same indenture, for them and their successors, covenant on their part to and with the said Queen, that they would employ the residue of the revenues and profits of such revenues thereby granted, after certain payments therein directed to be made, according to such orders and constitutions as should be made in that behalf by Thomas Ashton, clerk, then head schoolmaster of the said school; and likewise that they would obey such rules and orders as he the said Thomas Ashton should make, touching the placing and ordering of such as should serve in the ministry of Saint Mary's, and concerning the stipend and salary as should be paid to him for that purpose.

Ashton's Ordinances.

And whereas the said Thomas Ashton did, in pursuance of such indenture, on the 11th day of February, in the 20th year of the reign of the said Queen Elizabeth, make such rules and ordinances as aforesaid, in writing, touching the revenues of the said school.

Bailiffs and Burgesses Ordinances.

And whereas the said bailiffs and burgesses did also, at the same time, make certain other rules and ordinances, in writing, by and with the advice of the lord bishop of Lichfield and Coventry, according to the direction of the said charter of King Edward the Sixth, touching the government of the said school, and the appointment of the masters thereof.

And whereas the said bailiffs and burgesses, by a certain charter of King Charles the First, are now called the mayor, aldermen, and burgesses of the town of Shrewsbury.

The Rules and Ordinances found to be detrimental to the School.
Rules and Ordinances repealed.

And whereas many of the above rules and ordinances are now found, from experience and usage, to be inexpedient and ineffectual; and it would tend essentially to the advancement and good of the said school that other rules and ordinances, better adapted to the present situation of the said school, and more calculated for the due management and application of the revenues belonging thereto, should be made and established: May it therefore please your Majesty that it may be enacted; and be it enacted by the King's most Excellent Majesty, by and with the advice and consent of the Lords spiritual and temporal, and Commons, in this present Parliament assembled, and by the authority of the same, that all the rules, byelaws, and ordinances before mentioned of the said Thomas Ashton, and also all the before-mentioned rules, byelaws, and ordinances of the said bailiffs and burgesses, shall be and are hereby repealed, annulled, and declared to be of no effect whatsoever, except such of them by or under which the scholarships and exhibitions which are at present at the college of Saint John in the University of Cambridge, from the said school, and herein-after mentioned, are founded and maintained.

New Governors and Trustees.

And be it enacted, that in future the mayor of the town of Shrewsbury aforesaid for the time being, Sir Charles Oakeley, baronet, Joseph Plymley, archdeacon of Salop, Henry Bevan, Edward Burton, William Cludde, Thomas Eyton, and Joseph Loxdale, esquires, Hugh Owen, clerk, Thomas Pemberton, esquire, John Rocke, Thomas Stedman, and Richard Wilding, clerks, shall be henceforth governors and trustees of the said school, and of the possessions, rents, revenues, monies, and goods belonging thereto; and that henceforth the said governors and trustees above-named, and their successors, shall from time to time and at all times for ever hereafter remain, continue, and be a body corporate and politic, and shall be called and styled by the name of "The Governors and Trustees of the Free Grammar School of King Edward the Sixth at Shrewsbury," and by that name shall have perpetual succession, and shall and may have a common seal, and implead and be impleaded, defend and be defended, answer and be answered, before all manner of judges and justices, in all courts and places, and in all actions and suits whatsoever.

Qualification of Governors and Trustees.

And be it further enacted, that no person, other than and except the said mayor for the time being, shall be nominated or elected as governor and trustee of the said school, or be capable of acting as such, unless he shall be in his own right, or in right of his wife, in the actual possession or enjoyment, and in the receipt of the rents and profits of lands, tenements, or hereditaments of the clear yearly value of 200*l.* above reprises, or of a clear income of the same amount arising from a personal estate, nor unless he shall be a member of the Church of England as by law established.

Governors to take an Oath.

And be it further enacted, that every governor and trustee, before he shall presume to act in the execution of any of the powers and authorities hereby given, shall take and subscribe, at a meeting of the said governors and trustees, the oath following; (that is to say,)

Oath.

"I, *A.B.*, do swear, That I will truly, faithfully, and "impartially, according to the best of my judgment, "execute and perform all and every the trusts, "powers, and authorities vested in me as a governor "and trustee, by virtue of an Act of Parliament, "passed in the 38th year of the reign of his Majesty "King George the Third, intituled [*set forth the "title of this Act.*]

"So help me God."

Which oath any two of the said governors and trustees are hereby empowered and required to administer to the others.

Election of Governors on Death or Removal.

And be it further enacted, that whenever any one or more of the governors and trustees of the said school shall die or resign, or shall leave, and with his family reside out of the said county of Salop for 12 calendar months successively, or for the space of 12 calendar months shall refuse or neglect to act as a governor and trustee of the said school (unless rendered incapable by sickness, or some other reasonable cause, to be allowed by the other governors and trustees, or any five of them,) that then some other person (residing within the county of Salop aforesaid) shall be appointed to fill the room or place of him or them so dying or resigning, or leaving the said county, or refusing or neglecting to act as a governor and trustee, or governors and trustees as aforesaid, in the manner following; that is to say, that the said remaining governors and trustees, or any five or more of them, present at a meeting duly convened as herein-after mentioned, shall within the space of one month after such vacancy, nominate three persons eligible to fill such place, and shall send the names of the persons so nominated immediately to the mayor, aldermen, and assistants of the said town, by transmitting the same, with a paper signifying such nomination, to the mayor of

the said town, or to the town clerk of the said town, at his or their usual place of abode; and the said mayor, aldermen, and assistants shall, within the space of two months after the receipt of such names, elect one person out of the said three to fill up such vacant place; and in case the said mayor, aldermen, and assistants shall neglect, within the space of two months, to make such election, then the said remaining governors and trustees, or any five of them, may make such election out of the said three persons so nominated as aforesaid.

Governors not to occupy School Premises.

And be it further enacted, that no governor and trustee of the said school shall, on any account or pretence whatsoever, either directly or indirectly, rent or occupy any part of the said estates, tithes, lands, tenements, or hereditaments, now or hereafter belonging thereto, neither shall any governor and trustee be elected a master or usher of the said school, nor shall any governor and trustee, either directly or indirectly, hold any place of profit under this Act, and no master or usher of the said school shall, on any account or pretence whatever, be nominated or elected a governor thereof, nor shall any master or usher, either directly or indirectly, rent any part of, or purchase any lease or leases of the estates now or hereafter belonging to the said school; and also that no person whatever, being a tenant of the said estates, shall at any time hereafter be nominated or elected a governor, master, or usher of the said school.

Governor becoming possessed of a Lease to relinquish his Office.

And be it further enacted, that in case any governor and trustee of the said school, in his own name or in the name of any person or persons whomsoever, shall purchase, or shall by descent, devise, bequest, or any other ways or means, become possessed of or entitled to any lease or leases of the said estates, or any part thereof, now or hereafter belonging to the said school, then and in such case he and they shall be incapable of acting as a governor and trustee of the said school: and also in such case it shall and may be lawful for the other governors and trustees thereof for the time being, or any five of them, and also for the said mayor, aldermen, and assistants, to proceed to a new election, and to nominate and elect another fit person to be a governor and trustee of the said school, in the manner and form prescribed as last aforesaid, in the room of such governor and trustee so rendered incapable of acting.

Lands, &c. to be vested in Governors.

And be it further enacted, that all and singular the messuages, lands, tenements, tithes, school and school-houses, mines, minerals, rents, revenues, hereditaments, and all monies, securities, books, goods, matters and things, and all real and personal estates whatsoever now belonging to the said school (whether originally granted by the said letters patent, or by the said indenture or otherwise), yielding at present an annual rent or income of 900*l.* or thereabouts, shall be and remain vested in and settled upon and in the said governors and trustees of the said school and their successors, in trust for the benefit, maintenance, and support thereof; and that the said governors and trustees and their successors shall and may hold the same, and also all other the messuages, lands, rectories, vicarages, tithes, and other hereditaments whatsoever hereafter to be granted, released, or conveyed to the said governors and trustees, and their successors, in like trust for the benefit and maintenance of the said school, except the right of presentation, nomination, and appointment to those ecclesiastical benefices which are herein-after mentioned and declared to be in the mayor, aldermen, and assistants of the said town of Shrewsbury.

Governors may demise Lands.

And be it further enacted, that it shall be lawful for the governors and trustees of the said school for the time being, or any five of them, present at a meeting as herein-after mentioned, by indenture or indentures under their common seal, to grant, demise, or lease any part or parts of the said trust estates unto any person or persons who shall from time to time be willing to take and rent the same, provided in every such lease there be reserved and made payable the best and most improved rent or rents that (at the time of granting thereof considering the nature of the case) can be reasonably had or got for the same, without taking anything by way of fine, premium, or foregift; and provided also that the said respective lessees to whom such leases shall be so made, do immediately (upon or after the execution of the original lease by the said governors and trustees) seal, deliver, and duly execute counterparts of such leases respectively, and thereby enter into covenants to keep the said trust estates in good and sufficient tenantable repair and condition, and to surrender and deliver up to the governors and trustees of the said school for the time being, or any five of them as aforesaid, peaceable and quiet possession of the premises to be comprised therein respectively, in such condition as aforesaid, at the expiration or upon the determination of the term or terms in or by such lease or leases to be so demised, and such other covenants as the said governors and trustees, or any five of them as aforesaid, shall judge fit and require; and provided also, that in every such lease there be contained a condition of re-entry for non-payment of the rent or rents thereby reserved; but it shall not be lawful to or for the said governors and trustees of the said school to make any demise or lease, and they are hereby restrained from making any demise or lease, of any part or parts of the said trust estates, which now or shall from time to time hereafter be vested in them by virtue of the said letters patent, indenture, or this Act, or otherwise howsoever, for any term or terms whatsoever exceeding 21 years, to take place in possession and not in reversion.

No business to be done but at Meetings; Quarterly Meetings; Special Meetings; Majority to bind Minority; Mayor to be Chairman, and have casting Vote.

And be it further enacted, that no business in anywise relating to the said school shall be transacted or done, except at a meeting at which five governors and trustees at the least shall be present, which meeting shall be held in the library of the said school, or other fit place to be fixed upon by the said governors and trustees; and that four general quarterly meetings of the governors and trustees shall be held in pursuance of this Act in every year, at the times following, (that is to say), on the 5th of January, the 5th of April, the 5th of July, and the 10th of October, at the hour of eleven in the forenoon of each of the said days respectively; and that the first meeting of the said governors and trustees shall be held within one month next after the commencement of this Act; and that the said governors and trustees, or any three or more of them, shall and may, and are hereby empowered at any time or times as to them shall seem proper, to summon a special meeting of the said governors and trustees, of which six days notice shall be given under the hands of the governors and trustees requiring such special meeting, specifying the time for holding the same, such notice to be given to or left at the house or place of abode of every governor or trustee; and that at all meetings the acts and assents of the major part of the governors and trustees present, not being less in number than five, shall bind the whole, and be as good and valid as if all the governors and trustees had joined therein; and that at all meetings the mayor of the said town of Shrewsbury for the time being, if present, shall be chairman, but if absent a chairman for the day shall be elected out of the governors and trustees present; and in case of an equality of votes the chairman shall, besides his vote as governor and trustee, have the casting or decisive vote.

Appointment of Masters on a Vacancy.

And be it further enacted, that when and as often as any vacancy or vacancies shall happen, either by death, resignation, forfeiture, or otherwise, in the place or places of the first or second master of the said Free Grammar School, that then the mayor of the said town of Shrewsbury for the time being, shall notify the same by letter or otherwise, within 14 days, to the master and fellows of Saint John's College, in the University of Cambridge, which said master and fellows shall, within the space of two calendar months after such vacancy being so notified to them, proceed to the election of one other fit and apt person, being a graduate of the degree of bachelor of arts at least in the Universities of Cambridge or Oxford, and a member of the Church of England, and the best qualified in respect of morals, learning, and discretion, to fill and occupy such place of first or second schoolmaster as aforesaid, and the said master and fellows shall, previous to such election, take each and severally an oath to vote for such person only to fill the said place of first or second master of the said school as in his judgment shall seem the best qualified for such station; which said first master shall be also catechist and reader to the said school.

Masters to be approved of by the Bishop.

Provided always, that no head master or second master of the said school shall enter upon the duties of such office of head master or second master, until he shall have been approved of and licensed by the Lord Bishop of Lichfield and Coventry for the time being, and shall have received such approbation and licence under the hand and seal of the said bishop, which said approbation and licence the said mayor is hereby authorized and empowered to demand of the said master for inspection, before he shall be permitted to enter into such office; and if upon examination

or inquiry the said Bishop shall disapprove of such person so elected as aforesaid, either for want of morals, learning, or discretion, then and in such case the said Bishop may reject such person so nominated, appointed, and elected by the said college as aforesaid, which rejection the said Bishop shall notify in writing to the master and fellows of the said college, who shall, upon such rejection, proceed again in the same manner and form as aforesaid to a new election, in the room and place of such person so rejected; and it is hereby declared that no person shall be capable of serving any such office of head master or second master without such approbation and licence of the said Bishop as aforesaid.

Place of Head Master and Second Master to vacate Fellowship, &c.—Appointment of Usher to be in the Head Master.

Provided also, and be it further enacted and declared, that every such person so admitted in manner and form aforesaid to the place of head master or second master of the said school shall, within 12 calendar months after his being so admitted to such place, vacate any fellowship which he or they may hold or possess in either of the said Universities, and also shall vacate any other office, place, or preferment which he or they shall hold or be possessed of in either of the said Universities, or elsewhere, which shall require celibacy in the person who holds any such place, office, or preferment; provided likewise, that the nomination and appointment of such ushers of the said Free Grammar School as may hereafter be thought necessary, shall be, and are hereby declared to be in the head master.

Allowance of Salaries.

And be it further enacted, that it shall be lawful for the governors and trustees of the said school for the time being, or any five of them, from time to time (by and out of the rents and revenues arising from the said trust estates and possessions of the said school) to pay and allow to such head master, second master, and ushers respectively, such annual salaries or stipends as the said governors and trustees, or any five of them, shall in their discretion think meet, and from time to time to augment or increase the same, as they shall judge necessary, the salary of the head master of the said school for the time being, not to be less than one hundred pounds per annum as master, and twenty pounds per annum as catechist and reader (clear of all deductions), over and besides the use and occupation of a school house for such head master to reside in, free of all taxes whatsoever which shall or may be payable to government and repairs, and the salary of the said second master not to be less than eighty pounds per annum (clear of all deductions), over and besides the use and occupation of a school house to reside in, free of such Government taxes and repairs as last aforesaid; provided that the said masters shall, and they are hereby required to teach and instruct in the said school, such boys as are the legitimate sons of burgesses of the said town of Shrewsbury, gratis, and without any fee or reward whatsoever: And provided also, that no increase of salaries or stipends, beyond those above specified, shall be made by the said governors and trustees to the said first or second master; and that no increase be made to the said ushers, or any or either of them, without the previous consent and approbation of the Lord Bishop of Lichfield and Coventry for the time being, signified under his hand.

Allowances to dismissed or disabled Masters.

And be it further enacted, that in case any of the present masters of the said school, or in case any of the masters and ushers to be appointed after the passing of this Act shall resign, or be removed or discharged for incapacity, or on account of age or infirmity of body or mind, or any other cause, then it shall be lawful for the governors and trustees of the said school for the time being, or any five of them, with the consent of the Lord Bishop of Lichfield and Coventry, and his successors, signified by writing under his or their hand or hands, from time to time at their discretion, to allow out of the said trust estates to such masters and ushers respectively, such yearly or other sums of money as to the said governors and trustees, or any five of them, and the said Lord Bishop, shall seem reasonable.

Head Master to have the Management of School.

And be it further enacted, that the second master and ushers of the said school for the time being shall, from time to time, be under the direction and control of the head master thereof, in the ways and methods of teaching, instructing, and ordering of all such children and youth as shall be from time to time put under the care, instruction, and management of the said second master or ushers respectively, for the time being, and such head master is hereby declared to have full power and authority to order, direct, and act in such matters as he may think fit.

Directing how the Masters and Ushers are to be discharged in case of Immorality, Neglect of Duty, or any other Cause of Complaint.

And be it further enacted, that when and as often as, in the judgment of the governors and trustees of the said school for the time being, it shall be thought proper and necessary to remove or discharge the head master or second master of the said school, by reason of immorality, neglect of duty, incapacity, or other reasonable cause of complaint, then the said governors and trustees, or the major part of them, shall exhibit a complaint in writing to the Lord Bishop of Lichfield and Coventry for the time being, who is hereby authorized and required to cite as well the said complainants, as the head or second master against whom such complaint shall be made, to appear before him personally at such time and place as to him shall seem meet, and by examination of witnesses upon oath (which oath the said Lord Bishop is hereby empowered to administer), and otherwise to inquire into the truth of the complaint; and the said Lord Bishop is hereby further empowered, after such inquiry by him made, summarily to decide upon the matter, and to decrée the avoidance of the office and place of the said head or second master, if there shall seem to him sufficient cause for his removal, and to revoke, by instrument under his episcopal seal, any licence held by the said head or second master; and the said Lord Bishop shall cause the said avoidance and revocation to be forthwith sent to the mayor of the said town of Shrewsbury for the time being, who shall notify the same, by letter or otherwise, within fourteen days, to the master and fellows of Saint John's College aforesaid, who shall, within two calendar months after the said notification, proceed to the election of a new head master or second master to fill up such vacancy, in the manner herein-before directed: Provided that it shall and may be lawful for the said head master to displace, remove, or discharge any or either of the said ushers, on account of immorality, neglect of duty, incapacity, or other reasonable cause; and no licence which such ushers might have before obtained to teach in such school shall be of any avail whatever after such removal to authorize him to teach in the said school.

For obtaining Possession of Premises from displaced Masters.

And be it further enacted, that in case the head master, second master, or ushers of the said school, shall at any time or times hereafter be discharged for any of the causes, and in manner herein-before prescribed and mentioned, and at the time of such discharge he or they, or any person or persons whomsoever by his or their authority, privity, or permission, shall be in the possession of, inhabit, or occupy any of the school-houses or school-rooms, or any other room or rooms now or hereafter to be erected or used as an addition or additions to the said school, or which is, are, or shall be occupied therewith, or shall be in the possession of, inhabit, or occupy any of the messuages or dwelling houses, buildings and premises, now or hereafter belonging to the said school, and which shall be the property of the governors and trustees thereof for the time being, and such head master, second master, or ushers, or any one or more of them, shall refuse or neglect to deliver up possession of the said premises respectively to the said governors and trustees, or to such person or persons as they, or any five of them, shall appoint and direct to receive the same (three calendar months notice to quit the same premises having been first given to the said head master, second master, or ushers so discharged or removed as aforesaid, or left at his or their then or last place of abode, under the hands of the said governors and trustees for the time being, or any five of them, or under the hand of their bailiff for the time being), then it shall be lawful for any justice of the peace for the town and liberties of Shrewsbury aforesaid, or county of Salop, upon the complaint and at the request of the said governors and trustees, or any five of them, or their bailiff for the time being, by warrant under his hand and seal, to order a constable or other peace officer, with such assistance as shall be necessary, to enter into and upon such messuages, dwelling houses, buildings, school houses, and school-rooms and premises (of which possession shall be withheld) in the day-time, and to remove the person and persons who shall be found therein, together with his, her, or their goods out of the same, and to put the governors and trustees of the said school for the time being into the possession thereof.

Head Masters not to let their Houses.

And be it further enacted, that no head master, second master, or usher shall, at any time during their continuance in their said office, set, let, or otherwise dispose of the said school-houses or school-rooms which he or they shall be put in possession of by the said governors and trustees, as such master or usher as aforesaid, to any person or persons

whomsoever, for any length of time whatsoever; and if such head master, second master, or usher, or any or either of them, shall cease to reside in such school-houses belonging to the said school, and of which he shall have possession as aforesaid, by quitting the same for the space of three calendar months at any one time together, in any one year, without the previous consent of the said governors and trustees for the time being, or any five of them, signified under their hands respectively, that then and in every such case such head master, second master, or usher, shall lose, forfeit, and vacate his said office of such master or usher respectively, and all rights, profits, and emoluments whatsoever belonging to the same.

Appointment of Bailiff, Receiver, and Treasurer.

And be it further enacted, that it shall and may be lawful to and for the said governors and trustees of the said school for the time being, or any five of them, from time to time, by writing under their common seal, to appoint a proper person to be and act as their bailiff, receiver, and treasurer, and such bailiff, receiver, and treasurer shall be and is hereby required, from time to time, to enter all the proceedings of the said governors and trustees, or any of them, in meetings assembled, in a book or books to be kept for that purpose, and (out of the rents and revenues arising from the said trust estates) the said governors and trustees shall pay or cause to be paid to such bailiff, receiver, and treasurer, such an yearly salary or other allowance for and in consideration of his employment, as the governors and trustees for the time being shall judge reasonable, not exceeding the sum of one shilling in the pound of the clear yearly rents and interest of the said trust estate and monies which such bailiff, receiver, and treasurer shall receive, and so as the salaries of the head master or second master of the said school be not thereby reduced to less than as before mentioned; and that it shall and may be lawful for the governors and trustees of the said school for the time being, or any five of them, to take such security as they shall think proper from such bailiff, receiver, and treasurer for the due and faithful execution of his office, and also from time to time, at their free will and pleasure, to displace and remove such bailiff, receiver, and treasurer, and appoint another in the room and stead of such bailiff, receiver, and treasurer as shall be so displaced or removed, or who shall die, or may discontinue any such office or offices, when the said governors and trustees, or their successors for the time being, shall think proper.

Empowering the Governors to apply the Revenues of the Schools.

And be it further enacted, that it shall and may be lawful to and for the said governors and trustees of the said schoo for the time being, or any five of them, to lay out, expend, and employ so much and such part of the rents and profits of the said trust estates, monies, and revenues, as they shall from time to time deem necessary or expedient for the support and improvement of the said school, school houses, and the estate and revenues thereof: Provided always, that after the payment of all taxes, salaries, scholarships, exhibitions, charges, and repairs of the said school, school houses, library, and of the lodgings of the school masters, and of all other things belonging to the said school, and of all expenses in riding and travelling about the necessary business of the said school, and of all charges to be sustained by reason of any suits in law which shall happen for and concerning any of the possessions and other the premises given and assured to and for the maintenance of the said school, and also, after the payment of all such other charges and expenses as shall be from time to time thought necessary or convenient by the said governors and trustees, and after such a sum as the said governors and trustees shall deem necessary shall have been retained in the hands of the treasurer for the discharge of the current expenses of the trust, then and in such case the whole of the surplus of the said revenues shall be employed in founding, creating, and maintaining exhibitions in the Universities of Cambridge and Oxford, or either of them, in manner herein-after mentioned.

Accounts to be laid before the Bishop quarterly.

And be it further enacted, that four times in every year, that is to say, on the 5th day of January, the 5th day of April, the 5th day of July, and the 10th day of October, there shall be made out and printed an account of the whole of the receipts, arrears, debts, bills outstanding, and also of all the expenses, and of the surplus of the whole of the said revenues, and twelve printed copies thereof shall be lodged with the corporation, and shall at all times be open to the inspection of the mayor, aldermen, and assistants of the said town of Shrewsbury, and six printed copies thereof shall be transmitted to the master and fellows of Saint John aforesaid for their information.

Governors empowered to make Byelaws, &c.

And be it further enacted, that it shall and may be lawful to and for the governors and trustees of the said school, and their successors, or any five of them, by and with the consent and approbation of the Lord Bishop of Lichfield and Coventry for the time being, from time to time to make fit and wholesome statutes and ordinances, in writing, touching and concerning the ordering and directing of the head master, second master, ushers, and scholars of the said school for the time being, and also touching and concerning the stipends and salaries of the said head master, second master, and ushers to be appointed to the same school, and the ordering and governing, preservation, and disposition of the estates, rents, monies, and revenues, and sustaining of the same school, and touching and concerning all other matters whatsoever relating thereto, not otherwise regulated and provided for by this Act; all which statutes and ordinances shall be binding to, and upon, and observed by all persons: Provided always, that the said governors and trustees shall not make or enact any statutes or ordinances which may in any way tend to alter or defeat the original institution of the said school as a free grammar school as aforesaid.

Application of Surplus of the Revenue of the School Estates.

And be it further enacted, that the surplus of the said estates and revenue of the said school, which shall remain over and above the different payments, charges, expenses, matters, and things before directed and authorized to be made and done, shall be by the said governors and trustees applied and appropriated towards the founding, creating, and maintaining of one or more exhibition or exhibitions in either of the said Universities of Oxford and Cambridge, as the said governors and trustees, and the said Lord Bishop of Lichfield and Coventry for the time being, shall think fit, for such scholars as shall have been educated and brought up in the said free grammar school, of the description herein-after mentioned; and such surplus shall, when and as often as the same shall amount to 100*l.* or upwards, be laid out in the purchase of lands, tenements, and hereditaments, or in the purchase of stock in any of the different funds created by any Act or Acts of Parliament, or in such other way or manner as the said governors and trustees, and the said Lord Bishop of Lichfield and Coventry for the time being, shall think best; and the rents and produce of the said lands, tenements, and hereditaments, and the interest of the said stock so to be purchased as aforesaid, shall be also applied and appropriated to the aforesaid purpose, and shall, as often as and when the same shall amount to the sum of 100*l.*, be also laid out in the same manner as before, in addition to the said other principal sum or sums of 100*l.*, and so toties quoties, until the yearly rents, produce, or interest of the said different sums so joined and added as aforesaid, shall amount to such sum as shall be sufficient, in the judgment of the said governors and trustees, and the said Lord Bishop of Lichfield and Coventry for the time being, to support and maintain one exhibitioner in either of the Universities as aforesaid; and after the founding and creating of one such exhibition, then the said surplus shall in like manner be applied and appropriated towards the founding of another such exhibition, and so toties quoties, unless the said governors and trustees, and the said Lord Bishop for the time being shall, at any future period, see just and meet occasion to increase or add to the salaries or stipends of the then scholars or exhibitioners, or any or either of them; or if they shall see just and meet occasion at any time to add to or augment the stipends and salaries of the said vicar of Chirbury, and curates of Saint Mary's, and of Astley and Clive, or any or either of them, then and in such case or cases it shall and may be lawful for the said governors and trustees, by and with the consent of the Lord Bishop of Lichfield and Coventry for the time being, to apply such surplus money, or any part thereof, to such purposes, and in such ways and means as to the said governors and trustees, and the said Lord Bishop of Lichfield and Coventry for the time being, shall seem best: Provided always, that no such exhibition shall endure for any greater length of time than five years, and that the same shall, at the expiration of such time, cease and determine, and be no longer paid to any such exhibitioner, and a new election shall be had of some other exhibitioner in manner herein-after mentioned.

Choice and Election of Exhibitioners.—Exhibitions.

And be it further enacted, that the election and choice of the said exhibitioners, as often as there shall be a vacancy, or as often as a new exhibition shall be created as aforesaid,

shall be in the said governors and trustees, and that every such election shall be had as follows; first, of such scholars of the said school as have been or shall be born in the said town of Shrewsbury or in the suburbs thereof, or in the Abbey Foregate adjoining thereto, being the legitimate sons of burgesses of the same town, if they be found by the said governors and trustees meet and apt for the same; and for default of such, then of such scholars as have been or shall be born in the parish of Chirbury, within the said county of Salop; and for default of such, then the choice to be of such scholars as have been or shall be born within the said county; but that no person shall be eligible to such exhibition, unless he shall have duly attended the said school for the space of two years immediately preceding his going to any college in either of the said Universities, and shall have obtained from the master of the said school a certificate of such attendance under his hand, and also that such scholar so offering himself a candidate for such exhibition is duly qualified in respect to learning, and of good morals and behaviour; and in case there be no such scholars of the description aforesaid in the said school, when any vacancy of an exhibition shall happen, or in case the person offering himself a candidate for the same shall, in the judgment of the said governors and trustees, be unfit and ineligible, either for want of learning, or for any other cause or defect, to have or enjoy such exhibition, then and in such case the money which would otherwise have been applied and appropriated to the use of such exhibitioner, shall be applied to and appropriated, in the way and manner herein-before directed, towards increasing the fund for founding and creating a new exhibition, and so toties quoties; and also towards increasing the stipends or salaries of the said vicar of Chirbury, and curates of Saint Mary, Astley, and Clive as aforesaid.

Not to diminish Stipends now paid to Scholars or Exhibitioners at St. John's College.—Governors and Trustees, with Consent of Bishop, may augment Exhibitioners Stipends.

And be it further enacted, that all the annual stipends, payments, or sums of money which are now paid out of the rents and revenues of the said school estates for the better maintenance and support of scholars or exhibitioners from the said school, unto or for the use and benefit of such scholars or exhibitioners, at the said college of Saint John the Evangelist in the University of Cambridge, under the said ordinances of the said Thomas Ashton, shall not at any time hereafter be lessened or diminished, but shall at all times continue to be paid by the said governors and trustees to the same amount at the least as they are at present paid; and that it shall and may be lawful for the said governors and trustees, with the consent of the Lord Bishop of Lichfield and Coventry for the time being, from time to time, out of such surplus, to augment or increase the salary or stipend of any such scholar or exhibitioner, which is now or shall be at the said college of Saint John the Evangelist, under the said ordinances of the said Thomas Ashton.

No Ordinance to be made, altered, or repealed, unless Five Governors be present.

Provided always, and be it further enacted, that no statutes or ordinances shall be made, amended, altered, or repealed, unless a motion for that purpose shall be made and entered in the books of the governors and trustees, and unless a subsequent meeting shall be called for the express purpose of considering such motion, and six days notice of the time and purpose for holding such meeting, exclusive of the day of the delivery of such notice, and the day of such meeting, shall be given to or left at the house or place of abode of every governor and trustee, nor unless five of the governors and trustees shall be present.

Mayor, &c. to present to Chirbury, St. Mary's, Astley, and Clive.

And be it further enacted, that the right of nomination, appointment, and presentation to the respective advowsons, vicarages, curacies, and all other ecclesiastical benefices, and other ecclesiastical offices belonging and appertaining to the said school, except the office of catechist and reader, shall be and is hereby declared to be in the mayor, aldermen, and assistants of the said town of Shrewsbury, and their successors for the time being for ever, and they shall and are hereby empowered upon any future vacancy, either in the said vicarage of Chirbury, curacies of Saint Mary's, Astley, or Clive, or any other ecclesiastical endowment, benefice, or other office belonging as aforesaid to the said school (except that of catechist and reader, which is always to be holden by the head master of the said school as before provided,) to nominate, appoint, or present, as the case may require, a fit and proper person (duly qualified according to law) to hold, possess, and enjoy any or either of the said benefices or other offices before mentioned; and the said advowson or right of presentation to the said vicarage of Chirbury, and the nomination to the respective curacies of Saint Mary's, Clive, and Astley, and to other ecclesiastical offices, except as before excepted, is and are hereby vested in the said mayor, aldermen, and assistants, and their successors for ever: Provided always, that in the presentation, nomination, or appointment to the said curacy of Saint Mary's, Clive, and Astley, such person shall be preferred (*cæteris paribus*) who shall have been brought up at the said school, by having been there at least two years immediately preceding his going to either of the Universities of Oxford or Cambridge, and who shall be a graduate of one of the said universities, and also the son of a burgess of the said town of Shrewsbury; and if there be no burgess's son of this description, then a preference shall be given in like manner to such person of the above description born in the parish of Chirbury, in the said county of Salop: And provided also, that in the presentation, nomination, or appointment to the said cure or vicarage of Chirbury, such person shall be preferred (*cæteris paribus*) who shall have been brought up in the said school as aforesaid, and a graduate of one or other of the said two universities, and born within the said parish of Chirbury, except that it shall and may be lawful for the said mayor, aldermen, and assistants to give or bestow any or either of the said livings or benefices upon either of the masters of the said school, after he shall have resigned or vacated the place of head or second master, notwithstanding any such claim or preference as last aforesaid; and such head or second master shall be capable of receiving, holding, and possessing such livings or benefices equally the same as if he had been of the description herein-before mentioned.

Expenses of Act to be defrayed out of Revenues of the School.

And be it further enacted, that all the costs, charges, and expenses incidental to and attending the obtaining and passing of this Act, shall be paid and defrayed out of the estates and revenues belonging to the said school.

Public Act.

And be it further enacted, that this Act shall be deemed, taken, and adjudged a public Act, and be judicially taken notice of as such by all judges, justices of the peace, and other persons whomsoever, without specially pleading the same.

General Saving.

Saving always to the King's most Excellent Majesty, his heirs and successors, and to the Lord High Chancellor, or the Lord Keeper, or the Lords Commissioners of the Great Seal of Great Britain for the time being, as visitor of all royal foundations, and to all and every other person and persons whomsoever (other than and except those persons whose interests are meant to be affected by this Act), all such estate, right, title, interest, claim, and demand, of, in, to, or out of the premises hereby vested in the said governors and trustees hereby appointed, and their successors, as he, they, or any of them had before the passing of this Act, or could or might have had in case this Act had not been made.

V. Schedule to the Report of John Elijah Blunt, Esq., one of the Masters of the Court of Chancery, (containing a Scheme for the Management of the Free Grammar School of King Edward the Sixth, at Shrewsbury) amended and confirmed by Order of Court, dated 1st August 1853.

What the Scholars are to be taught.

That the scholars in the said grammar school be carefully and diligently taught by the head master, second master, and ushers thereof, under the direction of the said head master, in the Holy Scriptures, the Church catechism, the liturgy, doctrine, and discipline of the Church of England; and that they be also carefully and diligently taught by the said masters and ushers, and by the assistants who from time to time may be employed in the said school, in the Greek, Latin, English, and French languages, reading, writing, and grammar, in ancient and modern history, sacred as well as profane, and geography, in arithmetic and mathematics, and also in such other modern languages, arts, and sciences as the said governors and trustees, with the consent and approbation of the Lord Bishop of Lichfield for the time being shall think proper and direct.

Admission of Scholars (as amended by the Order).

That no boy shall be admitted into the said grammar school under the age of eight years, and who shall not,

previously thereto, be able to write and read English; and the head master of the said school, or some person to be from time to time appointed by him for that purpose, shall examine every boy who shall be offered for admission; and if on such examination it shall appear that such boy has not attained to the said age, or is not able to write and read as aforesaid, he shall not be admitted to the said school. And no boy hereafter to be admitted shall continue in the said school after the end of the half-year which shall expire next after he shall have attained his age of 20 years.

Sons of Burgesses.

That such boys as are the legitimate sons of burgesses of the said town of Shrewsbury, within the meaning of the Act of Parliament for the government and regulation of the said school, and who are as such entitled to be taught therein without fee or reward, shall be admitted into the same without being required to make any payment in respect of such admission; and that no payment in respect of any such boy shall at any time be required or taken by any master or usher of the said school for instruction in any matter which may be prescribed to be taught in the said school.

Scholars not Sons of Burgesses (as amended by the Order).

That any boys, other than such as are the sons of such burgesses as aforesaid, may be admitted into the said school, subject to such other regulations not inconsistent with this scheme, as shall from time to time be made by the said governors and trustees, with the consent and approbation of the said Lord Bishop of Lichfield.

Admission Fees.

That for every boy who shall be hereafter admitted into and continued in the said school, and who shall not be a son of such burgess and entitled as aforesaid, there shall be paid an admission fee of two guineas, and the yearly sum of 15 guineas, such yearly sum to include all charges for instruction in the several matters prescribed to be taught in the said school. That all such admission fees shall be paid to the head master immediately before the admission of the boy for whom the said sum is so payable, and all such yearly sums shall be paid to and received by such head master during the continuance of such boys in the said school by equal half-yearly payments to be made in advance; and one-sixth part of the amount so received for such yearly sums shall be paid by the said head master to the second master for his own benefit; and the residue thereof, and the said admission fees, shall be retained by the said head master, and applied by him for the benefit of himself and of the ushers and assistants, or of any or either of them, in such manner and in such proportions as the said head master shall direct.

Alteration of Admission Fees (as amended by the Order).

That the said governors and trustees and their successors, or any five of them, with the consent and approbation of the Lord Bishop of Lichfield, may, from time to time, make such regulations as shall seem fit for an increase or diminution, uniform as to all boys liable thereto, of the amount of the admission fees and yearly sums respectively herein-before directed to be paid, and for varying the application of the amount received for the same, provided that the amount so received be applied for the benefit of the masters, ushers, and assistants in the school, or of some or one of them.

Boarders.

That the head master and second master, and with the consent of the head master any other master of the said school, for the time being, shall respectively be at liberty, subject to the regulations to be from time to time made by the said governors and trustees, with the consent and approbation of the said Lord Bishop, to take boys as boarders into their respective houses, or into any other house or houses under their respective immediate inspection and control, and to educate such boys in the said school, and to receive from the friends of such boarders payment in respect of their board and lodging, such friends paying also the admission fees and annual sums herein-before in that behalf mentioned. But that no preference whatever shall be shown to such boarders over other scholars.

Library, &c.

That the library of the said school shall be properly kept up by the governors and trustees for the use of the masters and boys; and for that purpose the said governors and trustees shall yearly and every year set apart out of the income of the said charity, such sum of money, not exceeding 70*l.* in any one year, as in their discretion they shall think fit, and shall apply the same in the purchase and repair of such books, mathematical and philosophical and other instruments, and other articles for instruction, as may be desirable; and shall also allow out of the said income, yearly and every year, such sum as they shall think proper, not exceeding in any one year 50*l.*, for rewards and prizes, to be paid or applied by the head master to or for the benefit of such one or more than one such meritorious and deserving scholar educated in the said school, in such manner, and if more than one, in such proportions, as he shall think proper.

Scholar misconducting himself.

That any scholar who shall misconduct himself, either at the school or elsewhere, be punished at the discretion of the head master by dismissal from the school or otherwise, and that the said governors and trustees may in any case in which they shall think proper so to do, direct that any scholar so misconducting himself be formally and publicly expelled; provided that in all cases of dismissal or expulsion, the same shall be subject to an appeal to the said Lord Bishop of Lichfield, whose decision thereon shall be final.

Provided also, that if the said head master shall at any time be of opinion that a special meeting of the said governors and trustees should be held for the purpose of deciding as to any such formal and public expulsion of any scholar, it shall be lawful for the said head master to notify such opinion in writing to the bailiff of the said school, and the said bailiff shall forthwith communicate the same to any three or more of the said governors and trustees, and such last-mentioned governors and trustees or any three of them shall forthwith, upon receiving such communication, summon in the manner directed by the tenth section of the Act of Parliament for the government and regulation of the said school, a special meeting of the said governors and trustees to be held for such purpose, and the same shall be held accordingly.

Registry of Scholars.

That the head master keep a correct registry of the scholars in the said school, distinguishing boarders from such as are not boarders, and such as are entitled as aforesaid to gratuitous education from such as are not so entitled, and also showing the daily attendance of the respective scholars, and that a report be transmitted twice at least in every year to the parents or guardians respectively of each scholar, showing his progress and general conduct during the half-year then preceding.

Examination of Scholars.

That the scholars of the said school shall be examined yearly, at such times and by such persons or person as the Lord Bishop of Lichfield shall appoint, and that the said examiners or examiner shall ascertain the proficiency of such scholars in learning, and especially whether they are respectively well grounded and instructed in the principles and doctrines of the Christian religion, and shall particularly examine all such scholars as shall be candidates for exhibitions and shall have obtained such certificate of attendance in the said school, and of good morals and behaviour as required in that behalf by the said Act of Parliament for the regulation of the said school. And the said examiners or examiner shall report to the said Lord Bishop and to the said governors and trustees the result of such examination, and shall report the names of all such of the said candidates as they or he shall deem eligible for an exhibition, and shall class the names of such eligible candidates according to their respective abilities and acquirements.

Election of Exhibitioners.

That of the candidates so classed the said governors and trustees shall forthwith after receiving such report, elect so many as shall be necessary to fill the exhibitions then to be filled up according to the order of preference in respect of birth herein-after mentioned, that is to say :—

First, such as shall have been born in the town of Shrewsbury, or in the suburbs thereof, or in the Abbey Foregate adjoining thereto, being the legitimate son or sons of a burgess or burgesses of the same town within the meaning of the said Act of Parliament for the regulation of the said school.

Second, such as shall have been born in the parish of Chirbury within the said county of Salop.

Third, such as shall have been born in the said county of Salop.

Provided always, that in case any two or more of such candidates as are herein-before firstly, secondly, or thirdly mentioned, shall be entitled to the same preference in respect of birth, then the election shall be made between them according to the order in which they shall have been placed in the said class.

Fourth, for default of such candidates so born and

deemed eligible as aforesaid, then the said governors and trustees shall elect so many of such candidates as shall be necessary as aforesaid, without reference to the place of their birth, but according to the order in which they shall have been classed by the said examiners or examiner as aforesaid.

And in case any two or more of such candidates who shall be entitled to an equal preference in respect of birth, or of whom neither shall be entitled to any such preference, shall be classed by the said examiner as equal in attainments, then the said governors and trustees shall in making choice between such last-mentioned candidates elect such one or more as shall appear to them, the said governors and trustees, to be from pecuniary circumstances or general character or otherwise best entitled to the benefit of such election. And in case there shall be no person reported eligible for an exhibition, then the money which would otherwise have been applicable to the use of such exhibition shall be applied in the manner in that behalf directed by the last-mentioned Act of Parliament.

What Exhibitions shall be open to either University.

That all exhibitions other than the two which were founded in the year 1656 and the four which were founded afterwards, but before the passing of the Act of Parliament for the better government and regulation of the said school, which exhibitions respectively have been heretofore limited to St. John's College, Cambridge, shall be open to any College or Hall in either of the Universities of Oxford or Cambridge.

Regulations as to Exhibitions.

That the rules at present existing respecting exhibitions shall continue in force so far as they regard exhibitions heretofore granted and not now vacant until such exhibitions respectively become vacant, and that all elections to exhibitions now vacant, or which shall hereafter become vacant, shall be made according to the following regulations, that is to say :—

That each of the said exhibitions shall be of the clear yearly value of 50*l.*, and may be held for such time not exceeding four years, to be computed from the commencement of the university Michaelmas term next after the election of such exhibition, as the holder thereof shall duly and bonâ fide keep such residence as the college to which he shall belong shall require. And in case any of the exhibitions shall become vacant by death or otherwise before the expiration of such four years, the said governors and trustees may, if they shall think fit, give the exhibition so vacant for the residue of the said four years either to any scholar then member of the said school who shall have been reported as aforesaid eligible for an exhibition, although he may have failed in obtaining the same and who shall be going to college, or to any scholar formerly member of the said school, and reported to be eligible as aforesaid, who shall be then a resident member of one of the said universities and under the degree of bachelor of arts, preference being always given in the order herein-before in that behalf mentioned.

That each exhibition shall be paid by the treasurer out of the income of the estates of the said school by equal half-yearly payments, on the 24th day of June, and the 25th day of December in each and every year, upon the exhibitioner entitled thereto producing a certificate under the hand of the head or governor of his college or hall of the due residence and general good conduct of such exhibitioner, and in case any such exhibitioner shall vacate his exhibition by resignation, death, or otherwise than by the efflux of time, a proportionate part of his exhibition for the then current half-year, calculated to the day of such vacancy, shall be paid to such exhibitioner, or as the case may be to his personal representative, or if within six calendar months next after the decease of any such exhibitioner there shall be no such personal representative, then to his parent or guardian, upon the production of a like certificate of the due residence and good conduct of such exhibitioner for the time for which such proportionate part shall be claimed.

That no exhibition from the funds of the said school be awarded to or held by any person who shall hold any other exhibition or exhibitions granted to him as scholar of the said school, if such other exhibition or exhibitions shall exceed 35*l.* per annum.

Head Master or Second Master not to hold other Employments without Permission (as amended by the Order).

That no head master or second master hereafter to be appointed shall at any time during his tenure of office take upon himself to hold, receive, or exercise any cure or employment whatsoever, either ecclesiastical or civil, without the express assent in writing of the said governors and trustees, nor continue to exercise any such cure or employment for more than three calendar months next after he shall have been required in writing by such governors and trustees to cease to exercise the same. And in case they or either of them shall without such permission first had and obtained, undertake any such cure or employment, or shall continue any such cure or employment for more than three calendar months next after having been so required as aforesaid to cease to exercise the same, they or he so undertaking or continuing such cure or employment shall be deemed guilty of neglect of duty in his office of master, and shall be subject to be removed from such office accordingly.

Application of Rents, &c.

That the annual and other rents, issues, and profits of the real and personal estates vested in the said governors and trustees shall be applied by the said governors and trustees in manner following, that is to say :—

First, in repairing and keeping in repair the said school and school-house and chapel, houses, buildings, and appurtenances belonging to the same, and in payment of the costs, charges, and expenses of or incident to the management and repairs and maintenance of the estates and premises belonging to the said governors and trustees for the said school, including therein all rates and taxes of such houses and buildings, and a salary to the person who for the time being shall be the bailiff, receiver, and treasurer of the said school, not exceeding the sum in that behalf specified in the said Act of Parliament for the regulation of the said school, and the salaries and wages of such servants and other persons as may be necessarily employed in the due management of the said estates and premises.

Stipends of Clergy.

Secondly, in payment to the curate of the parish of Saint Mary in Shrewsbury aforesaid of the yearly sum of 300*l.*; to the vicar of the vicarage of Chirbury, of the yearly sum of 200*l.*, and the further sum of 80*l.*, to be applied by him towards providing a curate for the better discharge of the duties of the said parish.

To the curate of the curacy of Clive the yearly sum of 90*l.*

To the curate of the curacy of Astley, the yearly sum of 70*l.*

Provided always, that the said governors and trustees, for the time being, or any five of them, may, with the consent and approbation of the Lord Bishop of Lichfield, from time to time, add to or diminish the said several sums, or any or either of them, as occasion may require.

Thirdly, in payment of such sum or sums of money, by way of subscription or otherwise, for or towards the establishment or maintenance in each of the said several parishes and places of St. Mary, Chirbury, Clive, and Astley, and in the parish of St. Chad in Shrewsbury, of one or more school or schools for the education of the children of poor persons in such parishes and places respectively, according to the principles of the Church of England, as the said governors and trustees, with the consent and approbation of the said Lord Bishop, shall think fit, not exceeding the sum of 15*l.* in any one year in respect of either of the said several parishes or places of St. Mary, Chirbury, and St. Chad, respectively, and not exceeding the sum of 5*l.* in any one year in respect of either of the said places of Clive or Astley respectively.

Salaries of Masters.

Fourthly, in payment to the head master of the said school of the yearly sum of 425*l.* as such head master, including therein an allowance of 100*l.* for mathematical instruction, and of the further sum of 40*l.* as catechist and reader to the said school.

And to the second master the yearly sum of 200*l.*

To the usher or third master the yearly sum of 100*l.*

To the French and German master the yearly sum of 50*l.*

To the accidence master, who shall also teach writing and arithmetic, the sum of 50*l.*

To such other masters, ushers, or assistants, as the said governors and trustees or any five of them shall from time to time, with the consent and approbation of the said Lord Bishop, deem necessary or desirable, such sum or sums of money as the said governors and trustees, with such consent and approbation as aforesaid, shall think fit.

Provided always, that the said governors and trustees for the time being, or any five of them, may from time to time, with the consent and approbation of the said Lord Bishop, and subject to the provisions made by the said Act of Parliament for the regulation of the said school, add to, diminish, or vary the said several sums hereby directed to be paid to the said several masters, ushers, and assistants, respectively, or any or either of them, as occasion may

require, and may also from time to time, with such consent and approbation and subject as aforesaid, add to or diminish the number of masters, ushers, and assistants respectively employed in the said school.

Payment of an Examiner.

Fifthly, in payment to such persons or person as shall be appointed as aforesaid to examine the said school of such sum as the said governors and trustees shall think proper, not exceeding the sum of 15*l.* 15*s.* for each such examiner, which sum shall be taken to include his travelling and all other expenses.

Sixthly, in payment of the several exhibitions for the time being payable.

Library, &c.

Seventhly, in providing books, instruments, and articles herein-before mentioned or referred to, for the use of the library of the said school, and for rewards and prizes as aforesaid.

Playground.

Eighthly, in providing and paying rent and incidental charges for a suitable piece of land, to be used as a playground for all the scholars in the said school, until a proper piece of land shall have been purchased as herein-before provided for such purpose.

Reserved Fund.

Ninthly, in providing and keeping up a reserved fund not exceeding the sum of 5,000*l.*, to be applied from time to time under the direction of the Court of Chancery, as occasion may require, for repairs and other expenses affecting the buildings or estates of the said school.

Accounts to be prepared Annually.

That the accounts of the said Governors and Trustees of the said school be made up, printed, and rendered as heretofore, once only in each year, and at the termination thereof.
